

Fully Connected Social Health In An Age Of Overload

In a world of disruptive change, uncertainty is the buzzword on everyone's lips. Disruptive change can throw everything into chaos unless leaders and teams have the skills to lead confidently through it. How do you lead complex change without burning out, disconnecting or losing your team? Welcome to the age of Leading Through Uncertainty, where emotional responses to challenging situations are part of the human experience. Drawing on numerous interviews with leaders from all walks of life demonstrating leadership in action, this new edition of the classic book on leadership and uncertainty has been revised and updated for the post-pandemic age. It explores these fundamental questions: How do you lead confidently and competently in uncertainty? How do you create human connection in a performance-driven culture? How do you adapt rapidly to technological advances and disruptive change without losing yourself or your team in the process? JUDE JENNISON is a leadership and team coach, recognized thought leader, international speaker and bestselling author, who specializes in developing leaders and teams through disruptive change. She combines 17 years' senior leadership experience in IBM with executive leadership, coaching and team development skills, as well as the pioneering approach of working with a herd of horses to help leaders become more confident in leading through the uncertainty of our time.

"An interactive and empowering book" to help African American men and women create a new vision of better health and navigate the health care system (BET.com). According to the federal Office of Minority Health, African Americans "are affected by serious diseases and health conditions at far greater rates than other Americans." In fact, African Americans suffer an estimated 85,000 excess deaths every year from diseases we know how to prevent: heart disease, stroke, cancer, high blood pressure, and diabetes. In this important and accessible book, Dr. Michelle Gourdine provides African Americans with the knowledge and guidance they need to take charge of their wellbeing. Reclaiming Our Health begins with an overview of the primary health concerns facing African Americans and explains who is at greatest risk of illness. Expanding on her career and life experiences as an African American physician, Dr. Gourdine presents key insights into the ways African American culture shapes health choices—how beliefs, traditions, and values can influence eating choices, exercise habits, and even the decision to seek medical attention. She translates extensive research into practical information and presents readers with concrete steps for achieving a healthier lifestyle, as well as strategies for navigating the health-care system. This interactive guide with illustrations is a vital resource for every African American on how to live a healthier and more empowered life, and an indispensable handbook for health-care providers, policy makers, and others working to close the health gap among people of color. Says Gourdine, "I wrote this book to empower our community to solve our own health problems and save our own lives." In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Shortlisted for the CMI's Management Book of the Year Award 2018 and the Business Book Awards 2018 Twenty-five years after the arrival of the Internet, we are drowning in data and deadlines. Humans and machines are in fully connected overdrive - and starting to become entwined as never before. Truly, it is an Age of Overload. We can never have imagined that absorbing so much information while trying to maintain a healthy balance in our personal and professional lives could feel so complex, dissatisfying and unproductive. Something is missing. That something, Julia Hobsbawm argues in this ground-breaking book, is Social Health, a new blueprint for modern connectedness. She begins with the premise that much of what we think about healthy ways to live have not been updated any more than have most post-war modern institutions, which are themselves also struggling in the twenty-first century. In 1946, the World Health Organization defined 'health' as 'a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity.' What we understood by 'social' in the middle of the last century now desperately needs an update. In Fully Connected Julia Hobsbawm takes us on a journey - often a personal one, 'from Telex to Twitter' - to illustrate how the answer to the Age of Overload can come from devising management-based systems which are both highly practical and yet intuitive, and which draw inspiration from the huge advances the world has made in tackling other kinds of health, specifically nutrition, exercise, and mental well-being. Drawing on the latest thinking in health and

behavioural economics, social psychology, neuroscience, management and social network analysis, this book provides a cornucopia of case studies and ideas, to educate and inspire a new generation of managers, policymakers and anyone wanting to navigate through the rough seas of overload.

6th International Conference, AIST 2017, Moscow, Russia, July 27–29, 2017, Revised Selected Papers

Too Little, Too Late

Modern life is complicated, much more so than it used to be. Acclaimed author and social entrepreneur, Julia Hobsbawm, shows you a simpler way. The Simplicity Principle challenges the assumption that all things that are complex have to stay that way. It helps keep things as lean, simple and focused as possible. Smartphone users experience concentration interruptions every 12 minutes of the day, there are over 250 billion emails sent every 24 hours and by 2021 the internet will have created more than 3.3 zettabytes of data. Yet complexity doesn't have to dominate, complicate or clutter our lives. Based on a hexagonal model, this book shows you that it's easy to streamline and simplify both your professional and personal lives with lessons based on the natural world. For anyone who feels that life can be too much, The Simplicity Principle will help you break free of the endless choices and complexities that we face in the world today. It's time to gain control of your focus and productivity, and most importantly, KEEP IT SIMPLE.

A broad review of how nonprofits, businesses, and governments work together to tackle social problems Networks for Social Impact takes a systems approach to explain how and when networks make a social impact. Michelle Shumate and Katherine R. Cooper argue that network design and management is not a one-size-fits-all formula. Instead, they show that the type of social issue, the mechanism for social impact, environment, and resources available each determine appropriate choices. Drawing on research from public administration, psychology, business, network science, social work, and communication, this book synthesizes what we know about how to best design and manage networks. It includes illustrations from thirty original case studies which describe groups of organizations addressing issues such as gender-based violence, educational outcomes, senior care, veterans' services, mental health and wellness, and climate change. Additionally, the volume examines critical issues that leaders address in creating and managing networks, including social issue analysis, network governance, securing and managing funding, dealing with power and conflict, using data effectively, and managing change. Each chapter includes tools for network leaders to use to handle these issues. This book is neither an overly idealistic, pro-collaboration account of the benefits of network approaches, nor is it a critical view of these efforts. Instead, this clear and concise volume highlights the opportunities and challenges of networks.

This book constitutes the proceedings of the 6th International Conference on Analysis of Images, Social Networks and Texts, AIST 2017, held in Moscow, Russia, in July 2017. The 29 full papers and 8 short papers were carefully reviewed and selected from 127 submissions. The papers are organized in topical sections on natural language processing; general topics of data analysis; analysis of images and video; optimization problems on graphs and network structures; analysis of dynamic behavior through event data; social network analysis.

This book presents respected experts, researchers, and clinicians providing the latest developments in social work knowledge and research. It discusses the latest in mental health research, information on violence, trauma and resilience, and social policies. Different mental health and social work approaches from around the world are examined in detail, including holistic, ethnopsychiatric, and interventions that place emphasis on recovery, empowerment, and social inclusion. This superb selection of presentations—taken from the 4th International Conference on Social Work in Health and Mental Health held in Quebec, Canada in 2004—comprehensively examines the theme of how social work can contribute to the development of a world that values compassion and solidarity. The volume offers a unique opportunity for practitioners, researchers, and others in the field to explore respected experts' experiences and research which can spark further development of knowledge that can ultimately enrich humanity as a whole. This timely resource springs from the emerging tradition of the sharing of knowledge, an idea now deeply rooted in the international community of social workers in the areas of health and mental health. This volume is extensively referenced and includes figures and tables to

clearly detail information. This book is enlightening reading for practitioners, administrators, educators, researchers, and students of social work. This book was published as a special issue of Social Work in Mental Health.

Why Our Brains are Wired to Connect

Pathways to Health Equity

The PR Knowledge Book is for everyone, irrespective of where you are in the world—whether a student starting out in this industry, self-employed, a home business, small business, start-up, charity, or any other type of organization wanting to embark on your PR journey or someone just plain curious about what it entails. This book covers everything within the world of PR from how to create a brand, how to use social media, how to be newsworthy, to how to contact the media, how to have a global mind-set, the power of networking, and more. It is written in an easy style, packed with powerful tips, proven tools, and real-life case studies from around the world. In 12 chapters you will discover how to get your brand out there so you can attract clients and new business.

Many social scientists lament the increasing fragmentation of their discipline, the trend toward specialization and away from engagement with overarching issues. Opportunities to transcend established subdisciplinary boundaries are rare, but the extraordinary conference that gave rise to this volume was one such occasion. The W. I. Thomas and Florian Znaniecki Memorial Conference on Social Theory, held at the University of Chicago, brought together an outstanding array of scholars representing a variety of contending approaches to social theory. In panels, presentations, and general discussions, these scholars confronted one another in the context of an entire range of approaches. But as readers of this deftly edited collection will discover, the conference was more than a forum for abstract theoretical debate. These papers and discussions represent original scholarly contributions that exemplify orientations to social theory by examining real problems in the functioning of society—from large-scale economic growth and decline to the dynamics of interpersonal interaction. By exploring a few central issues in different ways, this unique conference worked through some lively theoretical incompatibilities and established genuine potential for communication, for complementary and collaborative effort at the core of sociology. The excitement of that dialogue, and the intellectual vitality it generated, are captured for the reader in *Approaches to Social Theory*. "Meaty presentations and confrontations of ideas by people whose views we respect...Recommended to anyone interested in the current state of social theory." —*Contemporary Sociology*

Engaging in ongoing, continuing professional development (CPD) is a strategic imperative for the health informatics professional. In our global economy, healthcare is fast-paced, dynamic, and ever-changing. While this rapid change is both exciting and exhausting, digital health transformation is positively impacting lives, today and every day, in ways not previously imagined. Faced with a COVID-19 pandemic that has forever changed the landscape of health and care delivery, global health and care stakeholders must ensure that our ecosystem continues to rapidly evolve through innovation, government and ministry incentives, and technological advancements to reach citizens everywhere. For these reasons, health informaticists must embrace lifelong learning to ensure they have the professional competencies to advance initiatives that positively impact patient care. *The Handbook of Continuing Professional Development for the Health Informatics Professional, Second Edition* has adapted to the evolving needs of health and care professionals everywhere. The Handbook provides the rationale and the resources to do so and serves as a reference to enhance one's career. No other comprehensive resource exists to assist health informaticists in developing and maintaining their professional competencies. Written as a contributed compilation of topics by leading practitioners, the book discusses the most critical competencies needed to ensure understanding of the vast health and care ecosystem while also highlighting industry influences that shape the very evolution of health information and technology. About HIMSS The Healthcare Information and Management Systems Society (HIMSS) is a global advisor, thought leader, and member association committed to transforming the health ecosystem. As a mission-driven non-profit, HIMSS offers a unique depth and breadth of expertise in health innovation, public policy, workforce development, research, and analytics to advise leaders, stakeholders, and influencers from across the ecosystem on best practices. With a community-centric approach, our innovation engine delivers key insights, education, and engaging events to healthcare providers, payers, governments, startups, life sciences, and other health services organizations, ensuring they have the right information at the point of decision. HIMSS has served the global health community for more than 60 years with focused operations across North America, Europe, the United Kingdom, the Middle East, and Asia-Pacific.

"Stunning in its simplicity, revolutionary in its impact, *Completely Connected* is the profound made practical. It's not just about connecting with others - though your relationships will never be the same. It's not just about connecting with yourself - though that's where it all starts. This uniquely powerful skill unites heart and brain, empathy and insight, and your inner life with the outer world. Doing so builds social-emotional intelligence, a valuable asset in living a joyful, engaged life. From personal relationships to work and school - to being a contributing member of society - *Completely Connected* guides you through the essentials of being human. In this book, Rita Marie Johnson shares the Connection Practice, a unique method for connecting with ourselves and others that is supported by scientific research and testimony from people around the world ... You'll discover how to: achieve maximum brain functioning for greater creativity and performance resolve conflicts quickly and effectively for a safe, productive environment release negative baggage and boost confidence and self-esteem promote collaboration and a sense of belonging in teams and groups integrate your inner strengths and find practical answers to living in the world Johnson's vision is a world where every person practices the art of connection and passes this gift on to the next generation. Through the vivid examples she shares, she spells out exactly how that vision can be realized."--Publisher's description.

Decoding the Patterns of Human Connection

Leading Through Uncertainty - 2nd edition

*What has changed in the workplace? Everything. The traditional office was probably doomed anyway. Then a global shutdown changed everything we thought we knew about work, including where and when it needed to take place. Automation and the Fourth Industrial Revolution have accelerated, and perhaps as much as one third of the world's permanent workforce will soon become remote. In *The Nowhere Office*, Julia Hobsbawm offers a strategic and practical guide to*

navigating this pivotal moment in the history of work and provides lessons for how both employees and employers can adapt. Hobsbawm draws on her extensive networks in business, academia, and entrepreneurship across generations to offer new ideas about how to handle hybrid working, as well as provides deep insight into how the way we work is being transformed by larger issues such as community, hierarchy, bias, identity, and security. The Nowhere Office describes a unique moment in the history of work which, if understood and handled correctly, can provide a springboard for the biggest transformational change in the workplace for a century: something better, more meaningful, and more workable for everyone.

Integrating Social Care into the Delivery of Health Care: Moving Upstream to Improve the Nation's Health was released in September 2019, before the World Health Organization declared COVID-19 a global pandemic in March 2020. Improving social conditions remains critical to improving health outcomes, and integrating social care into health care delivery is more relevant than ever in the context of the pandemic and increased strains placed on the U.S. health care system. The report and its related products ultimately aim to help improve health and health equity, during COVID-19 and beyond. The consistent and compelling evidence on how social determinants shape health has led to a growing recognition throughout the health care sector that improving health and health equity is likely to depend "at least in part" on mitigating adverse social determinants. This recognition has been bolstered by a shift in the health care sector towards value-based payment, which incentivizes improved health outcomes for persons and populations rather than service delivery alone. The combined result of these changes has been a growing emphasis on health care systems addressing patients' social risk factors and social needs with the aim of improving health outcomes. This may involve health care systems linking individual patients with government and community social services, but important questions need to be answered about when and how health care systems should integrate social care into their practices and what kinds of infrastructure are required to facilitate such activities. *Integrating Social Care into the Delivery of Health Care: Moving Upstream to Improve the Nation's Health* examines the potential for integrating services addressing social needs and the social determinants of health into the delivery of health care to achieve better health outcomes. This report assesses approaches to social care integration currently being taken by health care providers and systems, and new or emerging approaches and opportunities; current roles in such integration by different disciplines and organizations, and new or emerging roles and types of providers; and current and emerging efforts to design health care systems to improve the nation's health and reduce health inequities.

Featuring stories from leaders around the world, this practical approach to leadership in today's world of constant change and economic turbulence is based on the author's Healthy Leader model that focuses on six personal dimensions that fuel - and refuel - top executives today.

Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. *Investing in The Health and Well-Being of Young Adults* describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. *Investing in The Health and Well-Being of Young Adults* makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. *Investing in The Health and Well-Being of Young Adults* will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

Shorter Lives, Poorer Health

Awarded second place in the 2017 AJN Book of the Year Awards in the Information Technology category. See how information technology intersects with health care! Health Informatics: An Interprofessional Approach, 2nd Edition prepares you for success in today's technology-filled healthcare practice. Concise coverage includes information systems and applications such as electronic health records, clinical decision support, telehealth, ePatients, and social media tools, as well as system implementation. New to this edition are topics including data science and analytics, mHealth, principles of project management, and contract negotiations. Written by expert informatics educators Ramona Nelson and Nancy Stagers, this edition enhances the book that won a 2013 American Journal of Nursing Book of the Year award! Experts from a wide range of health disciplines cover the latest on the interprofessional aspects of informatics — a key Quality and Safety Education for Nurses (QSEN) initiative and a growing specialty area in nursing. Case studies encourage higher-level thinking about how concepts apply to real-world nursing practice. Discussion questions challenge you to think critically and to visualize the future of health informatics. Objectives, key terms and an abstract at the beginning of each chapter provide an overview of what you will learn. Conclusion and Future Directions section at the end of each chapter describes how informatics will continue to evolve as healthcare moves to an interprofessional foundation. NEW! Updated chapters reflect the current and evolving practice of health informatics, using real-life healthcare examples to show how informatics applies to a wide range of topics and issues. NEW mHealth chapter discusses the use of mobile technology, a new method of health delivery — especially for urban or under-served populations — and describes the changing levels of responsibility for both patients and providers. NEW Data Science and Analytics in Healthcare chapter shows how Big Data — as well as analytics using data mining and knowledge discovery techniques — applies to healthcare. NEW Project Management Principles chapter discusses proven project management tools and techniques for coordinating all types of health informatics-related projects. NEW Contract Negotiations chapter describes strategic methods and tips for negotiating a contract with a healthcare IT vendor. NEW Legal Issues chapter explains how federal regulations and accreditation processes may impact the practice of health informatics. NEW HITECH Act chapter explains the regulations relating to health informatics in the Health Information Technology for Education and Clinical Health Act as well as the Meaningful Use and Medicare Access & CHIP Reauthorization Act of 2015.

Social workers are called upon to shift from a human-centric bias to an ecological ethical sensibility by embracing love as integral to their justice mission and by extending the idea of social justice to include environmental and species justice. This book presents the love ethic model as a way to do eco-justice work using public campaigns, research, community arts practice and other nonviolent, direct action strategies. The model is premised on an active and ongoing commitment to the eco-values of love, eco-justice and nonviolence for the purpose of upholding the public interest. The love ethic model is informed by the stories of eco-activists who used nonviolent actions to address ecological issues such as: pollution; degradation of the environment; exploitation of farm animals; mining industry overriding First Nation Peoples' land rights; and human health and social costs related to the natural resource industries, private land developments and government infrastructure projects. Informed by practice insights by activists from a range of eco-justice concerns, this innovative book provides new directions in social work and environmental studies involving transformational change leadership and dialogical group work between interest groups. It should be considered essential reading for social work students, researchers and practitioners as well as eco-activists more generally. The two-volume set LNCS 11233 and LNCS 11234 constitutes the proceedings of the 19th International Conference on Web Information Systems Engineering, WISE 2018, held in Dubai, United Arab Emirates, in November 2018. The 48 full papers and 21 short papers presented were carefully reviewed and selected from 209 submissions. The papers are organized in topical sections on blockchain, security, social network and security, social network, microblog data analysis, graph data, information extraction, text mining, recommender systems, medical data analysis, Web services and cloud computing, data stream and distributed computing, data mining techniques, entity linkage and semantics, Web applications, and data mining applications. Continuing professional development (CPD) is critical for the health IT professional. Healthcare is fast-paced, dynamic, ever-changing, and global. It's both exciting and exhausting. And it is rapidly evolving through innovation, Federal incentives, and technological advancements. For these reasons, health IT professionals must embrace lifelong learning to ensure they have the professional competencies to advance initiatives that positively impact patient care. This handbook will provide the rationale and the resources to do so and will serve as a reference to accompany one's career success.

New Directions in Leadership and Group Work

Social Work and Global Mental Health

“One of the most interesting and useful books ever written on networking.”—Adam Grant Social Chemistry will utterly transform the way you think about “networking.” Understanding the contours of your social network can dramatically enhance personal relationships, work life, and even your global impact. Are you an Expansionist, a Broker, or a Convener? The answer matters more than you think. . . . Yale professor Marissa King shows how anyone can build more meaningful and productive relationships based on insights from neuroscience, psychology, and network analytics. Conventional wisdom says it's the size of your network that matters, but social science research has proven there is more to it. King explains that the quality and structure of our relationships has the greatest impact on our personal and professional lives. As she illustrates, there are three basic types of networks, so readers can see the role they are already playing: Expansionist, Broker, or Convener. This network decoder enables readers to own their network style and modify it for better alignment with their life plans and values. High-quality connections in your social network strongly predict cognitive functioning, emotional resilience, and satisfaction at work. A well-structured network is likely to boost the quality of your ideas, as well as your pay. Beyond the office, social connections are the lifeblood of our health and happiness. The compiled results from dozens of previous studies found that our social relationships have an effect on our likelihood of dying prematurely—equivalent to obesity or smoking. Rich stories of Expansionists like Vernon Jordan, Brokers like Yo-Yo Ma, and Conveners like Anna Wintour, as well as personal experiences from King's own world of connections, inform this warm, engaging, revelatory investigation into some of the most consequential decisions we can make about the trajectory of our lives.

The bestselling author of The Willpower Instinct introduces a surprising science-based book that doesn't tell us why we should exercise but instead shows us how to fall in love with movement. Exercise is health-enhancing and life-extending, yet many of us feel it's a chore. But, as Kelly McGonigal reveals, it doesn't have to be. Movement can and should be a source of joy. Through her trademark blend of science and storytelling, McGonigal draws on insights from neuroscience, psychology, anthropology, and evolutionary biology, as well as memoirs, ethnographies, and philosophers. She shows how movement is intertwined with some of the most basic human joys, including self-expression, social connection, and mastery--and why it is a powerful antidote to the modern epidemics of depression, anxiety, and loneliness. McGonigal tells the stories of people who have found fulfillment and belonging through running, walking, dancing, swimming, weightlifting, and more, with examples that span the globe, from Tanzania, where one of the last hunter-gatherer tribes on

the planet live, to a dance class at Juilliard for people with Parkinson's disease, to the streets of London, where volunteers combine fitness and community service, to races in the remote wilderness, where athletes push the limits of what a human can endure. Along the way, McGonigal paints a portrait of human nature that highlights our capacity for hope, cooperation, and self-transcendence. The result is a revolutionary narrative that goes beyond familiar arguments in favor of exercise, to illustrate why movement is integral to both our happiness and our humanity. Readers will learn what they can do in their own lives and communities to harness the power of movement to create happiness, meaning, and connection.

Why are we influenced by the behaviour of complete strangers? Why does the brain register similar pleasure when I perceive something as 'fair' or when I eat chocolate? Why can we be so profoundly hurt by bereavement? What are the evolutionary benefits of these traits? The young discipline of 'social cognitive neuroscience' has been exploring this fascinating interface between brain science and human behaviour since the late 1990s. Now one of its founding pioneers, Matthew D. Lieberman, presents the discoveries that he and fellow researchers have made. Using fMRI scanning and a range of other techniques, they have been able to see that the brain responds to social pain and pleasure the same way as physical pain and pleasure; and that unbeknown to ourselves, we are constantly 'mindreading' other people so that we can fit in with them. It is clear that our brains are designed to respond to and be influenced by others. For good evolutionary reasons, he argues, we are wired to be social. The implications are numerous and profound. Do we have to rethink what we understand by identity, and free will? How can managers improve the way their teams relate and perform? Could we organize large social institutions in ways that would work far better? And could there be whole new methods of education? Many Americans believe that people who lack health insurance somehow get the care they really need. Care Without Coverage examines the real consequences for adults who lack health insurance. The study presents findings in the areas of prevention and screening, cancer, chronic illness, hospital--based care, and general health status. The committee looked at the consequences of being uninsured for people suffering from cancer, diabetes, HIV infection and AIDS, heart and kidney disease, mental illness, traumatic injuries, and heart attacks. It focused on the roughly 30 million -- one in seven--working--age Americans without health insurance. This group does not include the population over 65 that is covered by Medicare or the nearly 10 million children who are uninsured in this country. The main findings of the report are that working-age Americans without health insurance are more likely to receive too little medical care and receive it too late; be sicker and die sooner; and receive poorer care when they are in the hospital, even for acute situations like a motor vehicle crash.

Leading Through Uncertainty

Discover how to help young people "make it" in a rapidly changing world Author Stephanie Malia Krauss gets it. Every day she works with leaders across the country as they upgrade learning experiences to better equip young people for a changing world. A mother, former teacher and school leader, Stephanie knows firsthand how hard it is to balance school and program requirements with young people's needs. In *Making It: What Today's Kids Need for Tomorrow's World*, she lays out what adults can do to get young people ready for the future. What you learn may surprise you. With so much changing so fast--accelerated by the impacts of COVID-19--the most in-demand jobs and skills of today may be obsolete by the time our youngest become adults. For kids to be ready for this new reality, they must acquire four critical "currencies" that will serve them well, whatever their future holds: credentials, competencies, connections, and cash. This book focuses on how to prioritize these four key outcomes whenever and wherever learning happens. The author shares research and experience to help you understand and apply a human-centered and future-focused lens directly to your classroom, school, program, or at home. Learn about how the world and workforce is changing, and what that means for the education and preparation young people need Understand how these changes are impacting young people, reshaping their childhoods and transitions into adulthood Glean practical information and ideas you can use to help young people--at every age and stage--to gain readiness "currencies" in the form of credentials, competencies, connections, and cash Challenge your beliefs about what knowledge, experiences and resources are most important for kids to have, and what a college- and career-ready education really requires Discover community-wide strategies that prioritize equity, learning and readiness for the future This book will benefit teachers, counselors, youth workers, parents, school board members, and state education leaders alike. Whether you work in K-12, youth development, or you just want to know how to best support the kids in your life, you will find a timely and useful resource putting young people first and modernizing their learning experiences for the better.

The rapid advancement of technology has fuelled fast-paced change in business, creating a high-performance culture that requires leaders to be resilient, agile and results-focused. But the increased level of uncertainty and an ever-expanding workload often create stress, overwhelm, fear and polarization, leading to disconnection. The world never stops, and when people get caught in the same trap they risk burning out. In *Leading Through Uncertainty*, leadership expert Jude Jennison explores the challenges leaders face as human beings in a technological world, the new habits and behaviours they need to adopt to re-connect on a human to human basis, and the leadership qualities they need to lead through uncertainty. This is a call to return to the core of humanity to find the natural human characteristics of communication, connection, compassion and community, drawing on the experience of working with a herd of horses to understand the impact of non-verbal communication on leadership. The United States is among the wealthiest nations in the world, but it is far from the healthiest. Although life expectancy and survival rates in the United States have improved dramatically over the past century, Americans live shorter lives and experience more injuries and illnesses than people in other high-income countries. The U.S. health disadvantage cannot be attributed solely to the adverse health status of racial or ethnic minorities or poor people: even highly advantaged Americans are in

worse health than their counterparts in other, "peer" countries. In light of the new and growing evidence about the U.S. health disadvantage, the National Institutes of Health asked the National Research Council (NRC) and the Institute of Medicine (IOM) to convene a panel of experts to study the issue. The Panel on Understanding Cross-National Health Differences Among High-Income Countries examined whether the U.S. health disadvantage exists across the life span, considered potential explanations, and assessed the larger implications of the findings. *U.S. Health in International Perspective* presents detailed evidence on the issue, explores the possible explanations for the shorter and less healthy lives of Americans than those of people in comparable countries, and recommends actions by both government and nongovernment agencies and organizations to address the U.S. health disadvantage. The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. *The Future of the Public's Health in the 21st Century* reaffirms the vision of *Healthy People 2010*, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.

Reclaiming Our Health

Our market-based, profit-driven health care system in the United States has put necessary care increasingly beyond the reach of ordinary Americans. Primary health care, the fundamental foundation of all high-performing health care systems in the world, is a critical but ignored casualty of the current system. Unfortunately, primary care is often poorly understood, even within the health professions. This book describes what has become a crisis in primary care, defines its central role, analyzes the reasons for its decline, and assesses its impacts on patients and families. A constructive approach is presented to rebuild and transform U.S. primary care with the urgent goal to address the nation's problems of access, cost, quality and equity of health care for all Americans.

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. *Making Eye Health a Population Health Imperative: Vision for Tomorrow* proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

Scientific experiments and medical improvements in recent years have augmented our bodies, made them manipulable; our personal data have been downloaded, stored, sold, analyzed; and the pandemic has given new meaning to the idea of 'virtual presence'. Such phenomena are often thought to belong to the era of the 'posthuman', an era that both promises and threatens to redefine the notion of the human: what does it mean to be human? Can technological advances impact the way we define ourselves as a species? What will the future of humankind look like? These questions have gained urgency in recent years, and continue to preoccupy cultural and legal practitioners alike. How can the law respond and adapt to a world shaped by technology and AI? How can it ensure that technological developments remain inclusive, while simultaneously enforcing ethical limits to its reach? The volume explores how fictional texts, whether on the page or on screen, negotiate the legal dilemmas posed by the increasing infiltration of technology into modern life.

Time is short in emergency situations; the need for action becomes imperative. Biomedical Informatics can be invaluable in supporting the management of emergency medicine, and the need for the creation of Accident and Emergency Informatics (A&EI) as a novel subfield became obvious. As in all areas of Biomedical Informatics, A&EI must deal with issues such as relevant data collection, the management of data extracted from accident sites, health records or sensors, wearables and apps, and appropriate data processing, with the dual purpose of preventing harm and decision support. This book is an introduction to the research and application domain of A&EI, and is the product of three years' work by the Working Group in A&EI of the International Medical Informatics Association (IMIA). The book presents ten chapters organized in four sections. The first section explores the framework for achieving an emergency-informatics health information infrastructure; the second focuses on the gathering of critical clinical data related to the building up of a smart environment for A&EI; the third introduces state-of-the-art technologies for integration into virtual emergency registries; and the final part considers the delicate issues of patient safety raised by the introduction of surveillance technologies into clinical care, along with other issues presenting challenges to

the domain of A&EI for the future. The book is an important contribution to the field of A&EI, and will be of interest to healthcare professionals, informaticians, and all those who want a better understanding of the domain of Accident and Emergency Informatics.

This two-volume set LNCS 12774 and 12775 constitutes the refereed proceedings of the 13th International Conference on Social Computing and Social Media, SCSM 2021, held as part of the 23rd International Conference, HCI International 2021, which took place in July 2021. Due to COVID-19 pandemic the conference was held virtually. The total of 1276 papers and 241 posters included in the 39 HCII 2021 proceedings volumes was carefully reviewed and selected from 5222 submissions. The papers of SCSM 2021, Part I, are organized in topical sections named: Computer Mediated Communication; Social Network Analysis; Experience Design in Social Computing.

This book constitutes the refereed proceedings of the 5th International Conference on Social Computing, Behavioral-Cultural Modeling and Prediction, held in College Park, MD, USA, in April 2012. The 43 revised papers presented in this volume were carefully reviewed and selected from 76 submissions. The papers cover a wide range of topics including economics, public health, and terrorist activities, as well as utilize a broad variety of methodologies, e.g., machine learning, cultural modeling and cognitive modeling.
