History of Computing: Learning from the Past Why is the history of computing important? Given that the computer, as we now know it, came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history. Isn't history about [old things]? Computing, of course, goes back much further than 70 years with many earlier - vices rightly being known as computers, and their history is, of course, important. It is only the history of electronic digital computers that is relatively recent. History is often justified by use of a quote from George Santayana who famously said that: [Those who cannot remember the past are condemned to repeat it]. It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future, but there is some circularity in this question, as the only way we will know the answer to this is to study our history. This book contains papers on a wide range of topics relating to the history of computing, written both by historians and also by those who were involved in creating this history. The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010.

Alice in Wonderland (also known as Alice's Adventures in Wonderland), from 1865, is the peculiar and imaginative tale of a girl who falls down a rabbit-hole into a bizarre world of eccentric and unusual creatures. Lewis Carroll's prominent example of the genre of "literary nonsense" has endured in popularity with its clever way of playing with logic and a narrative structure that has influence generations of fiction writing.

Academic Paper from the year 2019 in the subject Didactics - Common Didactics, Educational Objectives, Methods, grade: 3, , course: Psychology Department, language: English, abstract: The study assessed the effectiveness of multimedia instructional materials on students' academic performance. Between groups experimental design was used where three treatment groups were given a variety of multimedia enriched instructional materials; 54 students were exposed to audio visual materials, 53 used printed multicolour, and 54 printed plain as a control group. Pre and post tests were used to assess students' knowledge of the given set of materials before and after the experimental treatments. Post test result scores and multimedia enrichment were used as dependent and independent variables respectively. The audio visual group was found to perform significantly superior (56.76%) than the printed plain (p= 0.001); audio aided group performance was significantly higher (52.31%) than the printed plain (p=0.05); printed multicolour group performed higher (49.57%) than the printed plain group (45.54%). The study recommends the use of multimedia technology in the preparation and use of ODL instructional materials. The study further recommends studies on teachers' competence in developing, embedding and using multimedia enriched instructional materials.
