The text provides an overview of the Australian Health Care system at a level suitable for 1st year undergraduate students. It describes the 'architecture' of the system and its key components (public hospital sector, private hospital and health insurance, GPs and primary care, community health, public health), some of the things that shape the system and introduces key concepts that underpin it such as the idea of the welfare state or a universal health system.

Transformational leadership is the philosophy. Lean provides the tools. Patterson is initially skeptical about the idea of applying Lean processes to Healing U. After all, patients are not inanimate objects flowing through a process. But by focusing on this idea Patterson and his team have a revelation. Lean, and all its tools can supercharge process performance and patient care when the patients, and their unique perspectives and experiences, are acknowledged and used to improve the process. Using this approach, Healing University revolutionizes the application of Lean in Healthcare and introduces the concept of Healing Pathways: Value Streams through which patients flow. Patterson and his team empower their people to use Lean to improve Healing Pathways. To his surprise, this approach also creates a profound cultural transformation at Healing University. Patterson realizes that process and cultural transformation are two sides of the same coin. It s about the process; and it s about the people. The improvements in patient care, patient satisfaction, profitability, and team member satisfaction are astounding. This is a story about people, and the process of healing healthcare.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in

improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health care team can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that impede quality care, and explores how systems approaches can be used to implement change.

Winners of the Medical Economics Award "Bout and his colleagues... have crafted a team model that builds upon the unique strengths of nurses and primary care physicians coupled with effective communication and implementation of evidence-based care. This represents a great advance over business as usual." --David B. Reuben, MD Director, Multicampus Program in Geriatric Medicine and Gerontology Chief, Division of Geriatrics David Geffen School of Medicine at UCLA Guided Care is an exciting, new team model used to provide medical care to clients with chronic conditions. This model involves adding a Guided Care nurse to the primary care practice team. It is also the most efficient, cost-effective way to respond to the needs of patients. This book provides physicians, nurses, administrators, and leaders of health care organizations with step-by-step guidance on adopting Guided Care Nursing into their practice. Featured Highlights: Evaluating the primary care practice's readiness to adopt Guided Care Preparing for adoption Integrating Guided Care into existing practices Hiring nurses for the primary care team Assuring financial viability Comparing Guided Care with other models The future of primary care, and the quality of care for adults with chronic conditions, depends on finding approaches to improve efficiency and effectiveness. This book demonstrates that Guided Care yields the best outcomes for patients and for primary care at large.

Each year increasing numbers of Americans report the use of some form of complementary and alternative medicine (CAM). The purpose of this descriptive study was to examine the implementation of a health benefits package including CAM therapies for employees of a small, self-insured manufacturing company. A secondary analysis guided by a decision-making theoretical framework was performed using data from the primary study, which examined the cost impact of adding two CAM therapies (Healing Touch and guided imagery) to the health care coverage for some employees of the company. The primary hypothesis of the study was that the insurance expenditures of employees who did not participate in CAM therapies would be significantly higher than participating employees one year after the intervention. Other hypotheses included a cost comparison of insurance expenditures over six years, employee satisfaction, and a decision to continue to receive CAM therapy following completion of the study. Data files included insurance expenditure payouts for all employees from 1995 to 2000 following termination of the study intervention and surveys completed by the study participants (N = 41) during the year of intervention. Overall statistical analysis did not support two research hypotheses that addressed the insurance expenditures in the four years prior to the study and in the year following the study. Mean expenditures for the non-participant group of employees continued to be significantly higher than for the study participants. An examination of employee satisfaction for the study participants revealed statistically significant support for the use of Healing Touch and guided imagery. Significant decreases in pain, stress and increase in emotional well-being (decreased anxiety and depression) were reported by the study participants following therapy. Findings in this study did not support the addition of CAM therapies to a health benefits package. However, the conclusions drawn do not negate the importance of continued research to understand the roles of energy healing, mind-body interventions and other CAM therapies in managing health-related conditions and to explore cost of CAM therapy to employers and employees.

There's bad news... And there's good news... The bad news is that our nation is in serious trouble when it comes to providing health care to our seniors. * Over 77 million people from the post-war baby boom are headed into their retirement years. Along with that, comes declining health and often multiple chronic illnesses. * There are not nearly enough geriatric and primary care specialists to deal with this population. Making matters worse-it's too late to train more. * This population not only threatens to overwhelm our health care facilities, the current methods of treating people with multiple chronic conditions is heartlessly inefficient, and the cost is astronomical. The good news is that maybe there's a way out of this impending disaster. If we can't create enough properly trained specialists to meet the need, maybe we can magnify the impact of the ones we have. * Maybe we can devise a new model for treating people with multiple chronic conditions. * Maybe we can create a new breed of specially trained, lower cost, medical professionals to magnify the physician's impact. * Maybe we can find a way to increase the quality of care these seniors receive and, at the same time, reduce costs to the health care system. It not only can be done-it has been done. It's called Guided Care; and it might literally transform the way health care is delivered to our senior citizens. This isn't your standard "patient education" book. It's a story of discovery-and a story of hope.

Reflection is widely recognised as an invaluable tool in health care, providing fresh insights which enable practitioners to develop their own practice and improve the quality of their care. This book introduces the practitioner to the concept of 'Guided reflection', an innovative research process in which the practitioner is assisted by a mentor (or 'guide') in a process of self-enquiry, development, and learning through reflection, in order to become fully effective. Guided reflection is grounded in individual practice, and can provide deeply meaningful insights into self-development and professional care. The process results in a reflexive narrative, which highlights key issues for enhancing health care practice and professional care. This book uses a collection of such narratives from everyday clinical practice in nursing, health visiting and midwifery to demonstrate the theory and practicalities of guided reflection and narrative construction. These narratives portray the values inherent in caring, highlight key issues in clinical practice, reveal the factors that constrain the quest to realise practice, and examine the ways practitioners work towards overcoming these constraints.

The best of disease comes in many forms, in both physical and mental destruction. Some diseases are seen in cells through microscopes while others, through DNA sequencing. The world is full of battles that we never see taking place, some inside our bodies and minds, others, amongst the ground we walk, which cause disease or cancer. And with disease comes adversity""leaving families shaken and torn, sometimes even broke from the health-care costs accumulated fighting back against illness. Life-long battles of those who struggle with cystic fibrosis provide educational opportunities we can learn from. Provided we listen, these unique experiences""insights into the light among dark times""are the physician's best asset to offer simple ways to improve. More often than not, I have discovered the Lord has led them down and through the rugged path made of cobblestone, guided by the Word of God and Scripture from Biblical texts. Health-care professionals, doctors and patients alike, along with families affected by disease or illness, stand to increase their quality of life by opening and listening to one another carefully. Treating disease was not originally intended to be a business""let us not manage patients as if they are soulless creatures. God gave us the tools (ears) not to be insensitive but to listen and aid those in pain. Everything God gave us has its purpose. Use them for the greater glory of the Lord!

America's health care system has become too complex and costly to continue business as usual. Best Care at Lower Cost explains that inefficiencies, an overwhelming amount of data, and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness. According to this report, the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost. The costs of the system's current inefficiency underscore the urgent need for a systemicwide transformation. About 38 percent of health spending in 2009--roughly \$759 billion--was wasted on unnecessary services, excessive administrative costs, fraud, and other problems. Moreover, inefficiencies cause needless suffering. By one estimate, roughly 75,000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state. This report states that the way health care providers currently train, practice, and learn new information cannot keep pace with the flood of research discoveries and technological advances. About 75 million Americans have more than one chronic condition, requiring coordination among multiple specialists and therapies, which can increase the potential for miscommunication, misdiagnosis, potentially conflicting interventions, and dangerous drug interactions. Best Care at Lower Cost emphasizes that a better use of data is a critical element of a continuously improving health system, such as mobile technologies and electronic health records that offer significant potential to capture and share health data better. In order for this to occur, the National Coordinator for Health Information Technology, IT developers, and standard-setting organizations should ensure that these systems are robust and interoperable. Clinicians and care organizations should fully adopt these technologies, and patients should be encouraged to use tools, such as personal health information portals, to actively engage in their care. This book is a call to action that will guide health care providers; administrators; caregivers; policy makers; health professionals; federal, state, and local government agencies; private and public health organizations; and educational institutions.

Health care seeks to prevent, diagnose, and treat disease and to improve the physical and mental well-being of all Americans. Across the lifespan, health care helps people stay healthy, recover from illness, live with chronic disease or disability, and cope with death and dying. Quality health care delivers these services in ways that are safe, timely, patient centered, efficient, and equitable. Unfortunately, Americans too often do not receive care that they need, or they receive care that causes harm. Care can be delivered too late or without full consideration of a patient's preferences and values. Many times, our system of health care distributes services inefficiently and unevenly across populations. Some Americans receive worse care than other Americans. These disparities may be due to differences in access to care, provider biases, poor provider-patient communication, and poor health literacy. Since 2003, the Agency for Healthcare Research and Quality (AHRQ) has reported on progress and opportunities for improving health care quality and reducing health care disparities. Guided by a subcommittee of AHRQ's National Advisory Council and a Department of Health and Human Services (HHS) Interagency Work Group, past reports were built on more than 250 measures categorized across six dimensions: effectiveness, patient safety, timeliness, patient centeredness, efficiency, and access to care. The Institute of Medicine (IOM) first provided guidance to AHRQ on the NHQR and NHDR in 2002. In 2008, AHRQ asked the IOM to offer suggestions for enhancing future reports and associated products to ensure that these reports raise awareness of the performance of the U.S. health care system. Findings from the 2010 NHQR and 2010 NHDR have been integrated into a single summary document. This is intended to reinforce the need to consider simultaneously the quality of health care and disparities across populations when assessing our health care system. The National Healthcare Reports Highlights seeks to address three questions critical to guiding Americans toward the optimal health care they need and deserve: What is the status of health care quality and disparities in the United States? How have health care quality and disparities changed over time? Where is the need to improve health care quality and reduce disparities greatest? The 2010 reports emphasize one of AHRQ's priority populations as a theme. This year, we present expanded analyses of care across the urban-rural continuum, and the National Healthcare Reports Highlights includes a summary of care received by residents of different types of geographic areas. Finally, this document summarizes information on eight national priorities identified by the IOM Committee and presents novel strategies for improving quality and reducing disparities from AHRQ's Health Care Innovations Exchange (HCIE). Four themes from the 2010 NHQR and 2010 NHDR emphasize the need to accelerate progress if the Nation is to achieve higher quality and more equitable health care in the near future. Health care quality and access are suboptimal, especially for minority and low-income groups; Quality is improving; access and disparities are not improving; Urgent attention is warranted to ensure improvements in quality and progress on reducing disparities with respect to certain services, geographic areas, and populations, including: Cancer screening and management of diabetes; States in the central part of the country;

Residents of inner-city and rural areas; Disparities in preventive services and access to care. Progress is uneven with respect to eight national priorities: Two are improving in quality: Palliative and End-of-Life Care and Patient and Family Engagement; Three are lagging: Population Health, Safety, and Access; Three require more data to assess: Care Coordination, Overuse, and Health System Infrastructure; All eight priority areas showed disparities related to race, ethnicity, and socioeconomic status.

This book demonstrates how to successfully manage and lead healthcare institutions by employing the logic of business model innovation to gain competitive advantages. Since clerk-like routines in professional organizations tend to overlook patient and service-centered healthcare solutions, it challenges the view that competition and collaboration in the healthcare sector should not only incorporate single-end services, therapies or diagnosis related groups. Moreover, the authors focus on holistic business models, which place greater emphasis on customer needs and put customers and patients first. The holistic business models approach addresses topics such as business operations, competitiveness, strategic business objectives, opportunities and threats, critical success factors and key performance indicators.The contributions cover various aspects of service business innovation such as reconfiguring the hospital business model in healthcare delivery, essential characteristics of service business model innovation in healthcare, guided business modeling and analysis for business professionals, patient-driven service delivery models in healthcare, and continuous and co-creative business model creation. All of the contributions introduce business models and strategies, process innovations, and toolkits that can be applied at the managerial level, ensuring the book will be of interest to healthcare professionals, hospital managers and consultants, as well as scholars, whose focus is on improving value-generating and competitive business architectures in the healthcare sector.

"...an important text for practitioners...this text is a valuable tool that develops self-inquiry skills." Journal of Advanced Nursing Reflection is widely recognised as an invaluable tool in health care, providing fresh insights which enable practitioners to develop their own practice and improve the quality of their care. Guided Reflection: A Narrative Approach to Advancing Professional Practice introduces the practitioner to the concept of guided reflection, in which the practitioner is assisted by a mentor (or 'guide') in a process of self-enquiry, development, and learning through reflection in order to effectively realise one's vision of practice and self as a lived reality. Guided reflection is grounded in individual practice, and can provide deeply meaningful insights into self-development and professional care. The process results in a reflexive narrative, which highlights key issues for enhancing healthcare practice and professional care. Reflection: A Narrative Approach to Advancing Professional Practice uses a collection of such narratives from everyday clinical practice to demonstrate the theory and practicalities of guided reflection and narrative construction. In this second edition, Chris Johns has explored many of the existing narratives in more depth. Many new contributions have been added including several more innovative reflections, such as performance and art. These narratives portray the values inherent in caring, highlight key issues in clinical practice, reveal the factors that constrain the quest to realise practice, and examine the ways practitioners work towards overcoming these constraints.
