OUT OF THE FLESH of our mothers come dreams and memories of the Gods. Of other kind than the normal inducement of interest and increasing skill, there exists a continual pressure upon the artist of which he is sometimes partially conscious but rarely entirely aware. He learns early or late in his career that power of literal reproduction (such as that of the photographic apparatus) is not more than slightly useful to him. He is compelled to find out from his artist predecessors the existence, in representation of real form, of super-sessions of immediate accuracies: he discovers within himself a selective conscience and he is satisfied, normally, in large measure by the extensive field afforded by this broadened and simplified beyond this is a region and that a much greater one, for exploration. The objective understanding, as we see, has to be attacked by the artist and a subconscious method, for correction of conscious visual accuracy, must be used. No amount of manual skill and consciousness of error will produce good drawing. A recent book on drawing by a well-known painter is a case in point; there the examples of masters of draughtsmanship may be compared with the painter-author's own, side by side, and the futility of mere skill and interest examined. Therefore to proceed further, it is necessary to dispose of the subject in art also (that is to say the subject in the illustrative or complex sense). Thus to clear the mind of inessentials permits through a clear and transparent medium, without prepossessions of any kind, the most definite and simple forms and ideas to attain expression.

Baby Owl has stayed up all night, but he's definitely NOT sleepy. So why do all the other animals in the forest think it's past his bedtime? He's not stretching, after all, he's just exercising his wings. And he's only yawning because he's bored – owls need a lot of excitement, you know. This comic tale of a toddler who isn't quite ready for bed will be a sure-fire hit with children – and parents!

Using Evidence

Gas Dynamics

This book presents, in an innovative and effective way, a detailed coverage of Greek history from the period of colonisation through to the death of Alexander the Great. A prologue introduces the reader to the various types of source material used by historians, and wherever possible the most relevant examples of this - both written and referred to, giving the benefit of firsthand contact with the sources. The text would be used most effectively in conjunction with the most recent publication of the written sources. The book contains many photographs, maps and diagrams, and includes time lines, summaries, mapping exercises and study questions through which the reader not only an excellent preparation for examinations in Ancient History, but also a very readable and entertaining account of the main periods in the history of ancient Greece.

Conceptualizing Global History

Applied Nonparametric Statistics

What is Quantum Mechanics? A Physics Adventure comprehensively traces the historical development of quantum mechanics, treating a complex subject in a light-hearted, user-friendly manner. It not only introduces the reader to the concepts of quantum mechanics, but also tells the story behind the theories. It is easy to understand for beginners because it was written by people going through the learning process themselves. Yet, even the seasoned scientist will enjoy the controversy and drama as the development of physics unfolds in the book.Dr. Yoichiro Nambu, 2008 Nobel Prize Winner in Physics, served as a senior adviser to the student authors of What is Quantum Mechanics? A Physics Adventure at the Transnational College of LEX throughout their journey of discovery.

The Book of Automatic Drawing

Ancient Greece

This book covers the most commonly used nonparametric statistical techniques by emphasizing applications rather than theory. Exercises and examples are drawn from various disciplines including agriculture, biology, sociology, education, psychology, medicine, business, geology, and anthropology. The applications of techniques are presented in a step-by-step format that is repeated for all illustrative examples. Concepts are reinforced with many references to statistical literature to show the relevance to real-world problems. Chapters contain references of available computer programs and software packages that apply to methods presented in the book.

A Physics Adventure

I'm Not Sleepy!

This text presents a detailed coverage of three crucial centuries in the history of the Roman people: the second and first centuries BC and the first century AD. It examines major issues including the development of the Roman republican form of government, Rome's expansion in the Mediterranean, the decline of the republic, the founding of the principate and the Julio-Claudian period. The introductory chapters will familiarise students with the source material and give them an understanding of those events and influences which played a large part in moulding the character of the Romans and the nature of their institutions. These chapters are essential reading for any student who wishes to understand clearly the complicated political history of the second and first centuries BC. The ancient sources and archaeological material serve both to describe events and to allow students to evaluate and interpret historical documents and pictorial evidence. Throughout the text exercises enable students to recognise differing interpretations, distinguish between fact and opinion and discern bias.
