The purpose of this study was to determine what the effects of virtual patient simulation instruction are on the learning outcomes of students in an Associate of Science medical-surgical nursing education course. Using a causal-comparative design, this study fills a gap in the literature and adds to the body of knowledge of this instructional strategy to bridge theory to practice in the classroom. Data were acquired from the HESI Exit Examination™, which is administered the last semester of the nursing program. Data were collected for the Summer 2014 through Spring 2016 academic semesters. Additionally, data were acquired from the HESI Mid-Curricular Exam™ during the Summer 2014 through Spring 2015 academic semesters prior to entering the 2nd year of nursing. A post-course "satisfaction with current learning" subsection of the Student Satisfaction and Self-Confidence in Learning survey was administered to assess student satisfaction with the virtual patient simulation. Participants were undergraduate 2nd-year medical-surgical nursing students at one rural public community college. Test scores were collected for students for the 6 semesters from Summer 2014 to Spring 2016. Students who took the course during Fall 2015 and Spring 2016 also completed the satisfaction survey. To be included in the study, students had a grade point average (GPA) of 2.0 or greater in nursing coursework, and had not failed out of the nursing program or the medical-surgical nursing course. Findings revealed no differences between students who received traditional instruction and virtual patient simulation instruction. Satisfaction with the virtual patient simulation instruction was mixed, with the Fall 2015 group being undecided and the Spring 2016 group being satisfied based upon the 5-point Likert-type survey. These results support the hypothesis that virtual patient simulation is comparable to traditional instruction. This study provides evidence that virtual patient simulation is as good as traditional clinical instruction in achieving the student learning outcomes in an associate of science in medical-surgical nursing course.

The Nurse Educators Guide to Assessing Learning Outcomes

This must-have workbook helps students learn the prioritization and delegation skills needed to survive nursing school, pass the NCLEX-RN® examination, and make the transition to practice in today's healthcare environment. Consisting of three parts plus an answer key, this resource provides numerous opportunities for students to review cases and answer questions similar to those they will see on the NCLEX-RN examination - including questions in alternate-item formats. Part 1, written by delegation expert Ruth Hansten, is an introduction that provides a practical review of clinical delegation skills and serves as a framework for the exercises that follow. Part 2 consists of cases of patients who have relatively straightforward health problems followed by NCLEX examination-style questions focusing on prioritization, delegation, and assignment. Part 3 consists of complex, unfolding cases involving patients who have multiple health conditions, as well as complex patient assignments. An introduction by prioritization and delegation expert Ruth Hansten explains the importance of developing sound clinical skills and judgment in the areas of prioritization, delegation, and assignment. NCLEX-style questions help students develop fundamental skills in prioritization, delegation, and assignment and become familiar with the NCLEX examination format. Questions in Parts 2 and 3 are organized by body system and by complexity, respectively, to allow for easy use with any medical-surgical nursing text. Both sections of exercises give students essential hands-on practice in prioritizing (deciding what to do first), delegating (giving specific tasks to assistive personnel and supervising satisfactory completion of those tasks), and assignment (giving responsibility for the overall care of particular patients to appropriate personnel). The questions in Part 3 are more complex than those in Part 2, allowing students to master core concepts using unambiguous cases before applying this knowledge to patients with more complicated, multidimensional case presentations. Flexible organization allows the workbook to be used with any Elsevier medical-surgical nursing text. The answer key provides rationales for correct as well as incorrect answers, reinforcing the concepts presented in each unit. Questions follow NCLEX style, and about 10% represent the new alternate-item question format. The workbook is three-hole punched and perforated for convenience.

This unique review book organizes questions according to Client Needs, the areas covered in the latest NCLEX examination test plan. Rationales are provided for all answer choices, plus test-taking strategies, and references to Elsevier nursing textbooks. This review includes many critical thinking and alternate item formats, plus a comprehensive exam consisting of 300 questions.

The Nurse Educator's Guide to Assessing Learning Outcomes, Third Edition is a widely-used resource for both faculty and nursing education students that covers the assessment of critical thinking, the development of learning objectives, and the creation of tests, including detailed tips for writing many kinds of individual test items. The Nurse Educator's Guide to Assessing Learning Outcomes

**"Nursing school did not adequately prepare me for this role" and "Why didn't anyone tell me about this when I was a student?" are commonly heard complaints from new nurses during their first two "rite of passage" years following graduation. But this transition to professional practice—fraught with challenges, anxiety, triumphs, and tears—does not have to be so difficult. The Nurse Professional helps novices prepare for their transition into a "real world" role from being a student through graduation, NCLEX success, job search, first job, and beyond. It is the only book to cover all of the steps that new nurses must take to ensure a smooth transition into the professional role. The author is a nurse educator and mentor with extensive experience in recruiting and orienting nurses. Dr. Hunt is also co-founder of the Nurse Advocacy Forum, providing advocacy, support, networking, professional development, leadership, and mentoring to students and new graduate nurses. She offers sound advice regarding the most current issues facing new nurses and practical strategies for obtaining a job of one's choice, describes steps to take well before graduation to ensure a smooth transition to professional practice, and addresses the various indicators of academic achievement that are required for employment at some nursing facilities. She also discusses the benefits of externships, internships, professional development, and networking, how to develop a winning portfolio, and how to successfully transition into professional practice. This book provides information on workplace bullying and how to deal with it; the importance of self-care, self-advocacy, and networking; writing a résumé; interview skills; and much more. "Top 10 Tips" in each chapter concisely highlight important topics. Samples of useful forms and documents are available in chapter appendices. A PowerPoint presentation and templates for role play/simulation scenarios for faculty use are also available. Key Features:**

- "Top 10 Tips" in chapters concisely highlight important topics
- Samples of useful forms and documents are available in chapter appendices
- Delivers specific, practical strategies and exercises for a successful transition and entry into practice
- Written by an experienced nurse/educator and nurse mentor who has extensive experience regarding how new nurses transition into practice

A significant body of knowledge is the basis for a holistic, caring and scientific evidence-based nursing education in practice for professional development. Quality teaching leads to good learning and both aspects are two of the main issues of quality assurance in nursing education today. To begin with, not all nursing students have the same levels of motivation or learning abilities. It is with cognisance of providing quality care for patients that the role of the nurse educator has to be to enhance nursing students' learning using scientific evidence based teaching. Research around teaching and learning processes is an important part of the delivery of quality education, which in turn impacts on students' learning results and experiences, thereby, ensuring holistic biopsychosocial care to patients. The main aim of teaching and learning in nursing, at all levels, is to enhance the nurses' contribution to assist the individuals, families and communities in promoting and preserving health, well-being and to efficiently respond to illnesses. We hope that this book can be used as a resource to increase the body of knowledge in teaching and learning in nursing, thereby enhancing the role and contribution of health care professionals to clinical practice.

The poems in this sequence of fifty-four were written to encompass one year, from summer to summer. Their principal themes are the stasis, both stultifying and provocative, of midsummer in the tropics; the pull of the sea, family, and friendship on one whose circumstances lead to separation; the relationship of poetry to painting; and the place of a poet between two cultures. Walcott records, with his distinctive linguistic blend of soaring imagery and plainly stated facts, the experience of a mid-lief period--in reality and in memory or the imagination.

As Louis Simpson wrote on the publication of Walcott's *The Fortunate Traveller*, "Walcott is a spellbinder. Of how many poets can it be said that their poems are compelling--not a mere stringing together of images and ideas but language that delights in itself, rhythms that seem spontaneous, scenes that are vividly there?...The poet who can write like this is a master."
