This book offers readers a
comprehensive overview,
and an in-depth
understanding, of suitable

Bookmark File PDF Hydril Msp Annular Bop

methods for quantifying
and characterizing saline
aquifers for the
geological storage of CO₂.
It begins with a general
overview of the
methodology and the

Bookmark File PDF Hydril Msp Annular Bop

processes that take place when CO₂ is injected and stored in deep saline-water-containing formations. It subsequently presents mathematical and numerical

Bookmark File PDF Hydril Msp Annular Bop

models used for predicting the consequences of CO₂ injection. This book provides descriptions of relevant experimental methods, from laboratory experiments to field scale

Bookmark File PDF Hydril Msp Annular Bop

site characterization and techniques for monitoring spreading of the injected CO₂ within the formation. Experiences from a number of important field injection projects are

Bookmark File PDF Hydril Msp Annular Bop

reviewed, as are those from CO2 natural analog sites. Lastly, the book presents relevant risk management methods.

Geological storage of CO2 is widely considered to be

Bookmark File PDF Hydril Msp Annular Bop

a key technology capable of substantially reducing the amount of CO₂ released into the atmosphere, thereby reducing the negative impacts of such releases on the global

Bookmark File PDF Hydril Msp Annular Bop

climate. Around the world, projects are already in full swing, while others are now being initiated and executed to demonstrate the technology. Deep saline

Bookmark File PDF Hydril Msp Annular Bop

formations are the geological formations considered to hold the highest storage potential, due to their abundance worldwide. To date, however, these formations

Bookmark File PDF Hydril Msp Annular Bop

have been relatively poorly characterized, due to their low economic value. Accordingly, the processes involved in injecting and storing CO₂ in such formations still

Bookmark File PDF Hydril Msp Annular Bop

need to be better
quantified and methods for
characterizing, modeling
and monitoring this type
of CO₂ storage in such
formations must be rapidly
developed and refined.

Because these
