

Geography Eso 3 Oxford

Most developed economies, including single-industry and resource dependent rural or small town regions, are transforming rapidly as a result of social, political, and economic change. Collectively, they face a number of challenges as well as new opportunities. This international collaboration describes a critical political economy framework that will be useful for understanding these transitions. Transformation of Resource Towns and Peripheries describes the multi-faceted process of transition and change in resource dependent rural and small town regions since the end of the Second World War. The book incorporates international case studies from Australia, Canada, Finland and New Zealand, with the express purpose of highlighting similarities and differences in patterns and practices in each country. Chapters explore three main themes: how corporate ties and trade linkages are changing and impacting rural communities and regions; how resource industry employment is changing in these small communities; and how local community capacity and leadership are working to mitigate challenges and take advantage of new opportunities. This book will be of interest to students of regional studies, geography, and rural and industrial sociology. It will also have a strong appeal to policy-makers and local regional development practitioners.

Children's Literature and Imaginative Geography

Hazell's Annual

In the last few years, anarchism has been rediscovered as a transnational, cosmopolitan and multifaceted movement. Its traditions, often hastily dismissed, are increasingly revealing insights which inspire present-day scholarship in geography. This book provides a historical geography of anarchism, analysing the places and spatiality of historical anarchist movements, key thinkers, and the present scientific challenges of the geographical anarchist traditions. This volume offers rich and detailed insights into the lesser-known worlds of anarchist geographies with contributions from international leading experts. It also explores the historical geographies of anarchism by examining their expressions in a series of distinct geographical contexts and their development over time. Contributions examine the changes that the anarchist movement(s) sought to bring out in their space and time, and the way this spirit continues to animate the anarchist geographies of our own, perhaps often in unpredictable ways. There is also an examination of contemporary expressions of anarchist geographical thought in the fields of social movements, environmental struggles, post-statist geographies, indigenous thinking and situated cosmopolitanisms. This is valuable reading for students and researchers interested in historical geography, political geography, social movements and anarchism.

Remote Sensing of Leaf Area Index (LAI) and Other Vegetation Parameters

A Journal of Literature, Science, the Fine Arts, Music, and the Drama

The Annual American Catalogue Cumulated

The Bookseller

Geog. is a course specially written for Key Stage 3 of the revised (year 2000) National Curriculum. It combines a rigorous approach to content with a lively presentation and style. For the pupil, the course provides clear, step-by-step illustrated explanations and plenty of questions and activities. For the teacher, both specialist and non-specialist, the course offers effective classroom delivery and reliable support.

Innovations in Bridging the Research-Practice Divide

Evidence-based policing is based on the straightforward, but powerful, idea that crime prevention and crime control policy should be based on what works best in promoting public safety, as determined by the best available scientific evidence. Bringing together leading academics and practitioners, this book explores a wide range of case studies from around the world that best exemplify the integration of scientific evidence in contemporary policing processes. Chapters explore the transfer of scientific knowledge to the practice community, the role of officers in conducting police-led science, connection of work between police researchers and practitioners, and how evidence-based policing can be incorporated in daily police functions. The Globalization of Evidence-Based Policing is written for both researchers and practitioners interested in ensuring that scientific research is at center stage in policing. Agencies (including law enforcement agencies, research centers, and institutions of higher learning) can look to these case studies as road maps to better foster an evidence-based approach to crime prevention and crime control. Those already committed to evidence-based policing can look to these chapters to ensure that evidence-based policing is firmly institutionalized within their agencies. Accessible and compelling, this book is essential reading for all those interested in learning more about and

doing more to bring about evidence-based policing.

Early Critical Geographers and Present-Day Scientific Challenges

The Geography, Nature and History of the Tropical Pacific and its Islands

The Annual American Catalog

Geography & History, Secondary 3

This volume provides an accessible scientific introduction to the historical geography of Tropical Pacific Islands, assessing the environmental and cultural changes they have undergone and how they are affected currently by these shifts and alterations. The book emphasizes the roles of plants, animals, people, and the environment in shaping the tropical Pacific through a cross-disciplinary approach involving history, geography, biology, environmental science, and anthropology. With these diverse scientific perspectives, the eight chapters of the book provide a comprehensive overview of Tropical Pacific Islands from their initial colonization by native peoples to their occupation by colonial powers, and the contemporary changes that have affected the natural history and social fabric of these islands. The Tropical Pacific Islands are introduced by a description of their geological formation, development, and geography. From there, the book details the origins of the island's original peoples and the dawn of the political economy of these islands, including the domestication and trade of plants, animals, and other natural resources. Next, readers will learn about the impact of missionaries on Pacific Islands, and the affects of World War II and nuclear testing on natural resources and the health of its people. The final chapter discusses the islands in the context of natural resource extraction, population increases, and global climate change. Working together these factors are shown to affect rainfall and limited water resources, as well as the ability to sustain traditional crops, and the capacity of the islands to accomodate its residents.

Library Catalog of the Metropolitan Museum of Art, New York

Monitoring of vegetation structure and functioning is critical to modeling terrestrial ecosystems and energy cycles. In particular, leaf area index (LAI) is an important structural property of vegetation used in many land surface vegetation, climate, and crop production models. Canopy structure (LAI, fCover, plant height, and biomass) and biochemical parameters (leaf pigmentation and water content) directly influence the radiative transfer process of sunlight in vegetation, determining the amount of radiation measured by passive sensors in the visible and infrared portions of the electromagnetic spectrum. Optical remote sensing (RS) methods build relationships exploiting in situ measurements and/or as outputs of physical canopy radiative transfer models. The increased availability of passive (radar and LiDAR) RS data has fostered their use in many applications for the analysis of land surface properties and processes, thanks also to their insensitivity to weather conditions and the capability to exploit rich structural and textural information. Data fusion and multi-sensor integration techniques are pressing topics to fully exploit the information conveyed by both optical and microwave bands.

Teacher's book

Transformation of Resource Towns and Peripheries

Where do children travel when they read a story? In this collection, scholars and authors explore the imaginative geography of a wide range of places, from those of Indigenous myth to the fantasy worlds of Middle-earth, Earthsea, or Pacificus, from the semi-fantastic Wild Wood to real-world places like Canada's North, Chicago's World Fair, or the modern urban garden. What happens to young protagonists who explore new worlds, whether fantastic or realistic? What happens when Old World and New World myths collide? How do Indigenous myth and sense of place figure in books for the young? How do environmental or post-colonial concerns, history, memory, or even the unconscious affect an author's creation of place? How are steampunk and science fiction mythically re-enchanting for children? Imaginative geography means imaged earth writing: it creates what readers see when they enter the world of fiction. Exploring diverse genres for children, including picture books, fantasy, steampunk, and realistic novels as well as plays from Canada, the United States, the United Kingdom, and Ireland from the early nineteenth century to the present, *Children's Literature and Imaginative Geography* provides new geographical perspectives on children's literature.
