When Lucene first hit the scene five years ago, it was nothing short of amazing. By using this open-source, highly scalable, super-fast search engine, developers could integrate search into applications quickly and efficiently. A lot has changed since then—search has grown from a "nice-to-have" feature into an indispensable part of most enterprise applications. Lucene now powers search in diverse companies including Akamai, Netflix, LinkedIn, Technorati, HotJobs, Epiphany, FedEx, Mayo Clinic, MIT, New Scientist Magazine, and many others. Some things remain the same, though. Lucene still delivers high-performance search features in a disarmingly easy-to-use API. Due to its vibrant and diverse open-source community of developers and users, Lucene is relentlessly improving, with evolutions to APIs, significant new features such as payloads, and a huge increase (as much as 8x) in indexing speed with Lucene 2.3. And with clear writing, reusable examples, and unmatched advice on best practices, Lucene in Action, Second Edition is still the definitive guide to developing with Lucene. Purchase of the print book comes with an offer of a free PDF, ePub, and Kindle eBook from Manning. Also available is all code from the book.

In this book, James Sickinger explores the use and preservation of public records in the ancient Athenian democracy of the archaic and classical periods. Athenian public records are most familiar from the survival of inscribed stelai, slabs of marble on

which were published decrees, treaties, financial accounts, and other state documents. Working largely from evidence supplied by such inscriptions, Sickinger demonstrates that their texts actually represented only a small part of Athenian record keeping. More numerous and more widely used, he says, were archival texts written on wooden tablets or papyri that were made, and often kept for extended periods of time, by Athenian officials. Beginning with the legislation of Dracon in the seventh century B.C., Sickinger traces the growing use of written records by the Athenian state over the next three centuries, concluding with an examination of the Metroon, the state archive of Athens, during the fourth century. Challenging assumptions about ancient Athenian literacy, democracy, and society, Sickinger argues that the practical use and preservation of laws, decrees, and other state documents were hallmarks of Athenian public life from the earliest times.

The World Wide Web constitutes the largest existing source of texts written in a great variety of languages. A feasible and sound way of exploiting this data for linguistic research is to compile a static corpus for a given language. There are several

advantages of this approach: (i) Working with such corpora obviates the problems encountered when using Internet search engines in quantitative linguistic research (such as non-transparent ranking algorithms). (ii) Creating a corpus from web data is virtually free. (iii) The size of corpora compiled from the WWW may exceed by several orders of magnitudes the size of language resources offered elsewhere. (iv) The data is locally available to the user, and it can be linguistically post-processed and queried with the tools preferred by her/him. This book addresses the main practical tasks in the creation of web corpora up to giga-token size. Among these tasks are the sampling process (i.e., web crawling) and the usual cleanups including boilerplate removal and removal of duplicated content. Linguistic processing and problems with linguistic processing coming from the different kinds of noise in web corpora are also covered. Finally, the authors show how web corpora can be evaluated and compared to other corpora (such as traditionally compiled corpora). The term "peer-to-peer" has come to be applied to networks that expect end users to

contribute their own files, computing time, or other resources to some shared project. Even more interesting than the systems' technical underpinnings are their socially disruptive potential: in various ways they return content, choice, and control to ordinary users. While this book is mostly about the technical promise of peer-to-peer, we also talk about its exciting social promise. Communities have been forming on the Internet for a long time, but they have been limited by the flat interactive qualities of email and Network newsgroups. People can exchange recommendations and ideas over these media, but have great difficulty commenting on each other's postings, structuring information, performing searches, or creating summaries. If tools provided ways to organize information intelligently, and if each person could serve up his or her own data and retrieve others' data, the possibilities for collaboration would take off. Peer-to-peer technologies along with metadata could enhance almost any group of people who share an interest--technical, cultural, political, medical, you name it. This book presents the goals that drive the developers of the best-known peer-to-peer systems, the problems they've faced, and the technical solutions they've found. A practice manual as well as an authoritative resource, *Destruction of Evidence* analyzes issues from the standpoints of civil litigation, criminal litigation, and the laws of professional responsibility. *Destruction of Evidence* also discusses in-depth such areas as: the spoliation inference the tort of spoliation discovery sanctions ethics, and routine destruction Also included is an expanded discussion of discovery sanctions, including procedural issues, choice-of-law considerations, the requirements for preserving sanctions issues for appellate review, burdens of proof, and appellate review. The supplement keeps you up to date on the continuing development of the controversial torts of both first- and third party spoliation of evidence: Massachusetts has declined to recognize a cause of action in tort for intentional or negligent spoliation of evidence The Supreme Court of Mississippi did not recognize an independent cause of action for the intentional spoliation of evidence against first or third party spoliators Nevada declined to recognize an independent tort spoliation of evidence when weighed against the "potentially endless litigation over a speculative loss, and by the cost to society of promoting onerous record and evidence retention policies"; Constitutional implications in the realm of criminal law. Many states within the last year have been addressing the potential for due process violations when evidence is destroyed and are continuing to adopt and expand the rules dictated by Brady,

Trombetta, and Youngblood. While each of these new jurisdictions refused to find due process violation, this trend recognizes the increased potential for constitutional violations when evidence is destroyed: Hawaii refused to find a constitutional violation where a police officer failed to save her completed police report, citing *Brady*. The Supreme Court of Mississippi ruled that a defendant was not denied due process by spoliation of crime scene evidence, citing *Trombetta*. Nevada, using a bad faith standard, ruled that an independent laboratory's failure to refrigerate a defendant's blood sample did not violate due process. A New Jersey court did not find a due process violation where the police had lost a videotape of the administration of breath tests for a DUI charge. Oklahoma ruled that a defendant's due process rights were not violated when the police destroyed latent crime scene fingerprints, citing *Youngblood*. Using an exculpatory evidence standard, the Supreme Court of South Dakota ruled that the State's release of a rape victim's vehicle without notice to the defendant did not violate the defendant's due process rights.
