This acclaimed clinical guide, now substantially revised and updated, has helped thousands of clinicians put the proven principles of harm reduction into practice with therapy clients who have substance use problems. Written by pioneers in the field, the book shows how to do effective therapeutic work with people still using alcohol or other drugs. It provides clear guidelines for conducting comprehensive assessments, making collaborative treatment decisions, and implementing interventions that combine motivational, cognitive-behavioral, and psychodynamic strategies. The focus is reducing drug-related harm while also addressing co-occurring psychological and emotional difficulties. Detailed clinical illustrations are featured throughout. New to This Edition
**Reflects over a decade of research advances and the tremendous growth of harm reduction clinical practice and training.

Hurt: Chronicles of the Drug War Generation weaves engaging first-person accounts of the lives of baby boomer drug users, including the author Miriam Boeri's own knowledge as the sister of a heroin addict. The compelling stories are set in historical context, from the cultural influence of sex, drugs, and rock n' roll to contemporary discourse that pegs drug addiction as a disease punished by incarceration. Boeri writes with penetrating insight and conscientious attention to the intersectionality of race, gender, and class as she analyzes the impact of an increasingly punitive War on Drugs on a hurting generation.

*This myth-busting anthology cuts through the propaganda to tell the true story of drug use, abuse, and the costly war on friends, families and communities. Author and regular High Times contributor Preston Peet assembles an all-star cast of writers to shine a harsh light on the misinformation peddled by prohibitionists who profit from the War on Some Drugs and Users. Despite the anti-drug hysteria, drugs have been an integral aspect of human life for thousands of years. They cure diseases, ease pain, enhance intelligence, calm nerves, open the doors of perception and alter consciousness. Yet, even with the easing of marijuana restrictions, the War on Some Drugs and Users continues to persecute huge swaths of the population. The reasons why can be found in *Under the Influence. The decades and trillions of dollars spent waging war on neighbors, friends and families have done nothing to eradicate drug use and abuse, but they have succeeded in overthrowing governments, tearing apart families and communities, and ensured the rise of international criminal cartels. Under the Influence explains how we came to this state of affairs and how we can bring about real reform. Contributors include Tom Robbins, Paul Krassner, Rick Doblin, Mike Gray, Lomny Shavelson, Daniel Forbes, Steve Wishnia, Cynthia Cotts, Russ Kick, Dr. Stanislav Grof, Daniel Pinchbeck, Paul Armentano, Jacob Sullum, Peter Dale Scott and Robert Anton Wilson.**

As pornography and prostitution increasingly saturate our lives and our communities, they become normalised and accepted as harmless entertainment for men and legitimate, even liberating forms of work for women. Bringing together research, testimony and theory by more than 30 writers and activists from different countries and generations, including a number of courageous industry survivors, 'Not for Sale' is a vital contribution to ongoing debates and a call to action and resistance.

"As is true with many addictions, overuse of video games steals our valuable and limited time and minds." - Christie Morse, MD (Pediatric Ophthalmologist) "Shocking insights into the minds of hardcore gamers." - Daniel Hunt (Former Competitive Gamer) About the Book The multi-billion dollar video game industry is in the business of creating fun and enticing games that can be addictive. As addicted gamers feast on digital indulgences, real life is neglected and their reality crumbles around them. Headlines related to video games "New Mexico mom gets 25 years for starving daughter." - Fox News "China used prisoners in lucrative Internet gaming work." - Guardian News "Online gamer killed for selling virtual weapon." - Sydney Morning Herald "South Korean dies after games sessions." - BBC News Hooked on Games is written by Brooke Strickland and Andrew Doan, MD, PhD, a physician with a research background in neuroscience, who battled his own addictions with video games. Dr. Doan was an addicted gamer, who at his peak, invested over 20,000 hours of playing games over a period of nine years. Dr. Doan's reckless compulsion to play games transformed him into a monster that almost destroyed his family, marriage, and career. He shares his expertise to educate others on the dangers of video game addiction and to provide hope for video game addicts and their families. Dr. Doan shares steps for gaming addicts to achieve recovery and steps for families and loved ones to intervene. Without attention to this quickest growing addiction, our society will suffer from the creation of Generation Vidiot, millions of people devoid of innovation and skills to live in the physical world.

Explores the world of homelessness and drug addiction in contemporary United States, discussing such themes as violence, race relations, sexuality, family trauma, social inequality, and power relations.

This comprehensive interdisciplinary synthesis focuses on the clinical and occupational intervention processes enabling workers to return to their jobs and sustain employment after injury or serious illness as well as ideas for improving the wide range of outcomes of entry and re-entry into the workplace. Information is accessible along key theoretical, research, and interventive lines, emphasizing a palette of evidence-informed approaches to return to work and stay at work planning and implementation, in the context of disability prevention. Condition-specific chapters detail best return to work and stay at work practices across diverse medical and psychological diagnoses, from musculoskeletal disorders to cancer, from TBI to PTSD. The resulting collection bridges the gap between research evidence and practice and gives readers necessary information from a range of critical perspectives. Among the featured topics: Understanding motivation to return to work: economy of gains and losses. Overcoming barriers to return to work: behavioral and cultural change. Program evaluation in return to work: an integrative framework. Working with stakeholders in return to work processes. Return to work after major limb loss. Improving work outcomes among cancer survivors. Return to work among women with fibromyalgia and chronic fatigue syndrome. The Handbook of Return to Work is an invaluable, unique and comprehensive resource for health, rehabilitation, clinical, counselling and industrial psychologists, rehabilitation specialists, occupational and physical therapists, family and primary care physicians, psychiatrists and physical medicine and rehabilitation as well as occupational medicine specialists, case and disability managers and human resource professionals. Academics and researchers across these fields will also find expert guidance and direction in these pages. It is an essential reading for all return to work and stay at work stakeholders.

Homelessness is one of the most compelling social problems in the United States. Dating from the early years in Colonial America to the current problems relating to homeless women and children, homelessness has been the topic of discussion for scholars, social activists, and policy makers. Many types of social problems are linked to homelessness, including poverty, substance abuse, foster care, and crime. As a result, unpacking the issues has proven to be a challenge for anyone interested in this topic. Homelessness in America offers an assessment of what is known about each segment of the homeless population, which contrary to conventional belief, is comprised of a wide variety of faces from many backgrounds. It explains linkages to other social issues and provides a balanced overview of homelessness in light of the varying perspectives on the topic. While much of what has been written about homelessness has come from the academic perspective, agendas often interfere with an accurate understanding of the problem. Clearly, there is a place for other types of perspectives, including those that view homelessness through political and legal lenses. These groups have provided us with a robust body of information within which we may better understand the questions relating to homelessness. McNamara has brought together the voices of these groups in order to reveal the numerous political, economic, and social constraints that beset current attempts to solve homelessness. In addition, the commonly held belief that homelessness is a result of laziness or a poor work ethic is turned on its head to reveal that homelessness is truly a multifaceted and complex issue.

"What we wish to offer you, then, is an updated professional resource that combines both clinical and scientific perspectives. We hope this book will be helpful to professionals who are already treating addictive disorders and also to those who are just learning how to treat addictions. We also encourage health professionals more generally to think of addictions as falling within their own normal scope of work, and we have kept this in mind in our writing. In addiction treatment, it makes a difference what you do and how you do it, and it is far easier to develop evidence-based practice from the outset than to change already established habits."--Page x.

Twelve-step programs that insist on abstinence are beneficial to many--but what about the millions of Americans who try to quit and fail, just want to cut down, or wish to work toward sobriety gradually? This groundbreaking book presents the Harm Reduction approach, a powerful alternative to traditional treatment that helps users set and meet their own goals for gaining control over drinking and drugs. The expert, empathic authors guide readers to figure out which aspects of their own habits may be harmful, what they would like to change, and how to put their intentions into action while also dealing with problems that stand in the way, such as depression, stress, and relationship conflicts. Based on solid science and 40+ years of combined clinical experience, the book is packed with self-discovery tools, fact sheets, and personal accounts. It puts the reader in the driver's seat with a new and empowering roadmap for change. Winner--American Journal of Nursing Book of the Year Award

ADDICTION TREATMENT covers the biological, psychological, and social aspects of alcoholism, eating disorders, compulsive gambling, and other addictions. As symbolized by the image on the book's cover, the authors bridge the gap between the popular twelve-step and harm-reduction approaches, thus illuminating how practitioners can guide clients down a trusted path that is tailored towards the client's particular needs. Through a number of first-person narratives about the experience of addiction, you will discover a realism and depth not commonly found in textbooks. In addition, the authors include topics such as the case against so-called underage drinking laws, that will draw you into the material and illustrate the importance of reducing harm within the biopsychological framework that ties the text together. America Anonymous is the unforgettable story of eight men and women from around the country -- including a grandmother, a college student, a bodybuilder, and a housewife -- struggling with addictions. For nearly three years, acclaimed journalist Benoit Denizet-Lewis immersed himself in their lives as they battled drug and alcohol abuse, overeating, and compulsive gambling and sexuality. Alternating with their stories is Denizet-Lewis's candid account of his own recovery from sexual addiction and his compelling examination of our culture of addiction, where we obsessively search for new and innovative ways to escape the reality of the present moment and make ourselves feel "better." Addiction is arguably this country's biggest public-health crisis, triggering and exacerbating many of our most pressing social problems (crime, poverty, skyrocketing health-care costs, and childhood abuse and neglect). But while cancer and AIDS survivors have taken to the streets -- and to the halls of Congress -- demanding to be counted, millions of addicts with successful long-term recovery talk only to each other in the confines of anonymous Twelve Step meetings. (A notable exception is the addicted celebrity, who often enters and exits rehab with great fanfare.) Through the riveting stories of Americans in various stages of recovery and relapse, Denizet-Lewis shines a spotlight on our most misunderstood health problem (is addiction a brain disease? A spiritual malady? A moral failing?) and breaks through the shame and denial that still shape our cultural understanding of it -- and hamper our ability to treat it. Are Americans more addicted than people in other countries, or does it just seem that way? Can food or sex be as addictive as alcohol and drugs? And will we ever be able to treat addiction with a pill? These are just a few of the questions Denizet-Lewis explores during his remarkable journey inside the lives of men and women struggling to become, or stay, sober. As the addicts in this book stumble, fall, and try again to make a different and better life, Denizet-Lewis records their struggles -- and his own -- with honesty and empathy.

From the President of the Research Society on Alcoholism The sixteenth volume of Recent Developments in Alcoholism contains the latest information on the field of alcoholism treatment research. This scholarly volume includes comprehensive reviews of the methodologies available to evaluate treatment outcome, state-of-the art psychosocial interventions, and recent advances in pharmacological adjuncts to treatment that are currently available and those on the brink of application. Other sections of the book address special issues in the treatment of alcohol dependence, including the treatment of the adolescents and other unique populations, the management of tobacco dependence, and the role of spirituality in recovery, among others. The clinician will find these reviews an important resource for learning about e- dence based treatments for alcoholism, and the researcher will find the synt- sis of recent developments informative and forward looking. The research agenda for the future rests soundly on the progress to date and additional advances in the treatment of alcoholism can be predicted in the near future. Stephanie O'Malley, Ph. D. President, Research Society on Alcoholism xi Preface From the President of the American Society of Addiction Medicine This excellent volume presents investigations covering a wide spectrum of scientific issues. It is also evident that many of these articles have clinical s- nificance, ranging from assessments of disorder, monitoring clinical progress, and behavioral and pharmacological interventions.

"This is the remarkable story of America's personal and instituional responses to alcoholism and other addictions. It is the story of mutual aid societies: the Washingtonians, the Blue Ribbon Reform Clubs, the Ollapod Club, the United Order of Ex-Boozers, the Jacoby Club, Alcoholics Anonymous and Women for Sobriety. It is a story of addiction treatment institutions from the inebriate asylums and Keeley Institutes to Hazelden and Parkside. It is the story of evolving treatment interventions that range from water cures and mandatory sterilization to aversion therapies and methadone maintenance. William White has provided a sweeping and engaging history of one of America's most enduring problems and the profession that was birthed to respond to it" -- BACK COVER.

This comprehensive volume offers a dynamic new approach to understanding and solving the drug problem. This text applies the techniques and formulations of general semantics to investigate and make recommendations about various aspects of drug abuse. General semantics, a process problem-solving approach based on the primacy of the scientific method and importance of language as a shaper of thoughts and perceptions, has a proven record of success in problem-solving across a wide variety of disciplines and fields.

Society tells us that sex is an act of self-expression, a personal choice for physical pleasure that can be summed up in the ubiquitous phrase: “hooking up”. Millions of American teenagers and young adults are finding that the psychological baggage of such behavior is having a real and lasting impact on their lives. They are discovering that “hooking up” is the easy part, but “unhooking” from the bonds of a sexual relationship can have serious consequences. A practical look into new scientific research showing how sexual activity causes the release of brain chemicals, which then result in emotional bonding and a powerful desire to repeat the activity. This book will help parents and singles understand that “safe sex” isn't safe at all; that even if they are protected against STDs and pregnancy, they are still hurting themselves and their partner.

• From the author of Salt Sugar Fat comes a “gripping” (The Wall Street Journal) exposé of how the processed food industry exploits our evolutionary instincts, the emotions we associate with food, and legal loopholes in their pursuit of profit over public health. “The processed food industry has managed to avoid being lumped in with Big Tobacco—which is why Michael Moss’s new book is so important.”—Charles Duhigg, author of The Power of Habit Everyone knows how hard it can be to maintain a healthy diet. But what if some of the decisions we make about what to eat are beyond our control? Is it possible that food is addictive, like drugs or alcohol? And to what extent does the food industry know, or care, about these vulnerabilities? In Hooked, Pulitzer Prize-winning investigative reporter Michael Moss sets out to answer these questions—and to find the true peril in our food. Moss uses the latest research on addiction to uncover what the scientific and medical communities—as well as food manufacturers—already know: that food, in some cases, is even more addictive than alcohol, cigarette, and drugs. Our bodies are hardwired for sweets, so food giants have developed fifty-six types of sugar to add to their products, creating in us the expectation that everything should be cloying; we’ve evolved to prefer fat, convenient meals, hence our modern-day preference for ready-to-eat foods. Moss goes on to show how the processed food industry—including major companies like Nestlé, Mars, and Kellogg’s—has tried not only to evade this troubling discovery about the addictiveness of food but to actually exploit it. For instance, in response to recent dieting trends, food manufacturers have simply turned junk food into junk diets, filling grocery stores with “diet” foods that are hardly distinguishable from the products that got us into trouble in the first place. As obesity rates continue to climb, manufacturers are now claiming to add ingredients that can effortlessly cure our compulsive eating habits. A gripping account of the legal battles, insidious marketing campaigns, and cutting-edge food science that have brought us to our current public health crisis, Hooked lays out all that the food industry is doing to exploit and deepen our addictions, and shows us why what we eat has never mattered more.

Database Aesthetics examines the database as cultural and aesthetic form, explaining how artists have participated in network culture by creating data art. The essays in this collection look at how an aesthetic emerges when artists use the vast amounts of available information as their medium. Here, the ways information is ordered and organized become artistic choices, and artists have an essential role in influencing and critiquing the digitization of daily life. This collection of ten true stories is based on interviews with people who, in their youth, lived with an addicted parent or sibling. The subjects speak honestly about what it was like to grow up with a family member addicted to alcohol, drugs, food, pills, or gambling. While describing how they managed to cope, interviewees explore the full range of situations and emotions they experienced—from denial, anger, and confusion to acceptance and forgiveness. Their maturity, sensitivity, and even their sense of humor will give teens going through similar situations the important realization that there are many ways to break free from the chains of others' addictions. The United Nations has called violence against women "the most pervasive, yet least recognized human rights abuse in the world" and there is a long-established history of the systematic victimization of women by the state during times of peace and conflict. This book contributes to the established literature on women, gender and crime and the growing research on state crime and extends the discussion of violence against women to include the role and extent of crime and violence perpetrated by the state. State Crime, Women and Gender examines state-perpetrated violence against women in all its various forms. Drawing on case studies from around the world, patterns of state-perpetrated violence are examined as it relates to women's victimization, their role as perpetrators, resisters of state violence, as well as their engagement as professionals in the international criminal justice system. From the direct involvement of Condaleeza Rice in the United States-led war on terror, to the women of Egypt's Arab Spring Uprising, to Afghani poetry as a means to resist state-sanctioned patriarchal control, case examples are used to highlight the pervasive and enduring problem of state-perpetrated violence against women. The exploration of topics that have not previously been addressed in the criminological literature, such as women as perpetrators of state violence and their role as willing consumers who reinforce and replicate the existing state-sanctioned patriarchal status quo, makes State Crime, Women and Gender a must-read for students and scholars engaged in the study of state crime, victimology and feminist criminology.

Richard Titmuss (1907-1973) was a pioneer in the field of social administration (now social policy). In this reissued classic, listed by the New York Times as one of the 10 most important books of the year when it was first published in 1950, he discusses the history of blood donation in the US and UK, contrasting the British system of reliance on voluntary donors to the American one in which the blood supply is in the hands of for-profit enterprises, concluding that a system based on altruism is both socially and economically efficient. Titmuss's argument about how altruism binds societies together has proved a powerful tool in the analysis of welfare provision. His analysis is even more topical now in an age of ever changing health care policy and health and welfare systems are under sustained attack from many quarters.

Susanna Reid, Good Morning Britain 'a fantastic book ... a remarkable read.' Richard Madeley, Good Morning Britain 'Brave, poignant and very moving. This book will change lives.' Jamie Redknapp 'A courageous, emotionally important book.' Jeff Stelling Paul Merson's wonderfully moving and brutally honest memoir of battling addiction for three decades. For twenty-one years Paul Merson played professional football. He won two First Division titles with Arsenal and was one of the finest players of his generation. But for thirty years Paul Merson has also been an addict. Alcohol, drugs, gambling: a desperately unenviable cocktail of addictions and depression which has plagued his entire adult life and driven him to the brink of suicide. 'I've come to realise that I'm powerless over alcohol ... I'm an alcoholic. My drinking and gambling have left a lot of wreckage.' Until recently the drinking and gambling were still raging. 'I wanted to kill myself. I couldn't go on any more. I see a way out.' Then something clicked. 'One day, I was walking home from the pub late on a Sunday evening, and I thought to myself: I've had enough of feeling like this, every day of my life. I rang up Alcoholics Anonymous the next day, and they haven't had a drink.' Hooked is Merson's wonderfully moving and brutally honest memoir of battling addiction, searingly charting his journey over three decades. It is absolutely unflinching in detailing his emotional and psychological troughs and the painful embers of an adult life blighted by such debilitating issues. Hooked will kick-start a crucial national conversation about addiction, depression and the damage they wreak. 'Addiction is the loneliest of places. You're a slave to it. It has to be you that wants things to change. Never be afraid to talk: the more you talk about the addictions the more it takes the power out of them. You're never alone.'

Drawing from the author's vast experience as teacher, researcher, and practitioner, Lawrence Shulman's DYNAMICS AND SKILLS OF GROUP COUNSELING equips students in the helping professions with a solid introduction to methods for effective group counseling. Guided by theory, empirical research, years of teaching experience, his own group practice, and the wisdom of colleagues, Shulman's text brings concepts to life with vivid cases that include Record of Service reports and dialogues with clients and groups. These illustrative examples connect theory to current practice and address the day-to-day realities of leading counseling groups. Extremely practical, the book presents students with a clear format on how to run a group built around a specific work: the preliminary (preparatory) phase; the beginning (contracting) phase; the middle (work) phase; and the ending and transition phase. Recognizing the broad applications of these methods, the latter part of the text shows how these methods can be applied to a wide range of settings. Reflecting the latest research and practices, DYNAMICS AND SKILLS OF GROUP COUNSELING delivers an insightful, authoritative, and comprehensive introduction to the field. In this interdisciplinary work, Kent Dunnington brings the neglected resources of philosophical and theological analysis to bear on the problem of addiction. Drawing on the insights of Aristotle and Thomas Aquinas, he formulates a compelling argument for the two dominant models of addiction--addiction as disease and addiction as choice.

Righteous Dopefiend
 Venturing into uncharted territory, mother and award-winning journalist Meredith Maran takes us inside teenagers' hearts, minds, and central nervous systems to explore the causes and consequences of our nation's drug crisis. In these pages we get to know the kids, the parents, the therapists, and the drug treatment programs at their best and worst. We're face-to-face with seventeen-year-old Mike, whose life revolves around selling, smoking, and snorting speed; fifteen-year-old Tristan -- the boy next door -- who can't get enough pot, pills, or vodka; and sixteen-year-old Zalika, a runaway, crack dealer, and prostitute since the age of twelve. Combining powerful on-the-street reporting and groundbreaking research, Dirty is essential reading for every parent and professional who works with or cares about children or teenagers.

One day a teenage boy gets on his bike and rides forty miles up California's Pacific Coast Highway to avoid causing an earthquake he fears will endanger his mother and sister. But the quake he is experiencing is not coming from beneath the earth; it's the onset of bipolar illness. Blinded by Hope describes what it's like to have an unusually bright, creative child—and then to have that child suddenly be hit with an illness that defies description and cure. Over the years, McGuire attributes her son's lost jobs, broken relationships, legal troubles, and periodic hospitalizations to the manic phase of his illness, denying the severity of his growing drug use—but ultimately, she has to face her own addiction to rescuing him, and to forge a path for herself toward acceptance, resilience, and love. A wakeup call about the epidemic of mental illness, substance abuse, and mass incarceration in our society, Blinded by Hope shines a light on the shadow of family dynamics that shame, ignorance, and stigma rarely let the public see, and asks the question: How does a mother cope when love is not enough?

"Irresistible is a fascinating and much needed exploration of one of the most troubling phenomena of modern times." —Malcolm Gladwell, author of New York Times bestsellers David and Goliath and Outliers "One of the most mesmerizing and important books I've read in quite some time. Alter brilliantly illuminates the new obsessions that are controlling our lives and offers the tools we need to rescue our businesses, our families, and our sanity." —Adam Grant, New York Times bestselling author of Originals and Give and Take Welcome to the age of behavioral addiction—an age in which half of the American population is addicted to at least one behavior. We obsess over our emails, Instagram likes, and Facebook feeds; we binge on TV episodes and YouTube videos; we work longer hours each year; and we spend an average of three hours each day using our smartphones. Half of us would rather suffer a broken bone than a broken phone, and Millennial kids spend so much time in front of screens that they struggle to interact with real, live humans. In this revolutionary book, Adam Alter, a professor of psychology and marketing at NYU, tracks the rise of behavioral addiction, and explains why so many of today's products are irresistible. Though these miraculous products melt the miles that separate people across the globe, their extraordinary and sometimes damaging magnetism is no accident. The companies that design these products tweak them over time until they become almost impossible to resist. By reverse engineering behavioral addiction, Alter explains how we can harness addictive products for the good—to improve how we communicate with each other, spend and save our money, and set boundaries between work and play—and how we can mitigate their most damaging effects on our well-being, and the health and happiness of our children. Adam Alter's previous book, Drunk Tank Pink: And Other Unexpected Forces that Shape How We Think, Feel, and Behave is available in paperback from Penguin.

In both developed nations and the developing world, there is a clear trend towards addressing alcohol, tobacco, and other drug problems through health and social services. There are several persuasive arguments for this shift beyond pure economics, which include comorbidity, cost effectiveness, coordination of care and effectiveness. This is the first volume to pull together effective methods that can be used for addressing substance abuse through health and social service systems. It also integrates interventions for a range of drugs of abuse, rather than focusing on only one (such as alcohol). The book's international perspective also makes this a unique contribution to the existing literature.
