markets in a rapidly changing global economy. The result is a collection of insights that provide a framework for understanding globalization as an economic phenomenon. Since there exists a multi-level policy making system in the market economies, choices of decision makers at different levels should be considered explicitly in the formulation of sectoral plans and policies. To support the hypothesis, a theoretical energy planning approach is developed within the framework of the theory of economic policy planning, policy systems analysis and multi-level programming. The Parametric Programming Search Algorithm has been developed. On the basis of this theoretical model, an Australian Energy Policy System Optimisation Model

Winner of the 2019 Robert Picard Book Award The Handbook of Media Management and Economics has become a required reference for students, professors, policy makers and industry practitioners. The volume was developed around two primary objectives: assessing the state of knowledge for the key topics in the media management and economics fields; and establishing the research agenda in these areas, ultimately pushing the field in new directions. The Handbook's chapters are organized into parts addressing the theoretical components, key issues, analytical tools,

and future directions for research. With its unparalleled breadth of content from expert authors, the Handbook provides background knowledge of the various theoretical dimensions and historical paradigms, and establishes the direction for the next phases of research in this evolving arena of study. Updates include the rise of mobile and social media, globalization, audience fragmentation and big data.

This is a book for teachers, by teachers, from elementary school to university level classrooms. It is about the use of creative instructional strategies in K-12 classroom settings, and the transformations the teachers made in their journeys from being traditional practitioners to “becoming pedagogical” in their approaches to teaching and learning across the curriculum. Over twenty teachers conducted research in their classrooms on the

implementation of creative strategies, tactics, graphics organizers, and visual journals in teaching and learning. They have written their inquiries in a narrative style, informed by various forms of arts based educational research. Their research is approachable and usable by other teachers who are interested in becoming reflective-reflexive practitioners. Many of the strategies, tactics, and graphics organizers are described by Barrie Bennett in his widely used textbook, *Beyond Monet: The Artful Science of Instructional Intelligence*. However, through their journeys of becoming teacher-learner-researchers, many discovered numerous, creative variations of Bennett's work as it was implemented in their classrooms. While there are many professional books that provide ideas on collaborative learning and creative teaching approaches, there is very little published research on the efficacy of these concepts in

the K-12 classroom. These inquiries provide practical insights into how inspired teachers can conduct research on improving their own practice as well as on greatly improving their students' learning. Thus, this book has widespread interest for teachers and administrators who seek to implement systemic changes in the ways that teachers teach, and children learn, in the 21st century.

some time. The flow of migrants from poor to rich countries do not, however, constitute a typically European problem. V. S. public policy has also been facing a continued (legal and illegal) inflow of labor from different regions, notably Mexico and other Latin American countries. And similar developments in other advanced countries (Australia, Canada) as well as in selected fast-growing emerging markets in Eastern Europe and East Asia imply that these countries too are being compelled to adjust their public policies in order to relieve migratory pressures and deal with their consequences. The world economy already saw rising cross-border labor flows in the 1990s and most forecasts predict that South-North and South-South migration will remain at relatively high levels over the next decades and possibly even turn into a major global challenge for policy makers in the 21st century.
