This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.

The globalization of psychology is already in full effect in the United States as psychologists find themselves treating clients of varying nationalities and cultural backgrounds. The World Health Organization's International Classification of Diseases (ICD) has been a major factor in the creation of international standards for diagnosis and is already used in many medical practices throughout the country, yet it has not been fully integrated into the mental healthcare system. As such, this book provides psychologists with a brief yet thorough overview of the tenth edition of the ICD with clinical modifications for the US (ICD-10-CM) and will prepare them for its increased prevalence. Readers will come away with an understanding of the history and rationale behind this system of diagnosis, and they will learn how to integrate the coding system and its nuances into their everyday practices. They will also be prepared for upcoming revisions to the ICD-10-CM and the eventual transition to the ICD-11 that will change how psychologists do business.

These guidelines have been approved by the four organizations that make up the Cooperating Parties for the ICD-10-CM: the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), CMS, and NCHS. These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act (HIPAA). The diagnosis codes (Tabular List and Alphabetic Index) have been adopted under HIPAA for all healthcare settings.
