

Head Cases

Cases in Head and Neck Cancer: A Multidisciplinary Approach encompasses rich material and resources that demonstrate the complex interface between the diagnostic and clinical information necessary to successfully manage patients with head and neck cancer. This must-read book contains cases written by leading experts in the field that cover a wide variety of head and neck cancers (i.e., tongue base, tonsil, laryngeal, HPV related, etc.) and treatment options, including minimally invasive surgery such as robotic surgery and combined modality treatment protocols. Specifically, this text addresses comprehensive cases from initial evaluation, diagnosis, imaging, and other physiological tests to multidisciplinary treatment management (surgery, chemotherapy, and radiation therapy). Additionally, approaches for the management of toxicities or morbidities of cancer treatment are presented, as well as care plans, discharge plans, and caregiver burden and survivorship issues. Moreover, material on health literacy, humanistic care, and improving communication with assistive technology has been included. Written by clinicians specializing in speech-language pathology, otolaryngology, medical and radiation oncology, pathology, nurse case management, radiology, dietetics, among other fields, this collection of authors

provides one of the most complete presentations of the inner workings of the multidisciplinary care team. The adult cases of head and neck cancer reviewed in this text exemplify current practice issues surrounding HPV, minimally invasive robotic surgery and combined modality treatments. Each author threads introductory comments throughout the cases illustrating the critical role of the speech-language pathologist, in particular, and how all clinicians must address coping with survivorship and caregiver burden issues. Cases in Head and Neck Cancer intends to teach future medical practitioners how to approach the complexities associated with head and neck cancer. Its vast number of images and videos allow for experiential driven classroom activities. This text will be an invaluable resource for the education of speech-language pathologists, medical students, nurse care managers, dieticians, and any person involved in a head and neck cancer team.

While philosophy and psychoanalysis privilege language and conceptual distinctions and mistrust the image, the philosopher and psychoanalyst Julia Kristeva recognizes the power of art and the imagination to unblock important sources of meaning. She also appreciates the process through which creative acts counteract and transform feelings of violence and depression. Reviewing Kristeva's corpus, Elaine P. Miller considers the intellectual's "aesthetic

idea" and "thought specular" in their capacity to reshape depressive thought on both the individual and cultural level. She revisits Kristeva's reading of Walter Benjamin with reference to melancholic art and the imagination's allegorical structure; her analysis of Byzantine iconoclasm in relation to Freud's psychoanalytic theory of negation and Hegel's dialectical negativity; her understanding of Proust as an exemplary practitioner of sublimation; her rereading of Kant and Arendt in terms of art as an intentional lingering with foreignness; and her argument that forgiveness is both a philosophical and psychoanalytic method of transcending a "stuck" existence. Focusing on specific artworks that illustrate Kristeva's ideas, from ancient Greek tragedy to early photography, contemporary installation art, and film, Miller positions creative acts as a form of "spiritual inoculation" against the violence of our society and its discouragement of thought and reflection.

Head Cases takes us into the dark side of the brain in an astonishing sequence of stories, at once true and strange, from the world of brain damage. Michael Paul Mason is one of an elite group of experts who coordinate care in the complicated aftermath of tragic injuries that can last a lifetime. On the road with Mason, we encounter survivors of brain injuries as they struggle to map and make sense of the new worlds they inhabit. Underlying each of these survivors' stories is an exploration of the brain and its mysteries. When injured, the brain must figure out how to heal itself, reorganizing its physiology in order to do the job. Mason gives us a series of vivid glimpses into brain science, the last frontier of medicine, and we come away in awe of the miracles of the brain's workings and astonished at the fragility of the brain and the sense of self, life, and order that resides there. Head Cases "[achieves] through sympathy and curiosity insight like that which pulses through genuine literature" (The New York Sun); it is at once illuminating and deeply affecting.

"Stories of human behavior at its most extreme....With humor, compassion, empathy, and insight, Small searches for and finds the

humanity that lies hidden under even the most bizarre symptoms.”
—Daniel H. Pink, author of *Drive* and *A Whole New Mind* A psychiatrist’s stories of his most bizarre cases, *The Naked Lady Who Stood on Her Head* by Gary Small, M.D., and Gigi Vorgan—co-authors of *The Memory Bible*—offers a fascinating and highly entertaining look into the peculiarities of the human mind. In the vein of *The Man Who Mistook His Wife for a Hat*, *Awakenings*, and the other bestselling works of Oliver Sacks, *The Naked Lady Who Stood on Her Head* surprises, enthralls, and illuminates as it focuses on medical mysteries that would stump and amaze the brilliant brains on *House, M.D.*

Excerpt from *Reports of Cases in Law and Equity, Argued and Determined in the Supreme Court of Georgia, at Atlanta, Vol. 60: January and Part of August Terms, 1878* By act of 1866 (section 4270 of the Code,) the decisions of the supreme court are required to be announced by written synopses of the points decided. The decisions thus announced from the bench by Judges bleckley and jackson are made the head-notes to the cases. The decisions announced by Chief Justice warner are published as his opinions, the head-notes being made by the reporter. All other head-notes by the reporter are

This evidence-based guide to the current management of cancer cases at all head and neck sites will assist in the appropriate selection and delineation of

tumor volumes/fields for intensity-modulated radiation therapy (IMRT), including volumetric modulated arc therapy (VMAT). Each tumor site-related chapter presents, from the perspective of an academic expert, several actual cases at different stages in order to clarify specific clinical concepts. The coverage includes case presentation, a case-related literature review, patient preparation, simulation, contouring, treatment planning, treatment delivery, and follow-up. The text is accompanied by illustrations ranging from slice-by-slice delineations on planning CT images to finalized plan evaluations based on detailed acceptance criteria. The book will be of value for residents, fellows, practicing radiation oncologists, and medical physicists interested in clinical radiation oncology

Lalwani (physiology and neuroscience, New York University School of Medicine) presents essential information on medical and surgical management of disorders and

diseases of the ear, nose, throat, and neck, for specialists, non-specialists, ancillary health care personnel, and students. The book emphasizes practical features of diagnosis and patient management while providing a discussion of pathophysiology and relevant basic and clinical science. Overview chapters review principles of antimicrobial therapy, anesthesia, radiology, and lasers, followed by chapters arranged by anatomical region. B&w medical images and photos are included. Annotation : 2004 Book News, Inc., Portland, OR (booknews.com).

This book *Image-Based Case Studies in ENT (Head and Neck Surgery)*, written in concise, practical management-based approach which will be invaluable as a reference book to clinicians ranging from the busy general practitioner or medical students to specialist in updating their knowledge. The book provides numerous latest clinical cases in brilliant pictures as it would be encountered in daily clinical practice and covers current, up-to-date surgical techniques and evidence-based management. The cases were carefully selected to represent the main issue of particular question. The book is divided.

In his most extraordinary book, the bestselling author of *Awakenings* and "poet laureate of medicine" (The New York Times) recounts the case histories of patients inhabiting the compelling world of neurological disorders, from those who are no longer able to recognize common objects to those who gain extraordinary new skills. Featuring a new preface, Oliver Sacks's *The Man Who Mistook His Wife for a Hat* tells the stories of

individuals afflicted with perceptual and intellectual disorders: patients who have lost their memories and with them the greater part of their pasts; who are no longer able to recognize people and common objects; whose limbs seem alien to them; who lack some skills yet are gifted with uncanny artistic or mathematical talents. In Dr. Sacks's splendid and sympathetic telling, his patients are deeply human and his tales are studies of struggles against incredible adversity. A great healer, Sacks never loses sight of medicine's ultimate responsibility: "the suffering, afflicted, fighting human subject."

Head Trauma Cases

A 32-year-old Caucasian lady was admitted to hospital following a collapse at the gym. Her friends described the patient falling to the floor while exercising on the rowing machine, followed by twitching of her arms and legs and a period of being unrousable. You are the medic on duty... 100 Cases in Acute Medicine presents 100 acute conditions commonly seen by medical students and junior doctors in the emergency department, or on the ward, or in the community setting. A succinct summary of the patient's history, examination, and initial investigations, including photographs where relevant, is followed by questions on the diagnosis and management of each case. The answer includes a detailed

discussion of each topic, with further illustration where appropriate, providing an essential revision aid as well as a practical guide for students and junior doctors. Making clinical decisions and choosing the best course of action is one of the most challenging and difficult parts of training to become a doctor. These cases will teach students and junior doctors to recognize important clinical symptoms and signs, and to develop their diagnostic and management skills.

366 cases and more than 3000 images help you accurately interpret head and neck imaging Head and Neck Imaging Cases uses 366 cases and more than 3000 images to familiarize you with imaging findings of common head and neck diseases and conditions encountered in daily practice. Rarer diseases that have typical image findings as well as normal variants and benign conditions that may be mistaken as abnormalities or malignancies are also included. Reflecting real-world practice, CT and MRI are the main modalities illustrated throughout the book. In addition, you will find cases utilizing fluoroscopy, PET-CT, conventional angiogram/interventional radiology, and radiotherapy/radiosurgery. The book 's easy-to-navigate organization is specifically designed for use at the workstation. The concise, quick-scan

Head Cases

Use this work for the practical distillation of the anatomy and biomechanics of closed-head injury, associated physical and psychiatric disorders, treatment and vocational assessment, and case-handling tips for plaintiff and defense counsel. This gives you the detailed medical knowledge you need to understand the injury -- its causes and physical mechanics. It also covers the legal techniques and cases to evaluate and successfully try or settle closed-head injury cases. Sixteen-year-old Jacques Rebière is living a humble life in rural France, studying butterflies and frogs by candlelight in his bedroom. Across the Channel, in England, the playful Thomas Midwinter, also sixteen, is enjoying a life of ease--and is resigned to follow his father's wishes and pursue a career in medicine. A fateful seaside meeting four years later sets the two young men on a profound course of friendship and discovery; they will become pioneers in the burgeoning field of psychiatry. But when a female patient at the doctors' Austrian sanatorium becomes dangerously ill, the two men's conflicting diagnosis threatens to divide them--and to undermine all their professional achievements.

From the bestselling author of *Birdsong* comes this masterful novel that ventures to answer challenging questions of consciousness and science, and what it means to be human.
