One of the largest and most complex human services systems in Western nations has evolved to address the needs of people with developmental disabilities. In the U.S., for example, school budgets are stretched thin by legally mandated special education, and billions of Medicaid dollars annually are consumed by residential and professional services to this population. The temptation of a quick fix is strong. Many parents desperately seek the latest ideas and place pressure on program administrators, who often are not trained to think critically about the evidence base for intervention efforts. The problems of people with developmental disabilities have historically been targeted by a wide range of professionals who rely on clinical experience and intuition and do not submit their claims to the tests of scientific research. Professional entrepreneurs have energetically promoted their treatments to a public perhaps too trustful of those with

credentials. Thus, families and their children are buffeted by reforms founded on belief and ideologically driven management. Services fluctuate with the currents of social movements and rapidly shifting philosophies of care as policymakers and providers strive for increased responsiveness and individualization. These forces affect not only where and how, but how well people are served. Too often, services are less effective than they could be, or worse, damaging to personal growth and quality of life. Many treatments are based on poorly understood or even disproven approaches. What approaches to early intervention, education, therapy, and remediation really help those with mental retardation and developmental disabilities improve their functioning and adaptation? And what approaches represent wastes of time, effort, and resources? This book brings together leading behavioral scientists and practitioners to focus light on the major controversies surrounding these questions. The authors review the origins, perpetuation, and resistance to scrutiny of questionable practices, and offer a clear rationale for appraising the quality of services. In an era of increasing accountability, no one with a professional stake in services to individuals with mental retardation and developmental disabilities can afford not to read this book. Mathematics for Elementary School Teachers, 3/e, offers pre-service teachers a comprehensive mathematics course designed to foster concept development through examples, investigations, and explorations. Visual icons throughout the main text allow instructors to easily connect the text to the hands-on activities in the corresponding Explorations Manual. Classroom Connections in both the exposition and the exercises guide students to connect the mathematics being taught with effective teaching strategies. Students must analyze educational mathematics research, evaluate common student errors, and see alternative solution methods, enabling them to better prepare for their future teaching careers. Investigations encourage students to think about a topic before discussing the math or viewing examples. These can be used as classroom discussion questions, for independent reading, or as review. Multiple Strategies presented throughout the examples and exposition of the text allow students to analyze numerous approaches to

From award-winning author Gregory J. Privitera and Lynn Ahlgrim-Delzell, Research Methods for Education covers the different quantitative and qualitative research methods specific to their use in educational research. This new text uses a problem-focused approach that fully integrates the decision tree—from choosing a research design to selecting an appropriate statistic for analysis. With a conversational, student-friendly writing style, and examples from a wide variety of education-related fields, the authors show how methods and statistics work together and enable the testing of hypotheses through use of the scientific method. Students will become informed consumers of research with the ability to understand a research article, judge its quality and apply the methods in action research to inform educational practice. Death and taxes come later; what seems inevitable for children is the idea that, after spending the day at school, they must then complete more academic assignments at home. The predictable results: stress and conflict, frustration and exhaustion.

Parents respond by reassuring themselves that at least the benefits outweigh the costs. But what if they don't? In *The Homework Myth*, nationally known educator and parenting expert Alfie Kohn systematically examines the usual defenses of homework--that it promotes higher achievement, "reinforces" learning, and teaches study skills and

responsibility. None of these assumptions, he shows, actually passes the test of research, logic, or experience. So why do we continue to administer this modern cod liver oil -- or even demand a larger dose? Kohn's incisive analysis reveals how a mistrust of children, a set of misconceptions about learning, and a misguided focus on competitiveness have all left our kids with less free time and our families with more conflict. Pointing to parents who have fought back -- and schools that have proved educational excellence is possible without homework -- Kohn shows how we can rethink what happens during and after school in order to rescue our families and our children's love of learning.

The present volume examines the relationship between second language practice and what is known about the process of second language acquisition, summarising the current state of second language acquisition theory, drawing general conclusions about its application to methods and materials and describing what characteristics effective materials should have. The author concludes that a solution to language teaching lies not so much in expensive equipment, exotic new methods, or sophisticated language analysis, but rather in the full utilisation of the most important resources - native speakers of the language - in real communication.

Organized around the unique theme of "What teachers need to know," Borich and Tombari present clearly organized units on Developmental Learning, Instruction and Classroom Management, Assessment, and Diverse Learners. Features include two new chapters on cognitive and constructivist strategies of teaching and learning, and over 40 "Applying your Knowledge" boxes.

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it.

Sometimes, even the child who is bullied begins to internalize this idea. For many

years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual

characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.

Decades of research have demonstrated that the parent-child dyad and the environment of the familyâ€™which includes all primary caregiversâ€™are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding

for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.
