In *Doug Li v. John Ross and Ross Construction Co., Inc.*, the plaintiff, a Chinese-American, claims he had a significant business relationship with Michelle Greenwood and that the defendant, his brother-in-law, improperly interfered with that relationship by making a number of improper and false statements about the quality of his work. As a result of these statements, the plaintiff claims that Greenwood broke off her relationship with him and instead gave a contract to the defendant's company, Ross Construction Company. The plaintiff also alleges that the defendant not only bears a personal grudge, but an ethnic bias as well. There are three witnesses for the plaintiff and five witnesses for the defendant. The case file details issues of tortious interference with a contract, tortious interference with prospective economic advantage, slander, and punitive damages and contains ample material for motion practice. This third edition also contains new social media exhibits. It is available in four versions: Trial, Faculty, Plaintiff, and Defendant.

Risk, and the headaches that go with it, have always been a major part of any construction project -- risk of loss, negative cash flow, construction claims, regulations, excessive changes, disputes, slow pay -- sometimes you'll make money, and often you won't. But many contractors today are avoiding almost all of that risk by working under a construction management contract, where they are simply a paid consultant to the owner, running the job, but leaving him the risk. This manual is the how-to of construction management contracting. You'll learn how the process works, how to get started as a CM contractor, what the job entails, how to deal with the issues that come up, when to step back, and how to get

the job completed on time and on budget. Includes a link to free downloads of CM contracts legal in each state.

1. HISTORICAL BACKGROUND In the late 1950s many members of the design professions-Engineers as well as Architects-became concerned about their exposure to claims for professional malpractice and particularly about the increasing number of claims that had been successfully brought against them arising out of their Construction Phase activities. This led to special studies sponsored by the American Institute of Architects and the Engineers joint Counsel. The outcome was twofold: the development of a policy of professional liability insurance to insure Engineers and Architects against errors and omissions in the performance of their professional services, and the review and development of the customary contractual arrangements defining the design professional's undertakings vis a vis his client (the Owner), the Project to be designed, and the Contractor who was to implement that design. At the outset, the AIA's Owner-Architect Agreement (No. B131), General Conditions (No. A201) and the Owner-Contractor Agreements (Nos. A101 & 111) were the documents most frequently used by design professionals, and these received particular attention. In the early 1960s it became apparent that there was a need for a separate series of documents prepared to address these relationships when the Project to be designed involved primarily engineering considerations. The number of Projects for which the

Engineer was employed by the Owner as the prime professional to handle the Project design and construction administration was increasing.
