

Great Civilisations The Aztecs Ladybird History Series

The culture of the sophisticated Aztec civilization, who founded the Mexican empire, is presented in detail with illustrations depicting the ancient people's lifestyle, religious ceremonies, and customs.

From the speed of light to moving mountains--and everything in between--ZOOM explores how the universe and its objects move. If you sit as still as you can in a quiet room, you might be able to convince yourself that nothing is moving. But air currents are still wafting around you. Blood rushes through your veins. The atoms in your chair jiggle furiously. In fact, the planet you are sitting on is whizzing through space thirty-five times faster than the speed of sound. Natural motion dominates our lives and the intricate mechanics of the world around us. In ZOOM, Bob Berman explores how motion shapes every aspect of the universe, literally from the ground up. With an entertaining style and a gift for distilling the wondrous, Berman spans astronomy, geology, biology, meteorology, and the history of science, uncovering how clouds stay aloft, how the Earth's rotation curves a home run's flight, and why a mosquito's familiar whine resembles a telephone's dial tone. For readers who love to get smarter without realizing

it, ZOOM bursts with science writing at its best.

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in

both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed. Illustrated guide provides information on the lives and works of over 100 authors and illustrators of children's books.

Although it started as a British television show with a small but devoted fan base, Doctor Who has grown in popularity and now appeals to audiences around the world. In the fifty-year history of the program, Doctor Who's producers and scriptwriters have drawn on a dizzying array of literary sources and inspirations. Elements from Homer, classic literature, gothic horror, swashbucklers, Jacobean revenge tragedies, Orwellian dystopias, Westerns, and the novels of Agatha Christie and Evelyn Waugh have all been woven into the fabric of the series. One famous storyline from the mid-1970s was rooted in the Victoriana of authors like H. Rider Haggard and Arthur Conan Doyle, and another was a virtual remake of Anthony Hope's *The Prisoner of Zenda*—with robots! In *Doctor Who and the Art of Adaptation: Fifty Years of Storytelling*, Marcus Harmes looks at the show's frequent exploration of other sources to create memorable episodes. Harmes observes that adaptation in Doctor Who is not just a matter of transferring literary works to the screen, but of bringing a diversity of texts into dialogue with the established mythology of the series as well as with longstanding science fiction tropes. In this process, original stories are not just resituated, but transformed into new works. Harmes considers what this approach reveals about adaptation, television production, the art of storytelling, and the long-term success and cultural resonance enjoyed by Doctor Who. *Doctor Who and the Art of Adaptation* will be of interest to students of literature and television alike, and to scholars interested in adaptation studies. It will also appeal to fans of the series interested in tracing the deep cultural roots of television's longest-running and most literate science-fiction adventure.

With new readings of ancient texts, *Ancient Maya Politics* unlocks the long-enigmatic political system of the Classic Maya.

The Children's Buyer's Guide

Monthly current affairs magazine from a Christian perspective with a focus on politics, society, economics and culture. A sweeping, authoritative history of 16th-century Spain and its legendary conquistadors, whose ambitious and morally contradictory campaigns propelled a small European kingdom to become one of the formidable empires in the world “The depth of research in this book is astonishing, but even more impressive is the analytical skill Cervantes applies. . . . [He] conveys complex arguments in delightfully simple language, and most importantly knows how to tell a good story.” —The Times (London) Over the few short decades that followed Christopher Columbus's first landing in the Caribbean in 1492, Spain conquered the two most powerful civilizations of the Americas: the Aztecs of Mexico and the Incas of Peru. Hernán Cortés, Francisco Pizarro, and the other explorers and soldiers that took part in these expeditions dedicated their lives to seeking political and religious glory, helping to build an empire unlike any the world had

ever seen. But centuries later, these conquistadors have become the stuff of nightmares. In their own time, they were glorified as heroic adventurers, spreading Christian culture and helping to build an empire unlike any the world had ever seen. Today, they stand condemned for their cruelty and exploitation as men who decimated ancient civilizations and carried out horrific atrocities in their pursuit of gold and glory. In *Conquistadores*, acclaimed Mexican historian Fernando Cervantes—himself a descendent of one of the conquistadors—cuts through the layers of myth and fiction to help us better understand the context that gave rise to the conquistadors' actions. Drawing upon previously untapped primary sources that include diaries, letters, chronicles, and polemical treatises, Cervantes immerses us in the late-medieval, imperialist, religious world of 16th-century Spain, a world as unfamiliar to us as the Indigenous peoples of the New World were to the conquistadors themselves. His thought-provoking, illuminating account reframes the story of the Spanish conquest of the New World and the half-century that irrevocably altered the course of history.

The Ladybird Story

Proceedings and Debates of the ... Congress Bulletin

"It is not widely known that 2014 marks the centenary of the publication of books in The Ladybird Series by the British commercial printers Wills & Hepworth. From the start of the First World War to the start of the Second they published about 100 cheap and cheerful colour-illustrated children's books for the popular market, but only in 1940 did they fashion Bunnykins Picnic Party which was to be the first of the Ladybird Books that would come to be recognised and bought by most of the British population. Lorraine Johnson and Brian Alderson trace the history of the Ladybird venture from its wobbly beginning through Wills & Hepworth's triumphant management of the series up to its sale in 1972, with further chapters on the last decades at the printworks in Loughborough down to 1999. A comprehensive bibliography of books edited under the Wills & Hepworth imprint gives ample evidence of their catering for children at all stages of development, a central element in the millions of books that they sold. The many illustrations, mostly in colour, give convincing support to the reasons for their popularity."--Wheelers.co.nz

These twenty-six A-Z animal adventure stories will whisk kids across the globe as they paddle the Nile River, lumber through the Amazon rain forest, and march across the Mesoamerican terrain. There is

one item that makes traveling through time and space possible for the animals--the Commandment Stone! From dodging arrows of the Visigoths, to escaping the clutches of the Samurai, or simply sipping frothy xocolatl (or hot chocolate) with the Aztecs, kids are sure to remember the people and places from long ago, inspiring them to consider the contribution they will, in turn, make to this world.

In Mexico Mystique Frank Waters draws us deeply into the ancient but still-living myths of Mexico. To reveal their hidden meanings and their powerful symbolism, he brings to bear his gift for intuitive imagination as well as a broad knowledge of anthropology, Jungian psychology, astrology, and Eastern and esoteric religions. He offers a startling interpretation of the Mayan Great Cycle — our present Fifth World — whose beginning has been projected to 3113 B.C., and whose cataclysmic end has been predicted by 2011 A.D.

Explores the development of natural history since the Renaissance and contextualizes current discussions of biodiversity.
