The incredible untold story of WWII's greatest secret fighting force, as told by our great modern master of wartime intrigue Britain's Special Air Service—or SAS—was the brainchild of

David Stirling, a young, gadabout aristocrat whose aimlessness in early life belied a remarkable strategic mind. Where most of his colleagues looked at a battlefield map of World War II's African theater and saw a protracted struggle

with Rommel's desert forces, Stirling saw an opportunity: given a small number of elite, well-trained men, he could parachute behind enemy lines and sabotage their airplanes and war material. Paired with his constitutional opposite,

the disciplined martinet Jock Lewes, Stirling assembled a revolutionary fighting force that would upend not just the balance of the war, but the nature of combat itself. He faced no little resistance from those who found his tactics

Do you have data that is not normally distributed and dont know how to analyze it using generalized linear models (GLM)? Beginning with a

discussion of fundamental statistical modeling concepts in a multiple regression framework, the authors extend these concepts to GLM (including Poisson regression, logistic regression, and proportional hazards models)

and demonstrate the similarity of various regression models to GLM. Each procedure is illustrated using real life data sets, and the computer instructions and results will be presented for each example. Throughout

the book, there is an emphasis on link functions and error distribution and how the model specifications translate into likelihood functions that can, through maximum likelihood estimation be used to

further their interpretations, critique data-reporting techniques, and evaluate procedures used to collect data. Each exercise covers a

limited number of statistics, making it easy to coordinate the exercises with lectures and a main textbook. The questions in each exercise are divided

into two parts: (1) Factual Questions and (2) Questions for Discussion. The factual questions require careful reading for details, while the

discussion questions show that interpreting statistics is more than a mathematical exercise. These questions require students to apply good judgment as well as
