

Hermle Clock Replacement Parts

The most comprehensive and most up-to-date, Step by Step Repair Manual for Cuckoo Clock Owners. 220 pages and hundreds of photos and diagrams. Why does a Cuckoo Clock stop Working? Most likely it is because the works are dirty, needs oiling or most likely both. When the clock stops, think of it as the oil light is on. It's a cry for help. Without oil, the metal parts grind on each other causing serious wear and damage. Oil also attracts dust which can make the oil 'gummy' and add drag to its operation until it can no longer overcome the friction. This book will teach you how to get it running happily again. Covered: Regula, Baduf, Hubert Herr, Schatz, Rack & Snail, Count Wheel, Bellows and Weights, Movement ID, Cleaning and Oiling, Complete Step by Step Repair Procedure.

In the 18th century, Newport, Rhode Island, was home to some of the most skillful craftsmen in colonial North America. Among them were the clockmakers William Claggett (1694-1748), James Wady (d. 1759), and Thomas Claggett (1730-1797)--individuals whose surviving works became the best-known records of their lives. Although the clockmaking industry flourished in an era widely considered as a golden age of prosperity in Newport, their stories remained elusive, with a few magnificent clocks the only testament to their place in pre-Revolutionary New England. Through a broad search of archival records and a hunt to locate and document not only the work of these artisans--featured here in stunning new photography--but also their interconnected lives, the authors offer a more accurate picture of these three men, their trade, and aspects of life in contemporary Newport. The resulting volume reveals their stories and extraordinary works: an important contribution to the history of masterful craftsmanship in Rhode Island.

First published in 1953, this authoritative work, which was based on a lifetime's practical experience, has been in continuous demand and is recognized as a classic work on the subject. Its great strength lies in the descriptions and principles of watch and clock construction in an easy-to-follow manner. The book opens with a description of the various tools and materials essential for good work; details are then given concerning the construction and repair of the various types of movement, trains, motion work and gearing, the various forms of escapement, keyless mechanisms, balances and balance springs, pendulums, striking and repeating mechanisms, calendars, chronograph work and chronometers. The subject of cleaning is given careful consideration, while filing and turning, the two most important operations in watch and clock making, are given special attention. The construction of specialist tools for repair work, many of which were designed by the author, is explained in some detail and illustrated by working drawings. In addition, an appendix lists the various causes of failure and bad time-keeping.

Longcase clocks were invidually hand-made during the golden age of change that took place between the late seventeenth and mid-nineteenth centuries. Longcase clocks with their seventeenth century clock-making technology were innovative and incorporated an accurate pendulum clock within an attractive piece of domestic furnishing. This invaluable book is essential reading for all those who own and collect longcase clocks as well as clock repairers, horologists and conservationists. The authors provide detailed information about how longcase clocks work and how they are made.

They also cover the theory and the 'best practice' practical steps that are required in longcase clock maintenance, restoration and conservation. The book outlines the history and horological development of longcase clocks; describes how longcase clocks can be dated; considers materials, tools and equipment; examines the movement and the associated simple, and more difficult, workshop procedures; covers maintenance and effective repairs; explains the more difficult woodwork procedures. Superbly illustrated with 300 colour photographs. Nigel Barnes and Austin Jordan provide

advice and guidance in the field of antique horology and regularly run weekend courses.
