A Bridge to Quality

The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Her earache, sore throat, and chest congestion were just not getting better. With no appointments available to see Dr. Be Well until late next day, Ms Runouta Patience decides it's off to QuickFix retail medical clinic to get feeling well again. After being treated with decongestants and an antibiotic, a week later she arrives at Dr. Be Well's office for a follow-up visit, where the receptionist hands her a clipboard with endless forms to complete before seeing the doctor. She is also asked if she wishes to join Dr. Be Well's new accountable care organization—an ACO. What? Wasn't she already his patient? Finally after almost getting writer's cramp, she is taken to a room, where in walks Dr. Guess Who, ANP-C, ACNS-BC, DNP. At first, Runouta Patience is disturbed that Dr. Be Well is unavailable. But Dr. Guess Who is kind, professional in her demeanor, extremely thorough, and even tests her understanding of the asthma recommendations that she makes. Leaving the office, Runouta Patience writes out a check for her office visit co-payment and upon arriving home downloads an app onto her smartphone that will allow her to send peak airflow rates to her doctor to help manage her asthma. Some weeks later, however, her condition again deteriorates and she must go to the local emergency room, where she receives a breathing treatment and is admitted to hospital. Expecting to see Dr. Be Well, she is again surprised as in comes young Dr. Hyam Here, the hospitalist on duty who will care for her for at least the next forty-eight hours while she is hospitalized. Through simulated patient scenarios such as these, the reader is introduced to many of the milestones that have occurred in healthcare delivery. Problems currently faced are discussed and potential solutions provided. Advance Praise for "Modern Healthcare Delivery..." "Dr. Zema has authored a most comprehensive tome on our U. Medical professionalism faces distinctive challenges in the 21st century. In this chapter, we review the history of professionalism, address specific challenges physicians face today, and provide an overview of efforts to address these issues, including behavioral and virtue ethics

approaches. First, we discuss core features professions share and the development of codes of medical ethics that guide the practice of western medicine. Second, we address challenges related to the doctor–patient relationship, continuity of care, cultural competence, conflicts of interest, and the regulation of quality of care through maintenance of certification. We then explore three cultural trajectories that have deeply influenced medical practice: the technologic imperative, physicians' collective neglect of structural factors impacting medicine, and the rise of commercialism. Finally, we describe efforts to address these challenges, focusing on the Physician Charter developed by the American Board of Internal Medicine and widely endorsed by medical boards and societies internationally.

Building the Health Care Workforce

Chapter 9. The good doctor: professionalism in the 21st century

As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

Value driven healthcare is the lasting legacy of the Affordable Care Act, which had three goals: to improve access to healthcare by increasing healthcare insurance coverage, to improve the patient's experience and quality of care, and to slow the rate of increase in healthcare costs. Regardless of changes to the financing of healthcare or changes in policy, value-based purchasing for healthcare is to remain a constant feature of the healthcare horizon. Value-based purchasing is a demand side strategy to reward quality in health care delivery. Value-based purchasing involves cost considerations and includes the actions of employers, the public sector, health plans, and individual consumers in making healthcare decisions. Effective health care services and high performing health care providers are incentivized to provide quality outcomes and to control cost. Value-based purchasing drives quality metrics which are publicly reported and serve as important levers for changes in healthcare delivery. Geriatric patients consume a disproportionate share of healthcare resources, so CMS directs Medicare and drives geriatric healthcare models. All other insurers generally model CMS/Medicare guidelines. Innovative geriatric care models which demonstrate improved outcomes and cost moderation are scaled and lessons learned used to create new healthcare models. The best data for broader value driven healthcare comes from the geriatric models, which currently have the best data available. This book traces the origins of value-based purchasing and current geriatric care models and synthesizes their implications for today's changing health system. It also discusses healthcare accountability and risk sharing. The audience includes geriatric healthcare professionals, but also a wider audience interested in broader healthcare models and value driven healthcare from a policy, economic, and ethical perspective. These include primary care physicians, specialists who work with aging patients, hospital administrators, healthcare educators, healthcare organizations, and all medical professionals working with aging patients and patients affected by healthcare reform.

This book aims to be a single point of reference for advances in the care of geriatric populations across medical and surgical specialties. The aging population is a unique demographic with its own health challenges. Geriatricians are specifically trained to address these challenges but few medical students or residents enter geriatrics, even as the demand for geriatric expertise increases. The practices of many medical and surgical specialists are dominated by older patients who may themselves see many specialists but rarely visit geriatricians. This updated edition elucidates the most common medical conditions seen in aging patients and translates approaches to those conditions for physicians across specialties. Divided into three sections that assemble crosscutting issues, medical specialties, and surgical and related specialties, this book serves as a guide for clinicians of all backgrounds who will work with older patients as the demographic ages further. This second edition of Geriatrics for Specialists expands the number of specialist chapters to reflect growth in research in aging and clinical care for older people in dermatology, plastic surgery, and behavioral neurology. All original chapters from the first edition are extensively revised and updated to reflect the rapid growth of new knowledge in the field.
