Key Terms are bolded in the text, listed at the end of the chapter, and included in a Glossary at the end of the book. Each chapter presents several photos and numerous tables and figures to highlight the major ideas, issues, individuals, and institutions discussed. Each chapter also contains a Let ' s Compare feature, comparing selected states to Texas on various dimensions.

Since 1938 and 1941, nutrient intake recommendations have been issued to the public in Canada and the United States, respectively. Currently defined as the Dietary Reference Intakes (DRIs), these values are a set of standards established by consensus committees under the National Academies of Sciences, Engineering, and Medicine and used for planning and assessing diets of apparently healthy individuals and groups. In 2015, a multidisciplinary working group sponsored by the Canadian and U.S. government DRI steering committees convened to identify key scientific challenges encountered in the use of chronic disease endpoints to establish DRI values. Their report, Options for Basing Dietary Reference Intakes (DRIs) on Chronic Disease: Report from a Joint US-/Canadian-Sponsored Working Group, outlined and proposed ways to address conceptual and methodological challenges related to the work of future DRI Committees. This report assesses the options presented in the previous report and determines guiding principles for including chronic disease endpoints for food substances that will be used by future National Academies committees in establishing DRIs.

Development studies in developing regions such as Southern Africa rely heavily on materials developed by Europeans

with a European context. European dominance in development studies emanates from the fact that the discipline was first developed by Europeans. Some argue that this has led to distortions in theory and practice of development in Southern Africa. This book wishes to begin Africa's expedition to develop proper material to de-Westernize while Africanizing the context of the scholarship of rural development. African Perspectives on Reshaping Rural Development is an essential reference source that repositions the context of rural development studies from the Western-centric knowledge system into an African context in order to solve African-centered problems. Featuring research on topics such as food security, poverty reduction, and community engagement, this book is ideally designed for planners, researchers, practitioners, policymakers, government officials, academicians, and students seeking clarity on theory and practice of development in Africa.

T cells play a vital role mediating adaptive immunity, a specific acquired resistance to an infectious agent produced by the introduction of an antigen. There are a variety of T cell types with different functions. They are called T cells, because they are derived from the thymus gland. This volume discusses how T cells are regulated through the operation of signaling mechanisms. Topics covered include positive and negative selection, early events in T cell receptor engagement, and various T cell subsets.

Tim Marshall, the New York Times bestselling author of Prisoners of Geography, offers "a readable primer to many of the biggest problems facing the world" (Daily Express, UK) by examining the borders, walls, and boundaries that divide countries and their populations. The globe has always been a world of walls, from the Great Wall of China to Hadrian's Wall to the Berlin Wall. But a new age of isolationism and economic nationalism is upon us, visible in Trump's obsession with building a wall on the Mexico border, in Britain's Brexit vote, and in many other places as well. China has the great Firewall, holding back Western culture. Europe's countries are walling themselves against immigrants, terrorism, and currency issues. South Africa has heavily gated communities, and massive walls or fences separate people in the Middle East, Korea, Sudan, India, and other places around the world. In fact, more than a third of the world's nation-states have barriers along their borders. Understanding what is behind these divisions is essential to understanding much of what's going on in the world today. Written in Tim Marshall's brisk, inimitable style, The Age of Walls is divided by geographic region. He provides an engaging context that is often missing from political discussion and draws on his real life experiences as a reporter from hotspots around the globe. He examines how walls, borders, and barriers have been shaping our political landscape for hundreds of years, and especially since 2001, and how they figure in the diplomatic relations and geo-political events of today. "Marshall is a skilled explainer of the world as it is, and geography buffs will be pleased by his latest" (Kirkus Reviews). "Accomplished, well researched, and pacey...The Age of Walls is for anyone who wants to look beyond the headlines and explore the context of some of the biggest challenges facing the world today, it is a fascinating and fast read" (City AM, UK).

This research employs the narrative of mental suffering as a prism through which to study Chinese migration in France. It provides new analytical angles and new perspectives on the paradoxical existence and conditions of the migrants, and traces the social links between individuals and societies, objectivity and subjectivity, the real and the imaginary. Although the idea that politics is influenced by its cultural setting is so plausible as to be almost irresistible, political culture has remained a contested and controversial concept. Just what the cultural setting consists of and how its influence on politics is transmitted remain unclear and disputed. This book argues that the problem is insufficient attention to basic theoretical questions. Positivist political culture research based on attitude surveys, and the interpretivist alternative which explores meaningful context, despite their mutual antipathy share a neglect of these questions, while materialist and discursivist critiques of, and alternatives to, political culture research end up posing the very same questions. Resisting the specialization and sectarianism of much of political and social science, the book tackles head on the questions of what political culture is and how it works. It begins by arguing that we must explore the nature and dynamics of political culture. To do this it is necessary to reach beyond political science and reopen the interdisciplinary exchange in which political culture research was founded. The book reaches into the philosophy of Ludwig Wittgenstein and Michael Polanyi for foundational arguments about the nature of culture, and into social, cognitive, and cultural psychology for findings about human motivation which are radical in their implications for political culture research and its methods. It develops a dualistic theory of political culture, and uses the two dimensions of practice and discourse in a new analysis of the otherwise mysterious causal dynamics of political culture. It provides an explanation of what has hitherto only been asserted: the role played by political culture in both political stability and political change. Thus it restores a rigorously argued concept of political culture to a central place in political science, and suggests an agenda for its future development.

This memoir provides a thorough review of the geology of the rimmed Arabian Intrashelf Basin, reconciling differing interpretations of lithostratigraphy, sequence stratigraphy and biostratigraphy. Variation of energy levels and facies due to its setting in the SE palaeotradewind belt are described. The roles subtle tectonism played in developing the basin and in the Late Jurassic creating restriction by uplift and exposure of the Tethys shelf are evaluated. The intrashelf basin formed during rising sea level as a single rimmed carbonate intrashelf basin. A possible global cooling phase resulted in a lowstand which restricted the basin, resulting in petrographically unique carbonate source rock facies dominated by cyanobacterial deposition. Two subsequent 3rd order carbonate sequences largely filled the basin. Eustatic change concomitant with uplift of the Tethys shelf resulted in alternation of carbonates and evaporites (gypsum-anhydrite) across the region. The end result was a sealed intrashelf basin which preserved early-formed porosity and confined generated hydrocarbons within the intrashelf basin facies.

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposure of human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk through spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk reduction. A range of options for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Presented in strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and climate change, including policymakers, the private sector and academic researchers.

This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of cardiac arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in research could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and the industry to improve health outcomes from sudden cardiac arrest across the United States.
