change everything for you. For years, photographer Vanessa Joy has been using off-camera flash to create gorgeous portraits that look like they were shot in the most beautiful natural light at the perfect time of day. Well, guess what? That consistent look was not created thanks to the most amazing luck with the weather. No. It was created by a pro photographer who mastered her use of off-camera flash. And with her down-to-earth and practical explanations, that's exactly what Vanessa teaches you in this book.

Vanessa breaks down off-camera flash into an easy-

to-understand approach, and instead of focusing on the gear and the settings (which are also included, of course), she focuses on the kinds of shots you want to make. This book is about learning to use off-camera flash easily and quickly so that you can create beautiful, natural-looking light in any situation, at any time you need it...regardless of the weather or time of day.

The book is divided into three parts. Part One covers the fundamentals of off-camera flash, and it does so without blasting you with a firehose of information.

Instead, Vanessa gives you the basics you need so that you can start shooting right away without becoming overwhelmed with technical jargon.

Once you're set up and ready to go, Vanessa jumps right into Part Two with specific photo scenarios and real-world situations where you'll learn key techniques for using your flash to create consistent, beautiful photographs. For each scenario, Vanessa provides the goal for the shoot, a gear list, the step-by-step shooting instructions, and images that show both the progress of the shoot and the behind-the-

scenes shots or lighting diagrams of the setup. She also discusses problems you may encounter, variations on the shot, and additional practical scenarios for each situation.

Just a few examples include:

- *Creating silhouettes*
- *Shooting at sunset*
- *Fixing an ugly-light room*

Finally, Part Three tackles the questions you'll likely have once you've got the basics under your belt and you're already creating great photos with your off-camera flash—things like high-speed sync, sync speed, a practical understanding of the inverse square law, etc. There is also a helpful FAQ section at the end of the book.

other production activities, film takes the world "out there" and refashions it. Religion achieves similar ends by setting apart particular objects and periods of time, telling stories, and gathering people together for communal actions and concentrated focus. The result of both cinema and religious practice is a re-created world: a world of fantasy, a world of ideology, a world we long to live in, or a world we wish to avoid at all costs. Religion and Film introduces readers to both religious studies and film studies by focusing on the formal similarities between

cinema and religious practices and on the ways they each re-create the world. Explorations of film show how the cinematic experience relies on similar aesthetic devices on which religious rituals have long relied: sight, sound, the taste of food, the body, and communal experience. Meanwhile, a deeper understanding of the aesthetic nature of religious rituals can alter our understanding of film production. Utilizing terminology and theoretical insights from the study of religion as well as the study of film, Religion and Film shows that by paying attention

to the ways films are constructed, we can shed new light on the ways religious myths and rituals are constructed and vice versa. This thoroughly revised and expanded new edition is designed to appeal to the needs of courses in religion as well as film departments. In addition to two new chapters, this edition has been restructured into three distinct sections that offer students and instructors theories and methods for thinking about cinema in ways that more fully connect film studies with religious studies.

Jamison's emergence at the age of seventeen from his self-described "prison of silence" took place over a profoundly emotional and dramatic twelve-month period that is retold from his father's perspective. The book reads like a spy thriller while allowing the reader to share in the complex emotions of both exhilaration and anguish

Once Jamison's extraordinary story has been told, Jamison takes over the narrative to share the story from his perspective, allowing the world to hear from someone who many had dismissed and cast aside as incapable. Jamison's remarkable transformation challenges the conventional wisdom surrounding autism, a disability impacting 1 in 36 Americans. Many scientists still consider nonspeakers with autism—a full 40 percent of those on the autism spectrum—to be “mentally retarded.” Is it possible that the experts are wrong about several million

Underestimated: An Autism Miracle will touch your heart, inspire you, remind you of the power of love, and ultimately leave you asking tough questions about how many more Jamisons might be waiting for their chance to be freed from their prison of silence, too. And, for the millions of parents of children with autism, the book offers a detailed description of a communication method that may give millions of people with autism back their voice.

middle of a field, or perhaps the event is in a florescent-lit room. These scenarios can be particularly intimidating for beginning photographers who don't know how to handle the many undesirable lighting situations they may encounter. In *Shooting in Sh*tty Light*, professional photographers Lindsay Adler and Erik Valind cover the top ten worst lighting situations and provide a variety of solutions for each. They explain which solutions are most practical and why one option might be preferable over another, examining such problems as extremely low lighting when no flash is allowed, strong backlight, and the light on an overcast day. Unlike other books that focus on natural light or lighting in general, this book addresses a very real need of beginning photographers, answering the question, "What do I do when the lighting is

Offers real-life examples and practical solutions for handling poor light, such as identifying natural reflectors, bouncing light off a wall, or utilizing flash gels. Features a fun, conversational style to help you conquer the fear of poor lighting and approach any lighting situation with confidence!
