The Nobel Prize is by far the highest recognition a scientist may receive and the only one with which the general public is familiar. Its prestige has reached improbable heights. At the same time a lot of myth surrounds the Nobel Prize, and this is compounded by the fact that people tend to view scientists with some bewilderment. This book introduces the process of selection of the laureates, discusses the ingredients for scientific discovery and for getting recognition. It reviews the decisive moments of scientific careers en route to the Nobel Prize, points to characteristic features of the laureates, the importance of mentors and venues in scientific careers and other components of success. It also covers some discoverers and discoveries for whom and for which the Nobel Prize never materialized. Whereas there is no general recipe for receiving the Nobel Prize, there are common features of successful scientific careers. The book reveals some information about the scientists' lives and careers that may guide other scientists in increasing their chances of becoming more effective and better recognized players - although it is not expected to help anyone to receive the Nobel Prize! For the general reader The Road to Stockholm reveals the human face of scientists and the human side of their endeavours. The Nobel Prize has served as inspiration for scientists and the general public for a hundred years: this book discusses its problems and celebrates its triumphs.

Hungry? Need lunch? Want the perfect food to impress your girlfriend? Then you need to see Matt, because Matt has an amazing talent. It's called ... Tuckshop. Matt a.k.a. 'The Tuckshop Kid' is back! And he's smaller than ever! He's lost weight, is sort-of enjoying exercise and is going out with the perfect girl, Kayla, who loves food as much as he does. He can hardly believe his luck. But when Matt uncovers Kayla's secret, he realises that no one is perfect and sometimes problems can take on a life of their own. From the author of the award-winning book The Tuckshop Kid comes the companion adventure about food, friendship and finding your way.

Young readers will love to feel the different textures and hear the truck sounds in this interactive, sturdy board book designed for children ages 3 and up. Includes an on/off switch on the back cover to extend battery life. Touch, feel, and hear the trucks on every page of this sturdy board book. Engaging photographs and appealing textures encourage young readers to explore the exciting world of trucks. Press the touch-and-feels to hear five realistic truck sounds, with a button on the last

page to play all five sounds again!

The volume also features extensive university archival material – including correspondence between Fermi and biophysicist Leo Szilard and a letter from Harry Truman – with new introductions that provide context for both the history of physics and the academic tradition at the University of Chicago."--Jacket.

This book explores the disturbing dimensions of the problem of insecurity in Nigeria, such as herdsmen violence, the Boko Haram insurgency, cybercrime, militancy in the Niger Delta, communal conflict and violence, as well as police corruption. It offers a comprehensive discussion of the theoretical foundations of internal security, the threats to internal security, the role of formal and informal agencies in internal security management and the challenges of internal security management.

The Impact of Culture on Tourism examines the growing relationship between tourism and culture, and the way in which they have together become major drivers of destination attractiveness and competitiveness.

Agent Joanna Dark, struggling with her personal demons and the turmoil left in the wake of her battles in Perfect Dark Zero, is once again hurtled into the midst of a war between vast hypercorporations that will do anything to seize control and power, when Daniel Carrington enlists her aid in the conflict with dataDyne. Mcdp 5 Planning

This publication describes the theory and philosophy of military planning as practiced by the U.S. Marine Corps. The intent is to describe how we can prepare effectively for future action when the future is uncertain and unpredictable. In so doing, this publication provides all Marines a conceptual framework for planning in peace, in crisis, or in war. This approach to planning is based on our common understanding of the nature of war and on our warfighting philosophy of maneuver warfare as described in Marine Corps

Doctrinal Publication (MCDP) 1, Warfighting.

In Empower, A.J. Juliani and John Spencer provide teachers, coaches, and administrators with a roadmap that will inspire innovation, authentic learning experiences, and practical ways to empower students to pursue their passions while in school. Empower will provide ways to overcome challenges and turn them into opportunities for our learners.

"Treating bodies as more than discursive in social research can feel out of place in academia. As a result, embodiment studies remain on the outside of academic knowledge construction and critical scholarship. However, embodiment scholars suggest that investigations into the profound division created by privileging the mind-intellect over body-spirit are integral to the project of decolonization. The field of embodiment theorizes bodies as knowledgeable in ways that include but are not solely cognitive. The contributors to this collection suggest developing embodied ways of teaching, learning, and knowing through embodied experiences such as yoga, mindfulness, illness, and trauma. Although the contributors challenge Western educational frameworks from within and beyond academic settings, they also acknowledge and draw attention to the incommensurability between decolonization and aspects of social justice projects in education. By addressing this tension ethically and deliberately, the contributors engage thoughtfully with decolonization and make a substantial, and sometimes unsettling, contribution to critical studies in education."--

For centuries, all manner of truth-seekers have used the lie detector. In this eye-opening book, Geoffrey C Bunn unpacks the history of this device and explores the interesting, often surprising connection between technology and popular culture.

This book addresses contemporary discourses on a wide variety of topics related to the ideological and epistemological changes of the 19th, 20th and 21st centuries, and the ways in which they have shaped the Spanish language and cultural manifestations in both Spain and Hispanic America. The majority of the chapters are concerned with 'otherness' in its various dimensions; the alien Other – foreign, immigrant, ethnically different, disempowered, female or minor – as well as the Other of different sexual orientation and/or ideology. Following Octavio Paz, otherness is expressed as the attempt to find the lost object of desire, the frustrating endeavour of the androgynous Plato wishing to embrace the other half of Zeus, who in his wrath, tore off from him. Otherness compels human beings to search for the complement from which they were severed. Thus a male joins a female, his other half, the only half that not only fills him but which allows him to return to the unity and reconciliation which is restored in its own perfection, formerly altered by divine will. As a result of this transformation, one

can annul the distance that keeps us away from that which, not being our own, turns into a source of anguish. The clashing diversity of all things requires the human predisposition to accept that which is different. Such a predisposition is an expression of epistemological, ethical and political aperture. The disposition to co-exist with the different is imagined in the de-anthropocentricization of the bonds with all living realms. And otherness is, in some way, the reflection of sameness (mismidad). The other is closely related to the self, because the vision of the other implies a reflection about the self; it implies, consciously or not, a relationship with the self. These topics are addressed in this book from an interdisciplinary perspective, encompassing arts, humanities and social sciences.

Markets for many classes of recyclable materials are growing, but market failures and barriers are constraining some markets. This report presents the case for the use of 'industrial' policies which address such market failures and barriers.

This book is a first-of-its-kind, practice-based guide of 36 key concepts?legal, operational, and practical--that countries can use to develop non-conviction based (NCB) forfeiture legislation that will be effective in combating the development problem of corruption and recovering stolen assets.

This is the History of Nintendo, Volume One. 3-in-1 collection of Console Gamer Magazine with over 140+ full color pages of retro goodness. In this volume, we take a trip back to where it all began, deep diving into the Nintendo Entertainment System, then the Super Nintendo, and finally the Nintendo 64. Get a peek behind the scenes and read how the consoles were conceived, the difficulties Nintendo faced as well as showcasing a complete list of hardware and software launched for each console. From development kits and prototypes, to unreleased never seen before games and software, this truly is a 'must have' in the collection of any retro gaming enthusiast. This is the first Volume Collection in the Console Gamer Magazine series, and includes: - #01 History of the Nintendo Entertainment System. (NES) - #02 History of the Super Nintendo. (SNES) - #03 History of the Nintendo 64. (N64) What's inside?: - 3 Books in 1 (140+ pages of content) - Reviews, development stories, unreleased titles & more. - Beautifully designed book with 100's of images. - Complete hardware section. - Top 100 games of all time.

Available in both digital & print. First published August 2019.

Colonial Legacies, Post-Colonial Trajectories

Increasing numbers of people have connections with one country, but live and work in another, frequently owning property or investments in several countries. People with lifelong or subsequently developed impairments of capacity move cross-border or have property or family interests or connections spread across different jurisdictions. This new work fills a gap in a specialist market for a detailed work advising lawyers on all the considerations in these situations. The book provides a clear, comprehensive, and unique overview of all relevant capacity and private international law issues, and the existing solutions in common law and civil law jurisdictions and under Hague Convention XXXV. It sets out the existing law of various important jurisdictions, including detailed chapters on the constituent parts of the UK, Ireland, Jersey, the Isle of Man and the Hague 35 states; and shorter chapters on 26 Non-Hague states and those within federal states, including coverage of the United States, several Australian and Canadian states, and a number of other Commonwealth jurisdictions. Containing a number of helpful case studies and flowcharts, the book draws upon the expertise of the editors in their respective fields, together with detailed contributions from expert practitioners and academics from each relevant jurisdiction. All the editors and many of the contributors and correspondents are members of STEP.

What happens when media technologies are able to interpret our feelings, emotions, moods, and intentions? In this cutting edge new book, Andrew McStay explores that very question and argues that these abilities result in a form of technological empathy. Offering a balanced and incisive overview of the issues raised by 'Emotional AI', this book: Provides a clear account of the social benefits and drawbacks of new media trends and technologies such as emoji, wearables and chatbots Demonstrates through empirical research how 'empathic media' have been developed and introduced both by start-ups and global tech corporations such as Facebook Helps readers understand the potential implications on everyday life and social relations through examples such as video-gaming, facial coding, virtual reality and cities Calls for a more critical approach to the rollout of emotional AI in public and private spheres Combining established theory with original analysis, this book will change the way students view, use and interact with new technologies. It should be required reading for students and researchers in media, communications, the social sciences and beyond.

Enrico Fermi is unquestionably among the greats of the world's physicists, the most famous Italian scientist since Galileo. Called the Pope by his peers, he was regarded as infallible in his instincts and research. His discoveries changed our world; they led to weapons of mass destruction and conversely to life-saving medical interventions. This unassuming man struggled with issues relevant today, such as the threat of nuclear annihilation and the relationship of science to politics. Fleeing Fascism and anti-Semitism, Fermi became a leading figure in America's most secret project: building the atomic bomb. The last physicist who mastered all branches of the discipline, Fermi was a rare mixture of theorist and experimentalist. His rich legacy encompasses key advances in fields as diverse as cosmic rays, nuclear technology, and early computers. In their revealing book, *The Pope of Physics*, Gino Segré and Bettina Hoerlin bring this scientific visionary to life. An examination of the human dramas that touched Fermi's life as well as a thrilling history of scientific innovation in the twentieth century, this is the comprehensive biography that Fermi deserves.

The sensational German bestseller on the overwhelming role of drug-taking in the Third Reich, from Hitler to housewives. 'Bursting with interesting facts' *Vice* 'Extremely interesting ... a serious piece of scholarship, very well researched' Ian Kershaw The Nazis presented themselves as warriors against moral degeneracy. Yet, as Norman Ohler's gripping bestseller reveals, the entire Third Reich was permeated with drugs: cocaine, heroin, morphine and, most of all, methamphetamines, or crystal meth, used by everyone from factory workers to housewives, and crucial to troops' resilience - even partly explaining German victory in 1940. The promiscuous use of drugs at the very highest levels also impaired and confused decision-making, with Hitler and his entourage taking refuge in potentially lethal cocktails of stimulants administered by the physician Dr Morell as the war turned against Germany. While drugs cannot on their own explain the events of the Second World War or its outcome, Ohler shows, they change our understanding of it. *Blitzed* forms a crucial missing piece of the story.

www.BigColoringBooks.comThe Story of Petroleum tells the exciting adventures of Oil Dude and his helpers Lil' Bit, Piper and Derrick. Together they set out to discover fossil fuels. This storybook helps children to understand where oil, coal and gas come from.

Children will learn how fossil fuels are found and why every person uses some product from a fossil fuel in their daily life. The book also details in a fun and exciting way why it's important to protect the environment and our drinking water. It describes how petroleum resources help keep our country healthy and how fossil fuels make our lives so much easier and better. Really Big Coloring Books are teaching/learning tools, tell a story, and promote quality reading time for children, and their families and friends. Really Big Coloring Books sell themselves!- Each book is 17" by 22" printed on high quality white paper, perforated for easy display. Colorful covers are printed on cardstock which may be hung as a poster.- Each book has a minimum of 32 pages, each tested by kids. Over 70 hours of coloring fun. Really Big Coloring Books are the perfect fund-raiser for civic, school, business and education groups. Designed for kids aged 2 to 12

Fiber Optic Essentials starts with a basic discussion on lightwaves and the phenomenon of refraction and reflection. It then goes on to introduces the reader to the field of fiber optics and covers some of the recent developments, such as fiber amplifiers, dispersion compensation and nonlinear effects. A number of other applications are also presented. Examples and comparison with everyday experience are provided wherever possible to help the reader's comprehension. Diagrams are also included to aid in the visualization of certain concepts.

The church and science have drifted apart over the past century. Today the church is often deemed irrelevant by those who trust science, and science is often deemed irrelevant by those whose primary loyalties are to the church. However, this book shows that the new science of virtue--the field of positive psychology--can serve as a bridge point between science and the church and can help renew meaningful conversation. In essence, positive psychology examines how ordinary people can become happier and more fulfilled. Mark McMinn clarifies how positive psychology can complement Christian faith and promote happiness and personal flourishing. In addition, he shows how the church can help strengthen positive psychology. McMinn brings the church's experience and wisdom on six virtues--humility, forgiveness, gratitude, grace, hope, and wisdom--into conversation with intriguing scientific findings from positive psychology. Each chapter includes a section addressing Christian counselors who seek to promote happiness and fulfillment in others.

Using her beauty in order to overcome the challenges of an abusive childhood and financial disadvantages, egomaniacal Sarita Robinson interacts with some of the hip-hop underworld's most powerful players and turns dangerously vengeful when she is abandoned by her supporters. The phrase "in-the-wild" is becoming popular again in the field of human-computer interaction (HCI), describing approaches to HCI research and accounts of user experience phenomena that differ from those derived from other lab-based methods. The phrase first came to the forefront 20-25

years ago when anthropologists Jean Lave (1988), Lucy Suchman (1987), and Ed Hutchins (1995) began writing about cognition being in-the-wild. Today, it is used more broadly to refer to research that seeks to understand new technology interventions in everyday living. A reason for its resurgence in contemporary HCI is an acknowledgment that so much technology is now embedded and used in our everyday lives. Researchers have begun following suit—decamping from their usability and living labs and moving into the wild; carrying out in-situ development and engagement, sampling experiences, and probing people in their homes and on the streets. The aim of this book is to examine what this new direction entails and what it means for HCI theory, practice, and design. The focus is on the insights, demands and concerns. But how does research in the wild differ from the other applied approaches in interaction design, such as contextual design, action research, or ethnography? What is added by labeling user research as being in-the-wild? One main difference is where the research starts and ends: unlike user-centered, and more specifically, ethnographic approaches which typically begin by observing existing practices and then suggesting general design implications or system requirements, in-the-wild approaches create and evaluate new technologies and experiences in situ (Rogers, 2012). Moreover, novel technologies are often developed to augment people, places, and settings, without necessarily designing them for specific user needs. There has also been a shift in design thinking. Instead of developing solutions that fit in with existing practices, researchers are experimenting with new technological possibilities that can change and even disrupt behavior. Opportunities are created, interventions installed, and different ways of behaving are encouraged. A key concern is how people react, change and integrate these in their everyday lives. This book outlines the emergence and development of research in the wild. It is structured around a framework for conceptualizing and bringing together the different strands. It covers approaches, methods, case studies, and outcomes. Finally, it notes that there is more in the wild research in HCI than usability and other kinds of user studies in HCI and what the implications of this are for the field.

THE PARADOXICAL LIFESTYLE OF THE AVERAGE NIGERIAN IS THE

SUM OF THIS BOOK... My relentless pursuit of an understanding of the survival abilities of the average Nigerian in a system that is definitely dysfunctional. Some of us complain, some of us protest, some of us go spiritual and still many others go material, and also a few of us turn to the arts for solace-we write, not to cure other people of madness, but to avoid going mad ourselves... The only book length study to cover the Philippines after Marco's downfall, this key title thematically explores issues affecting this fascinating country, throughout the last century. Appealing to both the academic and non academic reader, topics covered include: national level electoral politics economic growth the Philippine Chinese law and order opposition the Left local and ethnic politics.

This study offers an analysis of trends in international environmental law.

The Economic Causes and Consequences of the First World War

The Pope of Physics

The remarkable evolution of econophysics research has brought the deep synthesis of ideas derived from economics and physics to subjects as diverse as education, banking, finance, and the administration of large institutions. The original papers in this collection present a broad summary of these advances, written by interdisciplinary specialists. Included are studies on subjects in the development of econophysics; on the perspectives offered by econophysics on large problems in economics and finance, including the 2008-9 financial crisis; and on higher education and group decision making. The introductions and insights they provide will benefit everyone interested in applications of this new transdisciplinary science. Ten papers present an updated version of the origins, issues, and applications of econophysics Economics and finance chapters consider lessons learned from the 2008-9 financial crisis Sociophysics chapters propose new thinking on educational reforms and group decision making The transition from undergraduate study to postgraduate study in law has traditionally been somewhat seamless: students are typically enculturated into the discipline of law, and have engaged in a variety of writing and research exercises throughout their undergraduate degree. However, the nature of legal research is changing dramatically, with more emphasis being put on how we are researching, rather than what we are researching. Undergraduate students are increasingly engaging in primary research as part of their degree, and typically borrow from other disciplines to do so. The reason for this is that, to date, there

has been little importance placed on research methods in law. This book aims to rectify this in a manner which is suitable for students, not only in Ireland but internationally. **Legal Research Methods: Principles and Practicalities** is tailored to the needs of researchers in examining varying methodological approaches from a practical perspective. In addition to the principal approaches now commonly used in legal research (the doctrinal method; the socio-legal method; the historical method; and the comparative method) issues such as participatory and community-based research, as well as empirical methods, are examined by leading experts in their fields in a critical but clear manner. The book outlines the various types of methodologies, with authors drawing on their own experiences and expertise to examine the benefits and pitfalls involved in each method. This allows the reader to determine the usefulness of any method to their own research, and aids them in employing these methods and avoiding any pitfalls. [Subject: Legal Research Methods]~

"This second edition of **Australian standards for editing practice**, published by the Institute of Professional Editors Limited (IPEd), the peak body for Australian editors and societies of editors, gives a solid frame to the range of knowledge and skills that competent editors possess. It includes the understanding of new technology and the flexibility to embrace new media, new rules and new language, among the many other factors that enhance clear communication".
