Today, even the largest development organizations are turning to agile methodologies, seeking major productivity and quality improvements. However, large-scale agile development is difficult, and publicly available case studies have been scarce. Now, three agile pioneers at Hewlett-Packard present a candid, start-to-finish insider 's look at how they ' ve succeeded with agile in one of the company ' s most mission-critical software environments: firmware for HP LaserJet printers. This book tells the story of an extraordinary experiment and journey. Could agile principles be applied to re-architect an enormous legacy code base? Could agile enable both timely delivery and ongoing innovation? Could it really be applied to 400+ developers distributed across four states, three continents, and four business units? Could it go beyond delivering incremental gains, to meet the stretch goal of 10x developer productivity improvements? It could, and it did—but getting there was not easy. Writing for both managers and technologists, the authors candidly discuss both their successes and failures, presenting actionable lessons for other development organizations, as well as approaches that have proven themselves repeatedly in HP ' s challenging environment. They not only illuminate the potential benefits of agile in large-scale development, they also systematically show how these benefits can actually be achieved. Coverage includes: •Tightly linking agile methods and enterprise architecture with business objectives •Focusing agile practices on your worst development pain points to get the most bang for your buck •Abandoning classic agile methods that don ' t work at the largest scale •Employing agile methods to establish a new architecture •Using metrics as a " conversation starter " around agile process improvements •Leveraging continuous integration and quality systems to reduce costs, accelerate schedules, and automate the delivery pipeline •Taming the planning beast with " light-touch " agile planning and lightweight long-range forecasting •Implementing effective project management and ensuring accountability in large agile projects •Managing tradeoffs associated with key decisions about organizational structure •Overcoming U.S./India cultural differences that can complicate offshore development •Selecting tools to support quantum leaps in productivity in your organization •Using change management disciplines to support greater enterprise agility

Here is the book for anyone in the document chain. For Managers: Get the overview of the many print data streams found in your shop, from the high end to the desktop. Learn the resource terms and gain an understanding that will help you communicate effectively with the technicians. And, find out why documents don't always look the same, and why some are more of a problem than others! For Technicians: Learn the background behind the print data streams you work with every day and gain some insight into how to resolve problems in moving legacy data beyond its current print environment. There is even an appendix with vendor resources from around the world to help you solve your font, graphic, and transform problems.

An alphabetically arranged resource provides information on the business writing process, appropriate grammar, and correct style usage, in a volume that includes sample writings and new coverage of current technology. 10,000 first printing.

The networking of combat vehicle simulators in SIMNET is a method of collective training that supplements field exercises. This report offers guidance for using the PC-based Unit Performance Assessment System (UPAS) to collect and analyze data from SIMNET exercises. This report is an updated version of ARI Research Product 92-02 accomplished to reflect the addition of new features and utilities during the application of UPAS as a training research tool. Additions to the UPAS include: company-level versions of existing platoon- level displays; a new type of over space; a Fire Fight display; an After Action Review (AAR) Presentation Manager to capture, add comments to, and sequence data displays for an AAR or electronic Take Home Package; a mouse interface; the option to display an aggregate icon at platoon level; and the capability to display line-of-sight information.

The National Household Education Survey (NHES) is a random digit dial telephone survey of households developed by the National Center for Education Statistics. It has been conducted in 1991, 1993, 1995, and 1996, with varying components each year. The NHES 91/93/95/96 CD-ROM contains an electronic codebook (ECB) program that, after being installed on a personal computer, allows the user to examine the variables in each of the NHES data sets as well as create Statistical Analysis System (SAS) or Statistical Package for the Social Sciences (SPSS) programs to generate an extract data file for any of the NHES data files on the CD-ROM. The files include the 1991 and 1995 Adult Education files, the primary and preprimary education files from 1991, the school readiness and school safety files from 1993, the 1995 early childhood program participation file, and the 1996 household and library, parent and family involvement in education and civic involvement, youth civic involvement, and adult civic involvement files. The ECB is a DOS-based program for IBM-compatible personal computers. Sections describe its contents and use, focusing on what can be done with the ECB and how to do it. Emphasis is on extracting information from the files. Eight appendixes provide specific use information and samples, including SAS and SPSS samples. (SLD)
