

History Memo 2013 Grade 10 Final Paper

The “exciting” true story of a downed cargo plane and a group of stranded U.S. Army medical personnel fighting to survive in Nazi-occupied Albania (The Bowling Green Daily News). A Wall Street Journal Bestseller An Edgar Award Finalist and Anthony Award Finalist for Best Critical or Non-Fiction Work When twenty-six Army nurses and medics—part of the 807th Medical Air Evacuation Transport Squadron—boarded a cargo plane for transport in November 1943, they never anticipated the crash landing in Nazi-occupied Albania that would lead to a months-long struggle for survival. In a drama that captured the attention of the American public, the group and its flight crew dodged bullets and battled blinding winter storms as they climbed mountains and fought to stay alive, aided by courageous villagers who risked death at Nazi hands to help them. A mesmerizing tale of the heroism of ordinary people, The Secret Rescue tells a story of endurance kept secret for decades, and of the daring rescue attempts by clandestine American and British organizations amid the tumultuous landscape of the war. “Combines all of the elements that draw us to WWII stories: the daring of The Guns of Navarone, the suspense of The Great Escape, and the bravery reminiscent of Met by Moonlight. It’s the inclusion of so many women, though, that makes this story unique.” —Booklist
This book explores the unique relationship between two different approaches to understand the nature of knowledge, reality, and existence. It collects essays that examine the distinctive historical relationship between mathematics and philosophy. Readers learn what key philosophers throughout the ages thought about mathematics. This includes both thinkers who recognized the relevance of mathematics to their own work as well as those who chose to completely ignore its many achievements. The essays offer insight into the role that mathematics played in the formation of each included philosopher’s doctrine as well as the impact its remarkable expansion had on the philosophical systems each erected. Conversely, the authors also highlight the ways that philosophy contributed to the growth and transformation of mathematics. Throughout, significant historical examples help to illustrate these points in a vivid way. Mathematics has often been a favored interlocutor of philosophers and a major source of inspiration. This book is the outcome of an international conference held in honor of Roshti Rashed, a renowned historian of mathematics. It provides researchers, students, and interested readers with remarkable insights into the history of an important relationship throughout the ages.

This volume explores the relationship between cities and railways over three centuries. Despite their nearly 200-year existence, The City and the Railway in the World shows that urban railways are still politically and historically important to the modern world. Since its inception, cities have played a significant role in the railway system; cities were among the main reasons for building such efficient but lavish and costly modes of transport for persons, goods, and information. They also influenced the technological appearance of railways as these have had to meet particular demands for transport in urban areas. In 25 essays, this volume demonstrates that the relationship between the city and the railway is one of the most publicly debated themes in the context of daily lives in growing urban settings, as well as in the second urbanisation of the global South with migration from rural to urban landscapes. The volume’s broad geographical range includes discussions of railway networks, railway stations, and urban rails in countries such as India, Japan, England, Belgium, Romania, Nigeria, the USA, and Mexico. The City and the Railway in the World will be a useful tool for scholars interested in the history of transport, travel, and urban change.

This collection of essays offers a fresh look at the 1970s, the crucial decade when the nuclear non-proliferation regime took shape. Exploring a broad array of newly declassified archival sources from different countries across the globe, and moving freely across methodological and national barriers, historians from Europe, North and South America, Asia and Africa discuss the making of the global nuclear order from truly international and transnational perspectives. The result is a fascinating and innovative volume which will remain an essential reference for historians of the nuclear age, of the cold war, and more generally of the evolution of the international system in the second half of the twentieth century. The chapters in this book were originally published as a special issue of The International History Review.

Choosing Hope

A Concise History of Afghanistan in 25 Volumes

In Search of History

This book challenges institutions and their programs to prioritize the use of chronological assessment results to benefit enrolled students in comparison with the more common practice of prolonged assessment cycles that generally benefit future students. Peggy Maki advocates for real-time assessment processes to identify patterns of underperformance and obstacles that require timely interventions for enrolled students to succeed. In tandem with the sets of educational practices and policies that many institutions have now undertaken to close achievement and graduation rates across our diverse student demographics, such as developing clear degree pathways, she calls on all higher education providers – if they are to remain relevant and meet their social purpose in our complex world – to urgently recalibrate their assessment processes to focus on currently enrolled students’ progress towards achieving a high-quality degree, regardless of when they matriculate or re-enter higher education. She demonstrates that we already have sufficient examples and evidence to implement real-time assessment of students as they progress through their studies. She draws on the practices of specialized accredited programs, such as those in the professions that assess in real time; on the experiences of institutions that have adopted competency-based education; and on the affordances of technologies that now provide faculty and students with up-to-the-minute diagnostics. She identifies the six principles necessary to implement a real-time assessment process, illustrated by case studies of how campuses have operationalized them to advance students’ equitable progress towards achieving a high-quality degree; and demonstrates the benefits of real-time assessment compared to more future-oriented processes, among which is engaging students in reflecting on their own progress along their degree pathways. She advocates for the use of well documented national outcomes-based frameworks such as Liberal Education and America’s Promise (LEAP), its aligned Valid Assessment of Learning in Undergraduate Education scoring rubrics (VALUE), the Degree Qualifications Profile, and discipline-based outcomes assessments to ensure high-quality degrees that meet well-defined standards and criteria. She also identifies how data systems and technological developments help to monitor closely and respond in time to students’ patterns of underperformance. The book is an urgent call for higher education to achieve the values of equity, transparency and quality it espouses; and ensure that all students graduate in a timely fashion with the competencies they need to be active and productive citizens.

An accounting study guide with questions, and answers is a helpful tool for anyone that is taking an an accounting class. An accounting course book covers topics extensively. With the study guide the person can take the quizzes, and check their answers. The study guide shows which answer is correct. Some study guide books will explain why the other answers is close, but not correct. Once the person takes the quiz on a specific topic. They will find out where their weakness is, and what areas they have to study. The book will help them prepare for class exams, and any professional exams they may take.

Updated to the latest data and expert information, the Third Edition of Nutrition for the Older Adult introduces students to the unique nutritional needs of this growing population. Designed for the undergraduate, the text begins by covering the basics, including the demographics of aging, physiology of aging, and vitamin and mineral requirements for older adults. It then delves into clinical considerations, including the nutritional implications of diseases and conditions common among older adult. Additional coverage includes: nutritional assessment, pharmacology, nutritional support, and much more. With new pedagogical features along with revamped end-of-chapter activities and questions, Nutrition for the Older Adult is an essential resource for students in the fields of nutrition, nursing, public health and gerontology.

In post-Soviet Russia, there is a persistent trend to repress, control, or even co-opt national history. By reshaping memory to suit a politically convenient narrative, Russia has fashioned a good future out of a “bad past.” While Putin’s regime has acquired nearly complete control over interpretations of the past, The Future of the Soviet Past reveals that Russia’s inability to fully rewrite its Soviet history plays an essential part in its current political agenda. Diverse contributors consider the many ways in which public narrative shapes Russian culture—from cinema, television, and music to museums, legislature, and education—as well as how patriotism reflected in these forms of culture implies a casual acceptance of the valorization of Stalin and his role in World War II. The Future of the Soviet Past provides effective and nuanced examples of how Russia has reimagined its Soviet history as well as how that past still influences Russia’s policymaking.

Theories, Dilemmas, and Practices

The Secret History of Wonder Woman

The Politics of History in Putin’s Russia

This book considers if and how oral history is ‘best practice’ for education. International scholars, practitioners, and teachers consider conceptual approaches, methodological limitations, and pedagogical possibilities of oral history education. These experts ask if and how oral history enables students to democratize history; provides students with a lens for understanding nation-states’ development; and supports historical thinking skills in the classrooms. This book provides the first comprehensive assessment of oral history education – inclusive of oral tradition, digital storytelling, family histories, and testimony – within the context of 21st century schooling. By addressing the significance of oral history for education, this book seeks to expand education’s capacity for teaching and learning about the past.

A riveting work of historical detection revealing that the origin of Wonder Woman, one of the world’s most iconic superheroes, hides within it a fascinating family story—and a crucial history of twentieth-century feminism Harvard historian and New Yorker staff writer Jill Lepore has uncovered an astonishing trove of documents, including the never-before-seen private papers of William Moulton Marston, Wonder Woman’s creator. Beginning in his undergraduate years at Harvard, Marston was influenced by early suffragists and feminists, starting with Emmeline Pankhurst, who was banned from speaking on campus in 1911, when she was a freshman. In the 1920s, Marston and his wife, Sadie Elizabeth Holloway, brought into their home Olive Byrne, the niece of Margaret Sanger, one of the most influential feminists of the twentieth century. The Marston family story is a tale of drama, intrigue, and irony. In the 1930s, Marston and Byrne wrote a regular column for Family Circle celebrating conventional family life, even as they themselves pursued lives of extraordinary nonconformity. Marston, internationally known as an expert on truth—he invented the lie detector test—lived a life of secrets, only to spill them on the pages of Wonder Woman. The Secret History of Wonder Woman is a tour de force of intellectual and cultural history. Wonder Woman, Lepore argues, is the missing link in the history of the struggle for women’s rights—a chain of events that begins with the women’s suffrage campaigns of the early 1900s and ends with the troubled path of feminism a century later. This edition includes a new afterword with fresh revelations based on never before seen letters and photographs from the Marston family’s papers. With 161 illustrations and 16 pages in full color.

India’s nuclear program is often misunderstood as an inward-looking endeavor of secretive technocrats. In Ploughshares and Swords, Jayta Sarkar challenges this received wisdom, narrating a global story of India’s nuclear program during its first forty years. The book foregrounds the program’s civilian and military features by probing its close relationship with the space program. Through nuclear and space technologies, India’s leaders served the geopolitical aims of economic modernity and the geopolitical goals of deterring adversaries. The politically savvy, transnationally connected scientists and engineers who steered the program obtained technologies, materials, and information through a variety of state and nonstate actors from Europe and North America, including both superpowers. They thus maneuvered around Cold War politics and the choke points of the nonproliferation regime. Hyperdiversification increased choices for the leaders of the nuclear program but reduced democratic accountability at home. The nuclear program became a consensus-enforcing device in the name of the nation. Ploughshares and Swords is a provocative new history with global implications. It shows how geopolitical and technopolitical visions influence decisions about the nation after decolonization. Thanks to generous funding from the Swiss National Science Foundation, the ebook editions of this book are available as Open Access volumes from Cornell Open (cornellopen.org) and other repositories.

Literacy—it’s not just for English teachers anymore! The new Common Core English Language Arts Standards aren’t just for English teachers. Fluent reading and writing are critically important to the study of history/social studies, science, and technical subjects, too. Nutrition for the Older Adult

For 35,000 years ancient Afghanistan was called Aryana (the Light of God) has existed. Then in 747 AD what is today called Afghanistan became Khorasan (which means Sunrise in Dari) which was a much larger geographical area. In the middle of the nineteenth century the name Afghanistan, which means home of the united tribes, was applied originally by the Saxons (present day British) and the Russians. During the Great Games in the middle of nineteenth century, the Durand Line was created in 1893 and was in place until 1993. Saxons created the state of Afghanistan out of a geographical area roughly the size of Texas: in 1893 before which there were 10 million square kilometers, larger than the size of Canada, as means to act as a buffer zone between the Saxon-India & Tsarist-Russia and the Chinese.

Teaching Recent Global History explores innovative ways to teach world history, beginning with the early 20th century. The authors’ unique approach unites historians, social studies teachers, and educational curriculum specialists to offer historically rich, pedagogically innovative, and academically rigorous lessons that help students connect with and deeply understand key events and trends in recent global history. Highlighting the best scholarship for each major continent, the text explores the ways that this scholarship can be adapted by teachers in the classroom in order to engage and inspire students. Each of the eight main chapters highlights a particularly important event or theme, which is then complemented by a detailed discussion of a particular methodological approach. Key features include:
• An overarching narrative that helps readers address historical arguments;
• Relevant primary documents or artifacts, plus a discussion of a particular historical method well-suited to teaching about them;
• Lesson plans suitable for both middle and secondary level classrooms;
• Document-based questions and short bibliographies for further research on the topic. This invaluable book is ideal for any aspiring or current teacher who wants to think critically about how to teach world history and make historical discussions come alive for students.

The History and Future of the World Trade Organization is a comprehensive account of the economic, political and legal issues surrounding the creation of the WTO and its evolution. Fully illustrated with colour and black-and-white photos dating back to the early days of trade negotiations, the publication reviews the WTO’s achievements as well as the challenges faced by the organisation, and identifies the key questions that WTO members need to address in the future. The book describes the intellectual roots of the trading system, membership of the WTO and the growth of the Geneva trade community, trade negotiations and the development of coalitions among the membership, and the WTO’s relations with other international organisations and civil society. Also covered are the organisation’s robust dispute settlement rules, the launch and evolution of the Doha Round, the rise of regional trade agreements, and the leadership and management of the WTO.

The Philosophers and Mathematics

Neurosurgery is a rapidly developing and technically demanding branch of surgery that requires a detailed knowledge of the basic neuro-sciences and a thorough clinical approach. The Oxford Textbook of Neurological Surgery is an up-to-date, objective and readable text that covers the full scope of neurosurgical practice. It is part of the Oxford Textbooks in Surgery series, edited by Professor Sir Peter Morris. The book is split into 20 overarching sections (Principles of Neurosurgery, Neuro-oncology of Intrinsic Tumours; Extra-axial Tumours and Skull Lesions; Cerebro-Pontine Angle Tumours; Sellar and Supra-Sellar Tumours; Posterior Fossa Tumours; Pineal tumours; Uncommon Tumours and Tumour Syndromes; Neurotrauma and Intensive Care; Vascular Neurosurgery; Principles of Spinal Surgery; Spinal Pathology; Spinal Trauma; Peripheral Nerve Surgery; Functional Neurosurgery; Epilepsy; Paediatric Neurosurgery; Neurosurgery for Cerebrospinal Fluid Disorders and Neurosurgical Infection). Each section takes a dual approach with, ‘Generic Surgical Management’ chapters that focus on specific clinical problems facing the neurosurgeon (e.g. sellar/supra-sellar tumour, Intradural Spina Tumours etc.) and ‘Pathology-Specific’ chapters (e.g. Glioma, Meningeal Tumours, Scoliosis and Spinal Deformity, Aneurysm etc.). Where appropriate, this division provides the reader with easily accessible information for both clinical problems which present in a regional fashion and specific pathologies. The generic chapters cover aspects such as operative approaches, neuroanatomy and nuances. Specifically each chapter in the book incorporates several strands. Firstly the fundamental neuroscience (anatomy, pathology, genetics etc.) that underlies the clinical practice. Secondly, a review of the requisite clinical investigations (e.g. angiography, electrodiagnostics, radiology). Thirdly, a thorough evidence based review of clinical practice. Following this a consideration of the key debates and controversies in the field with ‘pro-’ and ‘con-’ sections (e.g. minimally invasive spine surgery, microsurgical treatment of aneurysms) is provided. A summary of the key papers and clinical scales relevant to neurosurgery form the concluding part. The book is a ‘one-stop’ text for trainees and consultants in neurosurgery, residents, those preparing for sub-specialty exams and other professionals allied to surgery who need to gain an understanding of the field. It acts as both a point of reference to provide a focussed refresher for the experienced neurosurgeon as well as a trusted training resource.

The Hidden History of Early Childhood Education provides an understandable and manageable exploration of the history of early childhood education in the United States. Covering historical, philosophical, and sociological underpinnings that reach from the 1800s to today, contributors explore groups and topics that have traditionally been marginalized or ignored in early childhood education literature. Chapters include topics such as home-schooling, early childhood education in Japanese-American internment camps, James “Jimmy” Hymes, the Eisenhower legacy, Constance Kamii, and African-American leaders of the field. This engaging book examines a range of new primary sources to be shared with the field for the first time, including personal narratives, interviews, and letters. The Hidden History of Early Childhood Education is a valuable resource for every early childhood education scholar, student, and practitioner.

Documents the 1972 story behind the longest-distance hijacking in U.S. history, tracing the events of the hijacking against a backdrop of civil unrest and the skyjacking wave of the early 1970s.

The Secret Rescue

Although television has developed into a major agent of the transnational and global flow of information and entertainment, television historiography and scholarship largely remains a national endeavour, partly due to the fact that television has been understood as a tool for the creation of national identity. But the breaking of the quasi-monopoly of public service broadcasters all over Europe in the 1980s has changed the television landscape, and cross-border television channels – with the help of satellite and the Internet – have catapulted the relatively closed television nations into the universe of globalized media channels. At least, this is the picture painted by the popular meta-narratives of European television history. Transnational Television History asks us to re-evaluate the function of television as a medium of nation-building in its formative years and to reassess the historical narrative that insists that European television only became transnational with the emergence of more commercial services and new technologies from the 1980s. It also questions some common assumptions in television historiography by offering some alternative perspectives on the complex processes of transnational circulation of television technology, professionals, programmes and aesthetics. This book was originally published as a special issue of Media History.

Complete with extracts from documents, interviews and songs, as well as essay and discussion topics, this book is suitable for both schools and universities. It can also be used as an introduction to South African history for the general reader.

A young boy had a desire to preach the Gospel, despite his daily challenges with hearing and speech. This is a story of Gary Manthorne’s willingness to rely on God to lead him day by day, and God’s willingness to bless those who give their lives to him. Gary was taunted and bullied as a child but with the help of supportive Christian parents, he graduated from High School and went on to Acadia University in Wolfville, N.S., Canada. This book will make you both cry and laugh as you follow Gary through his life. He had many struggles before he graduated from Acadia Divinity College and took up his ministry in the Valley, where many would say he has become the most beloved minister in the area. Gary has always reached outside the walls of the traditional church and some of the people, who have never gone to church, see him as their pastor and have great love and respect for him.

If our goal is Education for Knowing, as the title says, then we need to be guided by a conception of what knowing is. For example, we can all agree that there are “math facts” that students need to learn, and we can agree that there are general concepts and laws that students should be acquainted with. But is there more involved, perhaps something like nurturing in students a desire to probe deeper into the workings of thing? Or developing a capacity to explain why things work the way they do? Our conceptions of what genuine knowing is serve as guides to what we think the goal of education is, and they tell us how to “build a student.” However, as it turns out, there are multiple conceptions of what knowing truly involves, and these conceptions tend to be different for different sets of education stakeholders such as parents and their children, school administrators, and educational researchers. Understanding this diversity of conceptions of knowing will make it easier for representatives of the different stakeholder groups to work together to accomplish the goal of building knowing students.

Gardner examines the causes and consequences of Russia’s annexation of Crimea. By analyzing alliance formations and the consequences of other annexations in world history, the book urges an alternative US-NATO-European-Japanese strategy toward both Russia and China in the effort to prevent a renewed arms race, if not global war.

A mother who lost two children, one to suicide, another to a heart attack, describes how she found the strength to go on in the face of such unimaginable tragedy and offers hope and inspiration to others dealing with grief. Original.

This unique and monumental biography not only restores a central figure to history, it makes the crucial events he shaped accessible to a broader readership and gives contemporary readers a backdrop for understanding the fraught United StatesRussia relationship that still exists today.

Truly global in scope and with contributions from leading researchers around the world, The Handbook of Cannabis is the definitive resource on this fascinating drug. Combining scientific perspectives and clinical applications, it covers a vast array of topics, from why over the centuries cannabis has been used as a medicine, through the regulations facing those wishing to self-administer cannabis or provide cannabis-based medicines, to the chemical structure of its many constituents and the rapidly growing group of synthetic cannabinoids that are currently being used for ‘legal highs’. With each chapter written by a group of one or more internationally recognised subject experts, it provides academics and researchers with authoritative scientific material on the main pharmacological actions and their effects, as well as their pharmacokinetics, metabolism, and forensic detection. In addition it also examines the complex morphology, cultivation, harvesting, and processing of cannabis and the ways in which the plant’s chemical composition can be controlled. As well as offering a raft of scientific information there is extensive coverage of cannabinoid-based medicines. Helping readers to identify and evaluate their benefits, chapters explore pharmacological actions and the effects that seem to underlie approved therapeutic uses, how they are currently used to treat certain disorders, and the ever-growing number of wide-ranging potential clinical applications. There is also coverage of both the legal and illegal sources of cannabis, including ‘coffee shops’ and ‘cannabis dispensaries’. The complex issue of ‘recreational cannabis’ is also tackled. The sought-after and adverse psychological and non-psychological effects are described and discussions are included on how some adverse effects can be lessened by at least one constituent of cannabis, and that it might be possible to reduce the harm that cannabis does to some by changing current regulatory policies. The Handbook of Cannabis is a one-stop reference, essential reading for all clinicians, pharmacologists, psychologists, and psychiatrists interested in this drug, as well as those working in the field of public health.
