cleanup process. It is easy to get petroleum into the ground, but hard to get it back out again. The problem does not exist in the groundwater or the soil alone, but in a dynamic balance between the soil, water, and air in the soil. Gasoline and any of its volatile components can and do move between the soil, air and water, and they cost billions of dollars every year in contamination cleanup. There is never only one way to clean up a particular site. The choice of the method of cleanup is one of the greatest factors affecting the cost. Another important cost factor is the level of cleanup required to satisfy the regulatory cleanup community. This new book will not only provide a fundamental understanding of site remediation techniques but also the knowledge to make cost-effective,
