Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote

best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful

conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies,

criminal prosecutors and attorneys, and forensic science educators.

Task, Vicki Hearne's innovative masterpiece on animal training, brings our perennial discussion of the human-animal bond to a whole new metaphysical level. Based on studies of literary criticism, philosophy, and extensive hands-on experience in training, Hearne asserts, in boldly anthropomorphic terms, that animals (at least those that interact more with humans) are far more intelligent than we assume. In fact, they are capable of developing an understanding of "the good," a moral code that influences their motives and actions. Drawing on an eclectic range of influences—Nietzsche, T. S. Eliot, Disney animal trainer William Koehler,

and Genesis from the Bible, among others—Hearne writes in contemplative, exploratory, and brilliant prose as she interweaves personal anecdotes with philosophy. Hearne develops an entirely new system of animal training that contradicts modern animal behavioral research and that, as her examples show, is astonishingly effective. Widely praised, highly influential, and now with a new foreword by New York Times bestselling author Karen Joy Fowler, Adam's Task will make every trainer, animal psychologist, and animal-lover stop, think, and question.

In this heartfelt and powerfully affecting coming of age story, a neurodivergent 7th grader is determined to find her missing best friend before it's too late. Things never seem to go as easily for thirteen-year-old Frankie as they do for her sister, Tess. Unlike Tess, Frankie is neurodivergent. In her case, that means she can't stand to be touched, loud noises bother her, she's easily distracted, she hates changes in her routine, and she has to go see a therapist while other kids get to hang out at the beach. It also means Frankie has trouble making friends. She did have one--Colette--but they're not friends anymore. It's complicated. Then,

just weeks before the end of seventh grade, Colette unexpectedly shows up at Frankie's door. The next morning, Colette vanishes. Now, after losing Colette yet again, Frankie's convinced that her former best friend left clues behind that only she can decipher, so she persuades her reluctant sister to help her unravel the mystery of Colette's disappearance before it's too late. A powerful story of friendship, sisters, and forgiveness, *Tornado Brain* is an achingly honest portrait of a young girl trying to find space to be herself.

teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). O'Reilly's bestselling book on Linux's bash shell is at it again. Now that Linux is an established player both as a server and on the desktop Learning the bash Shell has been updated and refreshed to account for all the latest changes.

Indeed, this third edition serves as the most valuable guide yet to the bash shell. As any good programmer knows, the first thing users of the Linux operating system come face to face with is the shell the UNIX term for a user interface to the system. In other words, it's what lets you communicate with the computer via the keyboard and display. Mastering the bash shell might sound fairly simple but it isn't. In truth, there are many complexities that need careful explanation, which is just what Learning the bash Shell provides. If you are new to shell programming, the book provides an excellent introduction,

covering everything from the most basic to the most advanced features. And if you've been writing shell scripts for years, it offers a great way to find out what the new shell offers.

Learning the bash Shell is also full of practical examples of shell commands and programs that will make everyday use of Linux that much easier.

With this book, programmers will learn: How to install bash as your login shell The basics of interactive shell use, including UNIX file and directory structures, standard I/O, and background jobs Command line editing, history substitution, and key bindings How to customize

your shell environment without programming
The nuts and bolts of basic shell programming,
flow control structures, command-line options
and typed variables **Process handling, from job**
control to processes, coroutines and subshells

First Published in 1990, *Children with Literacy Difficulties* presents the work of a number of teachers with considerable experience of helping children with problems. The difficulties which some children experience in the area of reading have often been considered separately from the same children's possible problems in the areas of writing, spelling, and handwriting. This is no longer realistic. Nowadays most teachers appreciate the importance of linking all teaching in the language field. As a result, throughout the school, it should become impossible to erect barriers between oral dialogue, writing (both by hand

Television past, as LP Hartley might have once said, is another country. And, in the early 1980s it certainly was a different beast. There were still only three channels to watch; the evening's programmes finished with the playing of the national anthem; and the biggest prize on TV was not Chris Tarrant's million pounds but a speedboat on Bullseye . . . But as Tom Bromley suggests in this funny and warming memoir, all that was about

to change: The 1980s saw the end of the original golden era of television, and the beginnings of TV as we know it today. In 1982, Channel 4 became the first new terrestrial channel for almost twenty years and by the end of the decade, Rupert Murdoch's Sky Television was vying to become Britain's first multi-channel provider. The result of all this was that slowly but surely, British viewers had more choice than ever before and the cost of this choice was the erosion of television as a shared national event. And no-one felt this change more deeply than Tom Bromley. Television played a large part in Tom's childhood. His first word was 'two', as in BBC Two, and his earliest childhood memory is seeing
