This volume, 16th in a series about service learning and the academic disciplines, focuses on the ways service learning adds immediacy and relevance to the study of history. The authors of this collection provide answers to why history and service learning should be connected, and they describe strategies to bring this about. The chapters are: (1) "Service-Learning as a Strategy for Advancing the Contemporary University and the Discipline of History" (Bill M. Donovan); (2) "Service-Learning, Academically Based Community Service, and the Historic Mission of the American Urban Research University" (Ira Harkavy); (3) "Emerson's Prophecy" (John Saltmarsh); (4) "Service-Learning and History: Training the Metaphorical Mind" (J. Matthew Gallman); (5) "The Turnerian Frontier: A New Approach to the Study of the American Character" (Michael Zuckerman); (6) "Reflections of a Historian Teaching a Service-Learning Course about Poverty and Homelessness in America" (Albert Camarillo); (7) "History as Public Work" (Elisa von Joeden-Forgey and John Puckett); (8) "Reclaiming the Historical Tradition of Service in the African American Community" (Beverly W. Jones); (9) "Service-Learning as a Tool of Engagement: From Thomas Aquinas to Che Guevara" (Bill M. Donovan); (10) "Serving and Learning in the Chilean Desert" (Marshall C. Eakin); (11) "Classical Studies and the Search for Community" (Ralph M. Rosen); and (12) "The Unspoken Purposes of Service-Learning: Teaching the Holocaust" (Steve Hochstadt). Each chapter contains references. An appendix contains an annotated bibliography of 44 items and a list of contributors to the volume. (SLD)

Elite Education - International Perspectives is the first book to systematically examine elite education in different parts of the world. Authors provide a historical analysis of the emergence of national elite education systems and consider how recent policy and economic developments are changing the configuration of elite trajectories and the social groups benefiting from these. Through country-level case studies, this book offers readers an in-depth account of elite education systems in the Anglophone world, in Europe and in the emerging financial centres of Africa, Asia and Latin America. A series of commentaries highlight commonalities and differences between elite education systems, and offer insights into broader theoretical issues, with which educationalists, researchers and policy makers are engaging. With authors including Stephen J. Ball, Donald Broady, Rubén Gaztambide-Fernández, Heinz-Hermann Krüger, Maria Alice Nogueira, Julia Resnik and Agnès van Zanten, the book offers a benchmark perspective on issues frequently glossed over in comparative education, including the processes by which powerful groups retain privilege and 'elite' status in rapidly changing societies. Elite Education - International Perspectives will appeal to policy makers and academics in the fields of education and sociology. Simultaneously it will be of special relevance to post-graduates enrolled on courses in the sociology of education, education policy, and education and international development.

My Children! My Africa! (TCG Edition)

The purpose of this book is to draw readers' attention to various legal intricacies associated with deploying self-directed artificial intelligence systems (AIS), particularly emphasizing the limits of the law, vis-à-vis liability problems that may emerge within third-party contracts. With the advent of today's ostensive "Amazon Halo or Alexa," consumers are having to conclude contracts (e.g., sale of goods and distant financial services) in much more complex (cybernetic) environments. Generally, with one party acting in the capacity of a human being while the other (as an autonomous thing/device [AIS] with capabilities well beyond that of humans) representing the interests of others (not just other humans). Yet traditional jurisprudence is limited in scope for holding these systems legally accountable if they were to malfunction and cause harm. Interestingly, within the judicial system itself, the use of AIS is more prevalent now, including within the criminal justice system in some jurisdictions. In the United States, for instance, AIS algorithms are utilized to determine sentencing and bail processing. Still, jurists find themselves limited to traditional legal methodologies and tools when tackling novel situations brought about by these systems. For example, traditional strict liability concept, as applied in tort law, typically ties responsibility to the person(s) (e.g., AIS developers) influencing the decision-making process. In contract law, particularly where third parties are concerned, AIS are equated to tools for the purposes of traditional strict liability rules. Thus, binding anyone on whose behalf they would have acted (irrespective of whether such acts were intentional or foreseeable).

Now in its second edition, How to Read Texts introduces students to key critical approaches to literary texts and offers a practical introduction for students developing their own critical and close-reading skills. Written in a lively, jargon-free style, it explains critical concepts, approaches and ideas including: - Debates around critical theory - The role of history and context - The links between creativity and criticism - The relationship between author, reader and text. The new edition now includes guidance on analysing a range of multi-media texts, including film and online media as well as the purely literary. In addition to new practical examples, readings, exercises and 'checkpoints' that help students to build confidence in their own critical readings of both primary and secondary texts, the book now also offers guidance on writing fully-formed critical essays and tips for independent research. Comprehensively updated and revised throughout, How to Read Texts is an indispensable guide for students making the transition to university study.

The search for a means to an end to apartheid erupts into conflict between a black township youth and his "old-fashioned" black teacher.

One of the most significant developments in school education in recent years has been the development and introduction of standards, a subject of considerable controversy. This book is the result of a symposium held in Kiel, a symposium that was arranged by two leading science education groups, one at IPN (Leibniz Institute for Science Education at the University of Kiel) in Germany and the other at the University of York, UK. The seminar brought together experts from 15 countries. These countries include those that have extensive experience with the effects of standards on the educational system, on individual schools and teachers and on students. Other reports concern countries which are introducing them shortly and yet others on countries that are in the early stages of development of standards. 11 are from Europe and the others are from Australia, Israel, Taiwan and the U.S. The book is divided into three parts. In Part A, two of the organizers set the scene, describing the reasons for arranging the symposium and outlining the preparations and the work done at the meeting. Part B contains 17 reports from the 15 countries and in Part C, there are two summaries, analysing the conclusions, taken from two different vantage points. The controversies surrounding standards remain. However, this book gives a succinct and authoritative overall account of the advantages and disadvantages of their introduction taken from the experiences of many countries.

Cry, the Beloved Country

In this exciting sequel, April O'Connell continues to capture the essence of adventure as she pulls you back into the wilds of the jungle as Zura has grown into a strong woman and has taken on the challenges of raising a family.

Online learning has increasingly been viewed as a possible way to remove barriers associated with traditional face-to-face teaching, such as overcrowded classrooms and shortage of certified teachers. While online learning has been recognized as a possible approach to deliver more desirable learning outcomes, close to half of online students drop out as a result of student-related, course-related, and out-of-school-related factors (e.g., poor self-regulation; ineffective teacher-student, student-student, and platform-student interactions; low household income). Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason. A well-implemented early warning system, therefore, can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation. Despite the popularity of early warning systems, research on their design and implementation is sparse. Early Warning Systems and Targeted Interventions for Student Success in Online Courses is a cutting-edge research publication that examines current theoretical frameworks, research projects, and empirical studies related to the design, implementation, and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and, therefore, more actionable. Highlighting a range of topics such as curriculum design, game-based learning, and learning support, it is ideal for academicians, policymakers, administrators, researchers, education professionals, instructional designers, data analysts, and students.
