Ninety percent of any Computing Science academic staff are involved with project work at some stage of their working life. Often they have no previous experience of how to handle it, and there are no written guidelines or reference books at the moment. Knowledge and practical experiences are often only disseminated from one institution to another when staff change jobs. This book is the first reference work to fill that gap in the market. It will be of use to lecturers

and course designers who want to improve their handling of project work in specific courses, and to department heads and deans who want to learn about overall strategic issues and experiences from other institutions.

The elderly population is growing and disabilities tend to increase with age. Professionals in the fields of human-computer interaction (HCI) are becoming increasingly aware of the needs of the elderly and people with disabilities. They also need to ensure that systems are designed for all, with specific consideration of these groups, not only computing systems but also other assistive and adaptive technologies such as information services and the use of smart cards, assistive robotics systems for travellers, and home and environmental control systems. This book will help designers worldwide find relevant guidelines for the design of human-computer interaction and ensure that systems are designed for all, with specific consideration of people who are elderly and people with disabilities. As a final year supervisor for twelve years on the degree, master and PhD, I have noticed time and time again students approach their thesis confused and unsure what is expected from them; and rightly so. What is involved in the write up of the final year thesis is not something students are introduced to during their studies. The structure, content, and format of a thesis are only understood by seeing good examples. A thesis is the largest assignment a student will ever likely to do and will resemble nothing they have done before. A final year thesis has to demonstrate academic structure, content, and integrity, something that is not always presented clearly by supervisors. As a supervisor, I designed a handout to help and guide my students. This handout became very popular and students shared it with their friends. After many years of editing and improving my notes, I have decided to publish it as a book. The second edition of the book comes with more examples. Taking away the fear of the writing up and having the confidence that a great thesis is achievable has helped my students focus instead on finishing creative, challenging, and inspiring projects.

This book is intended to fill a knowledge gap in the study of contemporary high-rise living. While there has been much documentation on the engineering and technological aspects of tall buildings, relatively little has been written about the social and livability of high-rise. Much less is written about Asian cities even though Asia is the current hotbed of high-rise development. Even though traditional discourse of high-rise housing is not always positive, new forces are redefining its place in 21st century urbanity. Many cities around the world are reembracing high-rise in urban agenda under current narrative of sustainable development. High-rise is fast becoming a priority area in international research agenda. The quest is for livable and sustainable high-rise development. Against the background of current trends--globalization, urbanization, mixed-use development, and new-built taller buildings in inner city areas in both developed and developing countries, this book examines the software: design, economics, estate management, legal and property rights, physical environment, planning, community development, and social dimensions of high-rise living. Analysis is with the widely acclaimed successful high-rise public housing

in Hong Kong and Singapore to understand the advantages and worries of high-rise living, and to distill the key points and lessons in the making of a 'good' highrise living environment. Hong Kong and Singapore have been constructing high-rise for more than four decades each. The majority of their population has moved to live in high-rise, selecting to live high-rise, and registering consistently high residential satisfaction. The height of apartment buildings in both cities continues to rise. The tallest is anticipated to be 70-storey. It is the contention of this book that contrary to earlier common negative discourses on public high-rise living, the high-rise environment may yet offer urban residents a satisfying dwelling experience. Leading housing academics, researchers and practitioners in the two cities have contributed to this book. This book presents a timely contribution to our understanding of a widening urban phenomenon that will affect a growing number of the world's population. how to write your nursing dissertation How to Write Your Nursing Dissertation provides nursing and healthcare students with authoritative information on developing, writing, and presenting an evidence-based practice healthcare dissertation, project or

Undertaking Capstone and Final Year Projects in Psychology serves a seminal purpose in guiding its readers to create a capstone project. The text employs traditional and emerging methodologies and methods in order to posit an exhaustive approach that the psychology students can adopt to see their project to fruition. The text aims at fortifying the reader's skills through the structure of its chapters as they begin to work on their capstone or final year project. The chapters collectively explore the varied aspects that are involved in the completion of a final year project, that is, beginning from the inception of the idea to laying the foundation, designing the project, analysing the data, and, finally, presenting the findings. The text guides the reader through each step and provides further guidance on approaching the idea, coming up with the research question, positioning it within the epistemological and ontological context, and constructing the theoretical framework to arrive at the optimal design solutions. The text will be useful for psychology students who are currently completing a capstone or a final year project. It is further aimed at psychology students who will subsequently be working on a project and are looking forward

Textbooks are symbols of centuries-old education. They're often outdated as soon as they hit students' desks. Acting "by the textbook" implies compliance and a lack of creativity. It's time to ditch those textbooks--and those textbook assumptions about learning In *Ditch That Textbook*, teacher and blogger Matt Miller encourages educators to throw out meaningless, pedestrian teaching and learning practices. He empowers them to evolve and improve on old, standard, teaching methods. *Ditch That Textbook* is a support system, toolbox, and manifesto to help educators free their teaching and revolutionize their classrooms. *Lab Reports and Projects in Sport and Exercise Science: A guide for students* provides a comprehensive overview of what should be contained within each section of a scientific report, and clearly explains how it should be presented. Written in a friendly and engaging style, it guides the reader through abstracts, literature reviews, methodology, reporting discussions and referencing, and contains a wealth of examples and practical advice on how to improve and refine your own writing.
