Tooley's Handbook for Map Collectors

Growing urban populations have resulted in the development of marginal land and brownfield sites as well as increasing the desirability of maximum utilisation of underground space. As a result, there is an increasing need for urban planners and developers to understand the geotechnical and geo-environmental issues involved in urban construction. Hidden aspects of urban planning aims to raise the awareness of geotechnical and geoenvironmental issues among urban planners and within the urban planning frameworks across Europe.

The networks and information systems of today are evolving rapidly. There are new trends and applications in information networking such as wireless sensor networks, ad hoc networks, peer-to-peer systems, vehicular networks, opportunistic networks, grid and cloud computing, pervasive and ubiquitous computing, multimedia systems, security, multi-agent systems, high-speed networks, and web-based systems. These kinds of networks need to manage the increasing number of users, provide support for different services, guarantee the QoS, and optimize the network resources. For these networks, there are many research issues and challenges that should be considered and find solutions. The aim of the book “Advances in Network-Based Information Systems” is to provide latest research findings, innovative research results, methods, and development techniques from both theoretical and practical perspectives related

to the emerging areas of information networking and their applications.

The Rough Guide to Finland

Writers know only too well how long it can take—and how awkward it can be—to describe spatial relationships with words alone. And while a map might not always be worth a thousand words, a good one can help writers communicate an argument or explanation clearly, succinctly, and effectively. In his acclaimed *How to Lie with Maps*, Mark Monmonier showed how maps can distort facts. In *Mapping it Out: Expository Cartography for the Humanities and Social Sciences*, he shows authors and scholars how they can use expository cartography—the visual, two-dimensional organization of information—to heighten the impact of their books and articles. This concise, practical book is an introduction to the fundamental principles of graphic logic and design, from the basics of scale to the

complex mapping of movement or change. Monmonier helps writers and researchers decide when maps are most useful and what formats work best in a wide range of subject areas, from literary criticism to sociology. He demonstrates, for example, various techniques for representing changes and patterns; different typefaces and how they can either clarify or confuse information; and the effectiveness of less traditional map forms, such as visibility base maps, frame-rectangle symbols, and complementary scatterplot designs for conveying complex spatial relationships. There is also a wealth of practical information on map compilation, cartobibliographies, copyright and permissions, facsimile reproduction, and the evaluation of source materials. Appendixes discuss the benefits and limitations of electronic graphics and pen-and-ink drafting, and how to work with a cartographic illustrator. Clearly written, and filled with real-world examples, Mapping it Out demystifies mapmaking for anyone writing in the humanities and social sciences. "A useful guide to a subject most people probably take too much for granted. It shows how map makers translate abstract data into eye-catching cartograms, as they are called. It combats cartographic illiteracy. It fights cartophobia. It may even teach you to find your way."—Christopher Lehmann-Haupt, The New York Times Get Ready For The Adventure Of A Lifetime! The northern Chinese mountain range of Mount Wutai has been a preeminent site of international pilgrimage for over a millennium. Home to more than one hundred temples, the entire range is considered a Buddhist paradise on earth, and has received visitors ranging from emperors to monastic and lay devotees. Mount Wutai explores how Qing Buddhist rulers and clerics from Inner Asia, including Manchus, Tibetans, and Mongols, reimagined the mountain as their own during the eighteenth and nineteenth centuries. Wen-Shing Chou examines a wealth of original source materials in multiple languages and media--many never before published or translated—such as temple replicas, pilgrimage guides, hagiographic representations, and panoramic maps. She shows how literary, artistic, and architectural depictions of the mountain permanently transformed the site's religious landscape and redefined Inner Asia's relations with China. Chou addresses the pivotal but previously unacknowledged history of artistic and intellectual exchange between the varying religious, linguistic, and cultural traditions of the region. The reimagining of Mount Wutai was a

fluid endeavor that proved central to the cosmopolitanism of the Qing Empire, and the mountain range became a unique site of shared diplomacy, trade, and religious devotion between different constituents, as well as a spiritual bridge between China and Tibet. A compelling exploration of the changing meaning and significance of one of the world's great religious sites, Mount Wutai offers an important new framework for understanding Buddhist sacred geography.

You can count on Rick Steves to tell you what you really need to know when traveling in St.

Petersburg, Helsinki, and Tallinn. In this compact guide, Rick Steves covers the essential spots of each city, including the Hermitage, the Church of the Spilled Blood, Linnanmäki (a classic amusement park), and Toompea Castle. Take a day trip to the Peterhof, stroll through Kaivopuisto Park, or visit the Kumu Art Museum. You'll get Rick's firsthand advice on the best sights, eating, sleeping, and nightlife, and the maps and self-guided tours will ensure you make the most of your experience. More than just reviews and directions, a Rick Steves Snapshot guide is a tour guide in your pocket. Rick Steves Snapshot guides consist of excerpted chapters from Rick Steves European country guidebooks. Snapshot guides are a great choice for travelers visiting a specific city or region, rather than multiple European destinations. These slim guides offer all of Rick's up-to-date advice on what sights are worth your time and money. They include good-value hotel and restaurant recommendations, with no introductory information (such as overall trip planning, when to go, and travel practicalities).

Spatial Intelligence examines public and professional conceptions of the relationships between thinking about spatial attributes and active engagement in spatially related constructions and designs. Even though children's and adolescents' spatial propensities in constructive activities parallel the skills needed by professionals in both established and emerging fields, spatial education is often missing from K-12 curricula and is easily impeded by teachers, parents, or other individuals who do not provide contexts in formalized settings,

such as schools, to nurture its potential. This book bridges the gap by linking the natural spatial inclinations, interests, and proclivities of individuals from a variety of cultures with professional training and expertise in engineering, architecture, science, and mathematics. Educators will be better able to achieve the skills and awareness necessary to provide children and young adults with the vital opportunities inherent in spatial education.

Writing the City

Hidden Aspects of Urban Planning

'The expression of human experience it embodies ... includes all personal history'. Saul Bellow's view of the city is far from that of classic geographical descriptions which look at growth or decline, demographic patterns, traffic flows and economic potential: these empirically conceived models of urban geography fail to accommodate the crucial human aspect of city life.

Located at the interface of geography and literature, *Writing the City* visualizes the city through the hopes, aspirations, disappointments and pains of international novelists and creative writers. From Manchester, Montreal and Sydney to Osaka, Varanasi and Odessa, cities become more than their built environment, more than a set of class or economic relationships: they are also an experience to be lived, suffered and undergone. Thus cities are seen in terms of the innocence of an Eden now
