This paperback edition, with a new introduction, offers a powerful, compelling, and unassailable argument for reforming America's schooling methods and ideas—by one of America's most important educators, and author of the bestselling Cultural Literacy. For over fifty years, American schools have operated under the assumption that challenging children academically is unnatural for them, that teachers do not need to know the subjects they teach, that the learning "process" should be emphasized over the facts taught. All of this is tragically wrong. Renowned educator and author E. D. Hirsch, Jr., argues that, by disdaining content-based curricula while favoring abstract—and discredited—theories of how a child learns, the ideas uniformly taught by our schools have done terrible harm to America's students. Instead of preparing our children for the highly competitive, information-based economy in which we now live, our schools' practices have severely curtailed their ability, and desire, to learn. With an introduction that surveys developments in education since the hardcover edition was published, The Schools We Need is a passionate and thoughtful book that will appeal to the millions of people who can't understand why America's schools aren't educating our children. A tree stands on a hill by a river. As the sky changes, so does the tree, its branches filling with clouds, stars, snow, birds, mist, and the golden spring sun. One tree can mean many things. Thomas Locker's lyrical text records the changes in the tree's world just as simply as a child might observe them, and his magnificent paintings crystallize the natural phenomena that embellish the tree on each page. Questions at the bottom of each page lead to a unique discussion in the back of the book, where art and science are intertwined, and further depth is added to the wonder of Sky Tree.

From the bestselling author of Cultural Literacy, a passionate and cogent argument for reforming the way we teach our children. Why, after decades of commissions, reforms, and efforts at innovation, do our schools continue to disappoint us? In this comprehensive book, educational theorist E. D. Hirsch, Jr. masterfully analyzes how American ideas about education have veered off course, what we must do to right them, and most importantly why. He argues that the core problem with American education is that educational theorists, especially in the early grades, have for the past sixty years rejected academic content in favor of "child-centered" and "non-to" learning theories that are at odds with how children really learn. The result is failing schools and widening inequality, as only children from content-rich (usually better-off) homes can take advantage of the schools' educational methods. Hirsch unashamedly confronts the education establishment, arguing that a content-based curriculum is essential to addressing social and economic inequality. A nationwide, specific, grade-by-grade curriculum established in the early school grades can help fulfill one of America's oldest and most compelling dreams: to give all children, regardless of language, religion, or origins, the opportunity to participate as equals and become competent citizens. Hirsch not only reminds us of these inspiring ideals, he offers an ambitious and specific plan for achieving them. "Hirsch's case is clear and compelling. His book ought to be read by anyone interested in the education and training of the next generation of Americans."—Glenn C. Altschuler, The Boston Globe "Hirsch once again challenges the prevailing "child-centered" philosophy, championing a return to a "subject-centered" approach to learning."—Publishers Weekly

How children learn to read well and what kind of teaching helps them is a scarcely penetrated mystery. This book is a fascinating and informative research report by a group of teachers who set out to teach children who have failed to acquire a useful degree of literacy; in it they discuss their experiences. The authors are presenting evidence about a central and constant problem in education, an essential kind of evidence which is often ignored, because it is so difficult to collect and present. The report presents enough case-notes and recordings of lessons and discussions to allow readers to make their own interpretations alongside those of the writers. Highly informative about many of the central topics of teaching literacy it discusses children's motivation, the influence of social and cultural background on learning, and different methods of teaching reading.

Amos the mouse and Boris the whale: a devoted pair of friends with nothing at all in common, except good hearts and a willingness to help their fellow mammal. They meet after Amos sets out to sea in his homemade boat, the Rodent, and soon finds himself in extreme need of rescue. Enter Boris. But there will come a day, long after Boris has gone back to a life of whaling about and Amos has gone back to his life of mousing around, when the tiny mouse must find a way to rescue the great whale. The tender yet comical story of this friendship is recorded in text and pictures that are a model of rich simplicity. Here, with apparent ease and concealed virtuosity, Caldecott medalist William Steig brings two winning heroes to life. Amos & Boris is a 1971 New York Times Book Review Best Illustrated Book of the Year, Notable Children's Book of the Year, and Outstanding Book of the Year.
