The International Accounting Standards Board (IASB) and its International Financial Reporting Standards (IFRSs), have acquired a central position in the practice and regulation of financial reporting around the world. As a unique instance of a private-sector body setting standards with legal force in many jurisdictions, the IASB's rise to prominence has been accompanied by vivid political debates about its governance and accountability. Similarly, the IASB's often innovative attempts to change the face of financial reporting have made it the centre of numerous controversies. This book traces the history of the IASB from its foundation as successor to the International Accounting Standards Committee (IASC), and discusses its operation, changing membership and leadership, the development of its standards, and their reception in jurisdictions around the world. The book gives particular attention to the IASB's relationships with the European Union, the United States, and Japan, as well as to the impact of the financial crisis on the IASB's work. By its in-depth coverage of the history of the IASB, the book provides essential background information that will enrich the perspective of everyone who has to deal with IFRSs or the IASB at a technical or policy-making level.

Introduction to Corporate Finance

"It's not your money - it belongs to the people." Taking this simple axiom seriously creates unique challenges for the management of public funds. Andrew Graham outlines all aspects of public sector financial management, addressing how funds are obtained, what rules of accountability and accounting are applied, who controls public funds management at the operational level, and how accountability and oversight are dealt with. The skills demanded of public sector managers in financial management are becoming increasingly onerous and complex. Canadian Public Sector Financial Management will be of great help to practitioners in the public sector who wish to better understand well as to students of public administration and the general reader concerned with public financial management issues. The secondedition of Canadian Public-Sector Financial Management updates the widely used text, reflecting on the developments in public financial management over the past six years. Developments in financial reporting to constrain growth and manage their finances more closely are looked at. It remains focused on the practitioner and manager in the public sector.

Accounting standards are an essential element in the regulation of current financial reporting. Standard setters promulgate such standards, and companies and professional accountants follow them in preparing financial reports. Although much has been written about the history of standard setting, the conceptual underpinnings of accounting standards, the process of setting them, and whether such standards should be 'rules-based' or 'principles-based,' there has been little written about the kind of thing they are. This book examines the nature of accounting standards and the very idea of a rule, of implementation guidance, and of the objectives that are included in them. It enables the reader to grasp the reasons for promulgating standards, the role of the conceptual framework in setting standards in an institutional context, and the kind of rules that are useful in regulating financial reporting. The insights provided by this examination are used to throw light on the distinction between 'principles-based' and 'rules-based' standards and on the nature of 'good' accounting standards.'
