Educational Assessment in a Time of Reform provides background information on large-scale examination systems more generally and the South African examination specifically. It traces the reforms in the education system of South Africa since 1994 and provides a description of the advances in modern test theory that could be considered for future standard setting endeavours. At the heart of the book is the debate on whether the current standard of education in Africa is good enough . If not, then how can it be improved? The aim of this book is to provide a point of departure for discussions on standard-setting, quality assurance, equating of examinations and assessment approaches. From this point of departure recommendations for practices in general and the exit-level (Grade 12) examination results in particular can be made. This book is ideal reading for principals, teachers, academics and researchers in the fields of educational assessment, measurement, and evaluation.

Across practice areas and jurisdictions, new lawyers need fundamental lawyering skills. Global Lawyering Skills is designed to teach these fundamental lawyering skills by introducing students to a broader range of skills than a traditional research and writing textbook.

While the book covers foundational objective and persuasive legal writing

skills, it also addresses other lawyering skills, such as oral argument, alternative dispute resolution, transactional drafting, and client interviewing and counseling. Additionally, students need an understanding of how cross-cultural and transnational considerations impact the practice of law. GLS is one of the only legal research and writing textbooks available that covers foreign legal systems, intercultural competence, and cross-cultural considerations in the practice of law. GLS is sufficient for a two-year curriculum, but would also work well in a one, two, or three semester course. The new edition provides updates to existing chapters and includes new chapters on professionalism and professional identity, incorporating feedback, and judicial writing.

This book recognizes the importance of an informed cross-cultural understanding of the policies and practices of different societies within the field of disability, human rights and education. It represents an attempt to critically engage with issues arising from the historical and contemporary domination of portrayals of 'the western' as advanced, democratic and exemplary, in contrast to the construction of the 'rest of the world' as backward,

primitive and inferior in these fundamental areas. How human rights are understood in different contexts is a key theme in this book. Importantly, some contributors raise questions about the value of a 'human rights' model across all societies. Other contributors see the struggle for human rights as at the heart of the struggle for an inclusive society. The implications for education arising from this debate are identified, and a series of questions are raised by each author for further reflection and discussion as well as providing a stimulus for developing future research.

Disability, Human Rights and Education is recommended reading for students and researchers interested in Disability Studies, inclusive education and social policy. It is also directly relevant to professionals and policy makers in the field seeking a greater understanding of cross-cultural perspectives.

In this book, authors Murphy and O' Neill propose a new way forward, moving away from high-stakes, test-based writing assessment and the curriculum it generates and toward an approach to assessment that centers on student learning and success. Reviewing the landscape of writing assessment and existing research-based theories on writing, the authors demonstrate how a test-based approach to accountability and current practices have undermined effective teaching and learning of writing. This book bridges the gap between real-world writing that takes place in schools, college, and careers and the writing that students are asked to do in standardized writing assessments to offer a new ecological approach to writing assessment. Murphy and O' Neill's new way forward turns accountability inside out to help teachers understand the role of formative assessments and assessment as inquiry. It also brings the outside in, by bridging the gap between authentic writing and writing assessment. Through these two strands, readers learn how assessment systems can be restructured to become better aligned with contemporary understandings of writing and with best practices in teaching. With examples of assessments from elementary school through college, chapters include guidance on designing assessments to address multiple kinds of writing, integrate reading with writing, and

incorporate digital technology and multimodality. Emphasizing the central role that teachers play in systemic reform, the authors offer sample assessments developed with intensive teacher involvement that support learning and provide information for the evaluation of programs and schools. This book is an essential resource for graduate students, instructors, scholars and policymakers in writing assessment, composition, and English education.

By focusing on what students learn rather than what they are taught, schools can redefine their mission and begin the transition to a professional learning community. After interviewing and observing principals, administrators, and teachers, the authors identify seven leadership practices that effective PLC leaders share, along with the techniques that have led them to sustainable success.

Washback refers to the influence of language testing on teaching and learning. This volume, at the important intersection of language testing and teaching practices, presents theoretical, methodological, and practical guidance for current and future washback studies. In the field of language testing, researchers' major interest has traditionally been focused on issues and solving problems inherent in tests in order to increase their reliability and validity. However, the washback effect goes well beyond the test itself to include factors, such as curriculum,

teacher and learner behaviors inside and outside the classroom, their perceptions of the test, and how test scores are used. Only recently have researchers started to empirically investigate the phenomenon of washback. This volume of such research serves two essential purposes by:

- \*providing an overview of the complexity of washback and the various contextual factors entangled within testing, teaching, and learning; and
- \*presenting empirical studies from around the world that offer insights into the effects of washback in specific educational contexts and models of research on which future studies can be based.

The extensive use of test scores for various educational and social purposes in society nowadays makes the washback effect a high-interest phenomenon in the day-to-day educational activities of teachers, researchers, program coordinators/directors, policymakers, and others in the field of education. *Washback in Language Testing: Research Contexts and Methods* is a valuable resource for those who are interested in the application of findings to actual teaching and learning situations or conduct washback research in their own contexts, including educational and psychological testing experts, as well as

High-stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations, especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment. Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book's primary audience consists of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and

Educational Leadership in Becoming reconsiders educational leadership in its current forms, and presents a more plausible form of educational leadership to contend with the complexities currently found in universities and schools. Much of the literature in vogue concerning educational leadership ranges from transactional to transformative representations of the concept in relation to educational management and policy, curriculum inquiry and pedagogical action. The primary aim of this book is to revisit some of the dominant understandings of educational leadership and to offer an extended view of the practice along the lines of potentiality and becoming. Davids and Waghid argue that all current forms of educational leadership are insufficient to enact responsible human action, particularly when it comes to addressing the combined issues of globalisation and equitable redress and transformation, whether in relation to leading schools or universities. The primary objective of the book is to draw on the Agambian notion of becoming in order to show that an educational leadership in becoming is better placed to not only address the myriad challenges besetting education, but to also enhance the potential of leadership in action. The book addresses an international audience by analysing conceptions of transformative leadership and should be read by anyone who is interested in education and educational leadership, as well as the impact of neoliberal agendas on education and society. It should also appeal to those interested in the philosophy of education.

This open access edited volume is a comparative effort to discern the short-term educational impact of the covid-19 pandemic on students, teachers and systems in Brazil, Chile, Finland, Japan, Mexico, Norway, Portugal, Russia, Singapore, Spain, South Africa, the United Kingdom and the United States. One of the first academic comparative studies of the educational impact of the pandemic, the book explains how the interruption of in person instruction and the variable efficacy of alternative forms of education caused learning loss and disengagement with learning, especially for disadvantaged students. Other direct and indirect impacts of the pandemic diminished the ability of families to support children and youth in their education. For students, as well as for teachers and school staff, these included the economic shocks experienced by families, in some cases leading to food insecurity and in many more causing stress and anxiety and impacting mental health. Opportunity to learn was also diminished by the shocks and trauma experienced by those with a close relative infected by the virus, and by the constrains on learning resulting from students having to learn at home, where the demands of schoolwork had to be negotiated with other family necessities, often sharing limited space. Furthermore, the prolonged stress caused by the uncertainty over the resolution of the pandemic and resulting from the knowledge that anyone could be infected and potentially lose their lives, created a traumatic context for many that undermined the necessary focus and dedication to schoolwork. These individual effects were reinforced by community effects, particularly for students and teachers living in communities where the multifaceted negative impacts resulting from the pandemic were pervasive. This is an open access book.
