"Maude Barlow is one of our planet's greatest water defenders." — Naomi Klein, bestselling author of This Changes Everything and The Shock Doctrine The Blue Communities Project is dedicated to three primary things: that access to clean, drinkable water is a basic human right; that municipal and community water will be held in public hands; and that single-use plastic water bottles will not be available in public spaces. With its simple, straightforward approach, the movement has been growing around the world for a decade. Today, Paris, Berlin, Bern, and Montreal are just a few of the cities that have made themselves Blue Communities. In Whose Water Is It, Anyway?, renowned water justice activist Maude Barlow recounts her own education in water issues as she and her fellow grassroots water warriors woke up to the immense pressures facing water in a warming world. Concluding with a step-by-step guide to making your own community blue, Maude Barlow's latest book is a heartening example of how ordinary people can effect enormous change.

*"Chris Abani's poetry resonates with a devastating beauty which cuts through to the heart of human strength."--Pride Hands Washing Water is Chris Abani's fourth poetry collection--a mischievous book of displacement, exile, ancestry, and subversive humor. The central section, "Buffalo Women," is a Civil War correspondence between lovers that plays on our assumptions about war, gender, morality, and politics. Sweetest Henri, I know we promised to be honest, one to the other, but your recent missive, though welcome as any epistle from you, filled me with a dread that clung like dampness to wet wood. I am terrified for your immortal soul, dear sweet Henri. This mad war of Lincoln is infecting you with a sickness too depraved to even address. . . . Abani's writing is ruthless, at times traumatic, and consistently filled with surprising twists and turns.*

*The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts.*

What’s so tough about building a solar collector? Most people think it’s time they tried to do their part at lowering their monthly utility bills or curbing climate change, but they suspect that their dream of building a hot water solar collector is more than they can handle. In some cases, this may be true. However, if you have already performed your own plumbing repairs, this project may not be as difficult as and more affordable than you imagine. This down-to-earth guide can show fifty-six clear illustrations, and a complete parts list from a major hardware store, you may fulfill your dream of going solar sooner than you think. This is an excellent book with clear and well thought out plans. With a little investment of time and the parts listed, you will have a worthy product that will save money and provide satisfaction. A. J. Shea I am very impressed with the plans for this solar hot water system. I think it was easy to understand and complete with material if anyone wanting to build their own solar collector, this is a great tool. Like others have said, follow the directions with respect to the materials specified. BigBear

*Water plays a key role in addressing the most pressing global challenges of our time, including climate change adaptation, food and energy security, environmental sustainability and the promotion of peace and stability. This comprehensive handbook explores the pivotal place of law and policy in efforts to ensure that water enables positive responses to these challenges and provides a basis for sound governance. The book reveals that significant progress has been made in recent decades to strengthen the governance of water resource management at different scales, including helping to address international and sub-national conflicts over transboundary water resources. It demonstrates that 'effective' laws and policies are fundamental drivers for the safe, equitable and sustainable utilization of water. However, it is also shown that what might constitute an effective law or policy related to water resources management is still hotly debated. As such, the handbook provides an important and definitive reference text for all studying water governance and management.*
