The Emerging Role of Chaplaincy Records in Global Health Care

The second edition of *Social Work Documentation: A Guide to Strengthening Your Case Recording* is an update to Nancy L. Sidell's 2011 book on the importance of developing effective social work documentation skills. The new edition aims to help practitioners build writing skills in a variety of settings. New materials include updates on current practice issues such as electronic case recording and trauma-informed documentation. The book addresses the need for learning to keep effective documentation with new exercises and provides tips for assessing and documenting client cultural differences of relevance. Sidell encourages individuals to reflect on personal strengths and challenges related to documentation skills. *Social Work Documentation* is a how-to guide for social work students and practitioners interested in good record keeping in improving their documentation skills. -- from back cover.

This open access volume is the first academic book on the controversial issue of including spiritual care in integrated electronic medical records (EMR). Based on an international study group comprising researchers from Europe (The Netherlands, Belgium and Switzerland), the United States, Canada, and Australia, this edited collection provides an overview of different charting practices and experiences in various countries and healthcare contexts. Encompassing case studies and analyses of theological, ethical, legal, healthcare policy, and practical issues, the volume is a groundbreaking reference for future discussion, research, and strategic planning for inter- or multi-faith healthcare chaplains and other spiritual care providers involved in the new field of documenting spiritual care in EMR. Topics explored among the chapters include: *Spiritual Care Charting/Documenting/Recording/Assessment Charting Spiritual Care: Psychiatric and Psychotherapeutic Aspects Palliative Chaplain Spiritual Assessment Progress Notes Charting Spiritual Care: Ethical Perspectives Charting Spiritual Care in Digital Health: Analyses and Perspectives Charting Spiritual Care: The Emerging Role of Chaplaincy Records in Global Health Care* is an essential resource for researchers in interprofessional spiritual care and healthcare chaplaincy, healthcare chaplains and other spiritual caregivers (nurses, physicians, psychologists, etc.), practical theologians and health ethicists, and church and denominational representatives.

The Handbook of Social Work in Health and Aging is the first reference to combine the fields of health care, aging, and social work in a single, authoritative volume. These areas are too often treated as discrete entities, while the reality is that all social workers deal with issues in health and aging on a daily basis, regardless of practice specialization. As the baby boomers age, the impact on practice in health and aging will be dramatic, and social workers need more specialized knowledge about aging, health care, and the resources available to best serve older adults and their families. The volume's 102 original chapters and 13 overviews, written by the most experienced and prominent gerontological health care scholars in the United States and across the world, provide social work practitioners and educators with up-to-date knowledge of evidence-based practice guidelines for effectively assessing and treating older adults and their families; new models for intervention in both community-based practice and institutional care; and knowledge of significant policy and research issues in health and aging. A truly monumental resource, this handbook represents the best research on health and aging available to social workers today.

The Oxford Textbook of Palliative Social Work is a comprehensive, evidence-informed text that addresses the needs of professionals who provide interdisciplinary, culturally sensitive, biopsychosocial-spiritual care for patients and families living with life-threatening illness. Social workers from diverse settings will benefit from its international scope and wealth of patient and family narratives. Unique to this scholarly text is its emphasis on the collaborative nature inherent in palliative care. This definitive resource is edited by two leading palliative social work pioneers who bring together an array of international authors who provide clinicians, researchers, policy-makers, and academics with a broad range of content to enrich the guidelines recommended by the National Consensus Project for Quality Palliative Care.

Practitioners who work with clients at the end of their lives face difficult decisions concerning the client's self-determination, the kind of death he or she will have, and the prolongation of life. They must also remain sensitive

to the beliefs and needs of family members and the legal, ethical, and spiritual ramifications of the client's death. Featuring twenty-three decision cases based on interviews with professional social workers, this unique volume allows students to wrestle with the often incomplete and conflicting information, ethical issues, and time constraints of actual cases. Instead of offering easy solutions, this book provides detailed accounts that provoke stimulating debates among students, enabling them to confront their own responses, beliefs, and uncertainties to hone their critical thinking and decision making skills for professional practice. *Please note: Teaching Notes for this volume will be available from Electronic Hallway in Spring 2010. The importance of palliative care for children facing life threatening illness and their families is now widely acknowledged as an essential part of care, which should be available to all children and families, throughout the child's illness and at the end of life. The new edition of the Oxford Textbook of Palliative Care for Children brings together the most up to date information, current knowledge, evidence, and developments of clinical practice in the field. The book is structured into four sections. 'Foundations of Care' describes core issues, the foundations on which paediatric palliative care is based. 'Child and Family Care' looks at different aspects of psychological, social, and cultural care for the sick child or young person, and their family. These chapters cover the time course of the illness, around the time of death and support for the bereaved family. 'Symptom Care' focuses on the uses of medication, specific symptoms, and their management. Finally, 'Delivery of Care' examines practical approaches to care in different environments and the needs of clinicians. Two new editors join the team from Canada and South Africa, reflecting our aims to contribute towards the development of care for children across the world, and to be a resource for both experienced clinicians and those new to the field. Comprehensive in scope, exhaustive in detail, and definitive in authority, this third edition has been thoroughly updated to cover new practices, current epidemiological data, and the evolving models that support the delivery of palliative medicine to children. This includes two new chapters, looking in detail at 'Decision Making' and 'Perinatal Care', and a new section highlighting the emerging importance of 'Palliative Care for Children in Humanitarian Crises'. This book is an essential resource for anyone who works with children worldwide.

Many hospice social workers must address spiritual issues with their clients, but do not feel competent to do so effectively. This targeted volume draws upon multidisciplinary theory and research to advance a relational model of spiritually sensitive hospice care. The book will help readers elevate their spiritual competence and foster a relationship with their clients that will enrich the experience for all involved. Spirituality and Hospice Social Work helps practitioners understand various forms of spiritual assessment for use with their clients. The book teaches practitioners to recognize a client's spiritual needs and resources, as well as signs of spiritual suffering. It also discusses religious and spiritual practices that clients may use to enhance their spiritual coping.

Spirituality and Hospice Social Work stresses the need for interdisciplinary collaboration with other members of the hospice team, along with the value of maintaining professional ethical standards when addressing spiritual issues. Throughout, the importance of spiritual sensitivity and its effect upon client well-being is emphasized.

Service providers are increasingly called upon to serve clients at home, a setting even a seasoned professional can find difficult to negotiate. From monitoring the health of older populations to managing paroled offenders, preventing child abuse, and reunifying families, home-based services require models that ensure positive outcomes and address the ethical dilemmas that might arise in such sensitive contexts. The contributors to this volume are national experts in diverse fields of social work practice, policy, and research. Treating the home as an ecological setting that guides human development and family interaction, they present rationales for and overviews of evidence-based models across an array of populations and fields of practice. Part 1 provides historical background and contemporary applications for home-based services, highlighting ethical, administrative, and supervision issues and summarizing the social policies that shape service delivery. Part 2 addresses home-based practice in such fields as child and adult mental health, school social work, and hospice care, detailing the particular population being treated, the policy and agency context, theories and empirical data, and practice guidelines. Part 3, the editors present a unifying framework and suggest future directions for home-based social work.

Designed for easy use at the bedside, this manual contains the practical information health care professionals need to provide optimal end-of-life care. The Collaborative for Palliative Care ("Collaborative") is a grassroots consortium of public and private organizations that came together in 2005 for the purposes of studying the increasing need for palliative care and the methods for such care. It has grown from a small fledgling group to a membership of over 50 community-based organizations and volunteers dedicated to improving care of the seriously ill through education, research and advocacy. The Collaborative bridges policy, research and practice in its initiatives and vision for the future. Partners in Palliative Care examines specific areas of concern that the Collaborative has addressed in its education programs and advocacy, as well as the collaborative processes that have been so successful in building community assets. Areas of concentration have been diverse and include advance care planning, relational communication paradigms, community capacity building, the role of culture and spirituality in palliative care, the meaning of pain and suffering for seriously ill individuals, and the ethics of health care costs in palliative and end-of-life systems of care. This book was originally published as a special issue of the Journal of Social Work in End-of-Life and Palliative Care.

Palliative care is an essential element of our health care system and is becoming increasingly significant amidst an aging society and organizations struggling to provide both compassionate and cost-effective care. Palliative care is also characterized by a string interdisciplinary approach. Nurses are at the center of the palliative care team across settings and populations. The seventh volume in the HPNA Palliative Nursing Manuals series, Care of the Imminently Dying provides an overview of symptom management when a patient is reaching the end of their life. This volume covers delirium and the advantages of early diagnosis, determining the presence of dyspnea, death rattle, or cough, urgent syndromes that may appear the end of life, palliative sedation, and the withdrawal of life-sustaining therapies. The content of the concise, clinically focused volumes in the HPNA Palliative Nursing Manuals series is one resource for nurses preparing for specialty certification exams and provides a quick-reference in daily practice.

This volume outlines the belief that nursing homes can and should support the physical, psychological, and social needs of residents, and that residents can thrive in nursing homes when these needs are met. The book's contributors explore the role that palliative or comfort care plays in enhancing the quality of life of nursing home residents as well as the medical, familial, psychological, cultural, and financial issues that influence decision-making about end-of-life care. The book is designed to be a tool to prepare social workers to advocate for a greater incorporation of palliative care and psychosocial care into the culture of nursing home care. The book includes discussions of the psychosocial needs of nursing home residents and families, the financing of long-term care and end-of-life care, ethical issues in chronic care and end of life, trends and characteristics in nursing home care, rituals and grief at end-of-life, and considerations for the future. Each chapter includes case examples to further illustrate points made.

Living with Dying is the first textbook on end-of-life care for social workers and other healthcare practitioners who work with the terminally ill and their families. Organized around theoretical issues in loss, grief, and bereavement, and around clinical practice with individuals, families, and groups, the book addresses practice with people who have specific illnesses such as AIDS, bone marrow disease, and cancer, and pays special attention to patients that have been stigmatized by culture, ability, sexual orientation, age, and race, or homelessness.

"It is so important to advocate for things that may not always seem possible.
