The federal government's No Child Left Behind Act has thrust high-stakes testing - its goals, methods, and consequences - into the educational limelight. The four-fold purpose of this book is to: describe the nature of high-stakes testing; identify types of collateral damage that have attended the testing programs; analyze methods different groups of people have chosen for coping with the damage and suggest lessons to be learned from the high-stakes-testing experience. The six groups of people whose coping strategies are inspected include: politicians

and their staffs; educational administrators and their staffs; parents and the public; test makers and test administrators; teachers and students.

Importantly, the author avoids aligning himself with the test-bashing rhetoric of those who oppose high-stakes testing, especially the No Child Left Behind Act. Key features of this outstanding new book include: illustrative cases. The book offers more than 350 cases of collateral damage from high-stakes testing--and people's coping strategies--as reported in newspapers over the 2002-2004 period. background perspectives. Part I examines the influence of

that grading homework assignments would decrease the test performance and intrinsic motivation of students. A total of seventy high school juniors enrolled in regular and honors physics classes were studied. The experimental groups received subject matter-based comments as feedback on homework sets, with half of the groups also receiving numerical grades. The groups' performances were compared by analyzing scores on succeeding physics tests. Changes in the group's

motivations were compared by the use of questionnaires administered before and after the treatment. The questionnaire tapped interest and attributions of effort and success. While the study was inconclusive on the effects of grading on performance, it did yield an interesting result. The hypothesis concerning motivation was supported by the results of the questionnaires"

principles are mandated. Each lab concludes with either an essay or a detailed analysis of what happened and why it happened. This format is based on the expectations of joining a university program or becoming an industrial science professional. The ideal student lab report would be written in a lab research notebook, and then the essay or final analysis is done on a word processor to allow for repeat editing and corrections. The research notebook has all graph pages, a title section, and a

place for the students and their assistants to sign and witness that exercise. The basic mechanics of the lab report title, purpose, procedure, diagrams, data table, math and calculations, observations, and graphs are handwritten into the book. The conclusion is done on a word processor (MS Word), which allows the instructor to guide the student in writing and editing a complete essay using the MLA format. When the final copy is completed, the essay is printed and inserted into the lab notebook for grading.

At the end of the term, the student has all their labs in one place for future reference. These lab notebooks can be obtained for as little as \$ 3.00 per book. This is money well-spent. In our district, the Board of Education buys the books for each student. The BOE sees these books as expendable but necessary materials for all science and engineering instruction.
