

Gear Pumps Group 3 L Technical Information Turolla

Liquid Hydrogen (Properties, Production and Applications) is a collection of lectures given in a course on liquid hydrogen at the University of Grenoble, France, on June 8, 1965, under the auspices of the International Institute of Refrigeration. Contributors explore the physical properties and the technological aspects of both production and utilization of liquid hydrogen. Topics covered range from critical phenomena in fluids to the use of liquid hydrogen in nuclear rocket testing. Comprised of 12 chapters, this volume begins with an overview of the critical point of fluid, followed by a discussion on the properties of liquid hydrogen and its use in nuclear rocket testing. Subsequent chapters focus on propulsion by liquid oxygen and liquid hydrogen; structural cryogenic vessels of rocket stages; the role of chemical propellants in the NASA lunar exploration program; and equipment for liquid hydrogen storage and handling. Industrial advances in liquid hydrogen distillation are also considered, along with liquid hydrogen engineering instrumentation and applications of liquid hydrogen in electrical engineering. The final chapter describes nuclear applications of liquid hydrogen. This book will be of value to students, professors, engineers, and technicians working or are interested in liquid hydrogen.

This book, the fundamentals of chemical engineering are presented with respect to applications in micro system technology, microfluidics, and transport processes within microstructures. Special features of the book include the state-of-the-art in micro process engineering, a detailed treatment of transport phenomena for engineers, and a design methodology for Direct Support, General Support, and Depot Maintenance Manual

 New Technologies, Development and Application IV

Instructions for the Operation, Care, and Repair of Power Boat Machinery
 This book features papers focusing on the implementation of new and future technologies, which were presented at the International Conference on New Technologies, Development, and Application, held at the Academy of Science and Arts of Bosnia and Herzegovina in Sarajevo on June 24-26, 2021. It covers a wide range of future technologies and technical disciplines, including complex systems such as Industry 4.0, patents in industry 4.0, robotics, mechatronics systems; automation; manufacturing; cyber-physical and autonomous systems; sensors; networks; control, energy, renewable energy sources; automotive and biological systems; vehicular networking and connected vehicles; effectiveness and logistics systems; smart grids; nonlinear systems; power, social and economic systems; education; and IoT. The book New Technologies, Development and Application III is oriented toward Fourth Industrial Revolution "Industry 4.0," implementation which improves many aspects of human life in all segments and leads to changes in business paradigms and production models. Further, new business methods are emerging and transforming production systems, transport, delivery, and consumption, which need to be monitored and implemented by every company involved in the global market.

The Horseless Age

In order to complete in an increasingly demanding market, many manufacturing companies have to redesign or restructure their manufacturing systems so that a set of coherent manufacturing strategies can be supported. So this book aims to provide a comprehensive treatment of manufacturing strategy analysis (MSA) and manufacturing systems design (MSD). The strategic concerns of manufacturing activities through the use of an effective MSA/MSD interface. Topics include: A structured approach to formulating manufacturing strategies; A set of linking processes to translate MSA concerns into relevant MSD action plans; Case studies. This book is intended to help graduates and industry-based professionals to make more informed decisions when working on system-design or redesign projects.

Motor Age
 Divided into three sections that are also available as individual volumes, this is the first reference to offer a complete guide to the fundamentals, manufacturing, and applications of pressure-sensitive adhesives and products. An indispensable source of state-of-the-art information, this handbook covers the design for pressure-sensitive adhesives and products, the manufacture technology and equipment for such products, including their testing and application, and the theory and practice that correlate with the main domains of product development. Topically organized, it presents a comprehensive list of terms and definitions and offers a cross-disciplinary look at pressure-sensitive adhesives, spanning such areas as physics, surface chemistry, electronic materials, automotive engineering, packaging, and the biomedical, tape, and label industries. For more complete information on each volume visit www.crcpress.com or go directly to the webpage: Volume 1: Fundamentals of Pressure Sensitive Volume 2: Technology of Pressure-Sensitive Adhesives and Products Volume 3: Applications of Pressure-Sensitive Products
