

Garners Law Of Sewers And Drains

This edition includes references to the new Environmental Agency, new constitutional powers for National Park authorities, hedgerow protection powers, the EC Habitats Directive, Water Protection Zones, and the waste management licensing regime.

Clay's Handbook of Environmental Health, since its first publication in 1933, has provided a definitive guide for the environmental health practitioner or reference for the consultant or student. This twentieth edition continues as a first point of reference, reviewing the core principles, techniques and competencies, and then outlining the specialist subjects. It has been refocused on the current curriculum of the UK's Chartered Institute of Environmental Health but should also readily suit the generalist or specialist working outside the UK.

Causes and Effects

The law relating to sewers and drains is one of the most obscure subjects in the Statute Book. The purpose of this work is to bring into focus the complexities of sanitary legislation and extract a set of harmonious principles.

Architect's Legal Handbook: The Law for Architects, Fifth Edition is a collection of papers including those on International Work by Architects, on European community Law affecting Architects, and the Architects' Professional Indemnity Insurance. This collection is a comprehensive guideline to laws in England, Scotland, and the European community. This handbook seeks to make architects more aware of where possible legal pitfalls may lurk. Coverage is updated to include changes in English Law, Scottish Law, English Law of Contract, the Law of Tort, Architect's Appointment and Collateral Warranties, Architects' Liability, English and Scottish Land Laws, and the Standard Building Contracts in England. The origins and sources of the laws and the basic principles are explained, which guide the reader into how these are applied in the architects' relations with their clients and clients, contractors. A wider discussion is given on the topic of collateral warranties, incorporation options, and legal organizations such as partnerships and limited companies. Upon the formation of the European Community, institutions and treaties have arisen, so a review of technical harmonization and standards, right of establishment and freedom to provide services, product liability, and consumer protection is provided in order. The international workplace for British architects is also discussed, covering most countries in Europe. This collection of papers will prove useful for architects and engineers, especially those who want to put up their own architectural firms. The book can be likewise an informative source for architectural students, lawyers, and professors in business and commercial law.

Annual Report

An exposition of the relevant law and the techniques commonly used to meet the regulatory requirements concerning the built environment. Each chapter deals with a discrete topic, combining law, policy and administrative aspects with the engineering, technological and management remedies available.

River Pollution 2: Causes and Effects deals mainly with the causes of river pollution and the nature of the various kinds of pollution and their effects upon rivers. This book is an updated version of the first eight chapters of Aspects of River Pollution (first published early in 1957). Owing to the rapid development of the subject and the ever-increasing amount of literature devoted to it, some sections have been virtually rewritten, much new matter has been added, and minor alterations

throughout the text. This book begins with a review of the long history of river pollution, which can be traced back to ancient civilizations. Separate chapters deal with legal aspects of river pollution: the nature and effects of river pollution; the causes of river pollution; and uses of river water. Subsequent chapters cover the biochemical and physicochemical aspects of river pollution: the impact of river pollution on fishes; and biological aspects of river pollution.

Environmental Law for The Built Environment

Aims to set the substantive law of conveyancing in the context of practical conveyancing transactions and procedures. In line with the Law Society's Legal Practice Course, the book expounds the law using the vehicle of a series of imaginary conveyancing transactions in an imaginary law firm.

The law relating to sewers and drains is one of the most obscure subjects in the Statute Book. The purpose of this well established work, first published over 40 years ago, is to bring into focus the complexities of sanitary legislation and extract a set of harmonious principles.
