Captain Ben Hawkins is finishing up a routine Army inspection at the Tupelo Chemical Research Facility when he discovers that several pounds of the nerve toxin VX-212 slated for destruction can't be accounted for. Soon an FBI team is on the trail of Mahmoud, who can't forget his father's fate in the Iraq-Iran war, and Saman, whose parents were on Iran Flight 655, shot down by the American cruiser, the USS Vincennes. Their hatred of the country they blame for their losses leads them to the United States for revenge. Colonel Kashani, a senior Iranian intelligence officer, stumbles upon the plan and he understands the dangers of enraging the American dragon. His challenge is to stop a terrorist plot without being ensnared by the FBI. And when the FBI investigation reaches a dead end, Hawkins must decide whether to risk his career-and possible arrest-to stop the attack, even if it means working with a foreign agent.

Emerging Research and Opportunities

New threats require new thinking. State attacks involving long-range missiles or conventional military forces are not the only threat to the U.S. homeland. Covert attacks by state actors, state use of proxies, independent terrorist and extremist attacks by foreign groups or individuals--and even by residents of the United States--are significant issues for future U.S. security. In this comprehensive work, Cordesman offers a range of recommendations, from reevaluating what constitutes a threat and bolstering homeland defense measures, to improving resource allocation and sharpening intelligence.

Hurricane Preparedness and Recovery by a Transportation Agency

A hurricane can be crippling to a regional transportation system such as the Hampton Roads District of Virginia. Preparedness and recovery by the highway agency, in coordination with localities and emergency services, is critical to minimizing the short, medium, and longterm effects of the event. In prior efforts, investigators characterized costs, risks, and benefits of managing spares of signs, signals, and lights in anticipation of hurricane damage (Lambert et al. 1998). In addition, use was made of probabilistic hurricane forecasts for inventory planning and operation. Based on the prior efforts, the research problem is identified as follows: (1) improving the basis for priority setting in recovery efforts; and (2) adoption elsewhere (i.e., in addition to sign-signal-light inventory) in the agency of risk-cost-benefit assessments and evaluation to improve the agency's preparedness and response capability.

Prologue

Emergency Medical Services (EMS) agencies regardless of service delivery model have sought guidance on how to better integrate their emergency preparedness and response activities into similar processes occurring at the local, regional, State, tribal, and Federal levels. This primary purpose of this project is to begin the process of providing that guidance as it relates to mass care incident deployment.

Our One Common Country explores the most critical meeting of the Civil War. Given short shrift or overlooked by many historians, the Hampton Roads Conference of 1865 was a crucial turning point in the War between the States. In this well written and highly documented book, James B. Conroy describes in fascinating detail what happened when leaders from both sides came together to try to end the hostilities. The meeting was meant to end the fighting on peaceful terms. It failed, however, and the war dragged on for two more bloody, destructive months. Through meticulous research of both primary and secondary sources, Conroy tells the story of the doomed peace negotiations through the characters who lived it. With a fresh and immediate perspective, Our One Common Country offers a thrilling and eye-opening look into the inability of our nation's leaders to find a peaceful solution. The failure of the Hamptons Roads Conference shaped the course of American history and the future of America's wars to come.
