This paper is published alongside the Government white paper "Caring for our future: reforming care and support" (Cm. 8378, ISBN 9780101837828). The draft Bill takes forward the recommendations of the Law Commission report on adult social care (Law Com. 326, HC 941, session

2010-12, ISBN 9780102971682) which concluded that existing care and support legislation was outdated and confusing, making it difficult for people who need care and support, and carers, to know what they are entitled to and for local authorities to understand their responsibilities. The Bill will: modernise and consolidate the law, clarify entitlements; support broader needs of local communities; simplify the care and support system and processes. Key provisions include: statutory principles which embed the promotion of individual well-being; clear legal entitlements; everyone, including carers, should have a personal budget as part of their care and support plan; duties to ensure care and support continues when a person moves to a different local authority area; a new statutory framework for adult safeguarding. Others sections cover the establishment of Health Education England and the Health Research Authority, and allow for the abolition (subject to consultation) of the Human Fertilisation and Embryology Authority and Human Tissue Authority.

The British Industrial Revolution has long been seen as the spark for modern, global industrialization and sustained economic growth. Indeed the origins of economic history, as a discipline, lie in 19th-century European and North American attempts to understand the foundation of this process. In this book, William Ashworth questions some of the orthodoxies concerning the history of the industrial revolution and offers a deep and detailed reassessment of the subject that focuses on the State and its role in the development of key British manufactures. In particular, he explores the role of State regulation and protectionism in nurtu

Britain's negligible early manufacturing base. Taking a long view, from the mid 17th century through to the 19th century, the author weaves together a vast range of factors to provide one of the best analyses of the industrial revolution, and one that places it firmly within a global context, showing that the Industrial Revolution was merely a short moment within a much larger and longer global trajectory. This book is an important intervention in the debates surrounding modern industrial history and will be essential reading for anyone interested in global and comparative economic history and the history of globalization.
