This abridged version of the bestselling reference Handbook of Stem Cells, Two-Volume Set attempts to incorporate all the essential subject matter of the original two-volume edition in a single volume. The material has been reworked in an accessible format suitable for students and general readers interested in following the latest advances in stem cells, including full color presentation throughout. Although some extra language and chapters have been deleted, rigorous effort has been made to retain from the original two-volume set the material pertinent to the understanding of this exciting area of biology. The organization of the book remains largely unchanged, combining the prerequisites for a general understanding of adult and embryonic stem cells; the tools, methods, and experimental protocols needed to study and characterize stem cells and progenitor populations; as well as a presentation by the world's experts of what is currently known about each specific organ system. * Full-color presentation throughout * Each chapter begins with 3-5 defined glossary terms, and all of the terms are collected in a comprehensive list within the book * References have been eliminated - now there are about 10 bibliographic entries per chapter

This is the first book developed specifically for the Final FFICM structured oral examination. It is written by two senior trainees who have recently passed the exam and is edited by a consultant intensivist with a special interest in education. The book is designed in the style of the SOE, and provides model answers which include summaries of the relevant evidence to guide trainees in their preparation for the exam. The 91 topics and questions therein are drawn from previous exam sittings, and are expanded further to ensure each topic is covered in detail. This text is a valuable revision aid to those studying for the Final FFICM, and will also prove useful to trainees revising for the Final FRCA, as it covers popular ICM topics that often come up in the anaesthetic fellowship exams.

This fourth volume in an exciting and detailed series on contact allergens and drug allergy provides monographs of all 507 systemic drugs which have caused delayed-type cutaneous drug hypersensitivity reactions and/or occupational allergic contact dermatitis. The monographs present: Identification section; Occupational allergic contact dermatitis; and Cutaneous adverse drug reactions from systemic drugs caused by type IV (delayed-type) hypersensitivity, as shown by positive patch tests (e.g. maculopapular eruption, acute generalized exanthematous pustulosis [AGEP], symmetrical drug-related intertriginous and flexural exanthema [SDRIFE], fixed drug eruption, drug reaction with eosinophilia and systemic symptoms [DRESS], and photosensitivity). Separate chapters present an overview of the spectrum of allergic cutaneous drug reactions, diagnostic tests, immediate contact reactions (contact urticaria), and systemic drugs that have acquired delayed-type hypersensitivity only by cross-reactivity. Key Features: Presents monographs of all known systemic drugs which have caused delayed allergic cutaneous drug reactions and/or occupational allergic contact dermatitis Provides an extensive literature review of relevant topics of allergenic systemic drugs, part of which is hard or impossible to find in database searches Identifies IUPAC names, synonyms, CAS and EC numbers, structural and chemical formulas, Merck Index monographs, and advises on patch testing Presents immediate contact reactions (contact urticaria) from systemics drugs and delayed-type hypersensitivity in drugs caused only by cross-reactivity Covers an extensive amount of information to benefit dermatologists, allergists, and all others interested in drug allergy

Where do program ideas come from? How are concepts developed into saleable productions? Who do you talk to about getting a show

produced? How do you schedule shows on the lineup? What do you do if a series is in trouble? The answers to these questions, and many more, can be found in this comprehensive, in-depth look at the roles and responsibilities of the electronic media programmer. Topics include: Network relationships with affiliates, the expanded market of syndication, sources of programming for stations and networks, research and its role in programming decisions, fundamental appeals to an audience and what qualities are tied to success, outside forces that influence programming, strategies for launching new programs or saving old ones. Includes real-life examples taken from the authors' experiences, and 250+ illustrations!

OSCEs for Intensive Care Medicine is a comprehensive revision resource for doctors preparing to take the Fellowship of the Faculty of Intensive Care Medicine (FFICM) and the European Diploma in Intensive Care Medicine (EDIC). Written by a team of practicing intensive care consultants with extensive experience running a successful FFCIM course, this book features over 100 practice questions organised into eight mock OSCE exams and is mapped to both the FFCIM and CoBaTrICE curricula. Reflecting the real exams, they are divided into stations on professionalism, data, resuscitation, and equipment, each of which are accompanied by further reading to ensure high-quality self-assessment. With hints and tips throughout to help candidates avoid common mistakes and misconceptions, this book is essential reading for any doctor preparing for the FFCIM or EDIC OSCE exams. Critical Care MCQs is the perfect companion for anyone sitting exams in intensive care, as a training resource or just wanting to improve their knowledge in this constantly developing area of medical practice. Written by critical care doctors with experience of UK and European examination formats, this book leads the reader through 450 true/false questions with referenced explanations, covering core syllabus topics and key influential papers to date. A detailed list of further resources and recommendations relevant to critical care revision is also provided to enable readers to further their knowledge and understanding. It is hoped that this book will prove invaluable for preparation and

success in upcoming intensive care exams for both candidates and trainers. This book would be useful for not only candidates sitting the UK Final Fellowship of Intensive Care Medicine (FFICM) and European Diploma of Intensive Care (EDIC) exams, but also the Indian Diploma in Critical Care Medicine (IDCCM), the Diploma of the Irish Board of Intensive Care Medicine (DIBICM), the Australia and New Zealand Fellowship of the College of Intensive Care Medicine (CICM), American Board and any other country-related intensive care exams.

Murlo and the Etruscans explores this and other mysteries in a collection of twenty essays by leading specialists of Etruscan and classical art, all of whom have been associated with the Murlo site. Numerous photographs and drawings accompany the essays. The first eleven chapters survey specific groups of Etruscan objects and challenge the view of Etruscan art as provincial or derivative. Interpretations of the magnificent series of decorated terra cotta frieze plaques and other architectural elements contribute to an understanding of Murlo and related Etruscan centers. Plaques depicting a lively Etruscan banquet offer a way to detect differences between Etruscan and ancient Greek society. The remaining nine chapters treat various aspects of Etruscan art, often moving beyond ancient Murlo, both geographically and temporally. They examine funerary symbolism, sculpted amber, and amber trade contacts along the ancient Adriatic Coast; depictions of domesticated cats; votive terra cottas of human anatomical parts and how they help in understanding Etruscan medicine; and the adaptation of Greek style, myth, and iconography in Etruscan art. "These essays will have a broad impact on the study of the ancient Mediterranean. They will certainly be required reading not only for Etruscologists but for anyone with an interest in the world of classical antiquity. The range of subjects, moving in wide arcs around the archaeological site at Murlo, brings the site into focus in a way that a series of standard archaeological site reports could not."--Kenneth Hamma, J. Paul Getty Museum "There is a fine and commendable interweaving and intertwining of thoughts and scholarly research throughout Murlo and the Etruscans. It will be a useful reference source for the art of Etruscan coroplast, wherein lies the forte of the Etruscan sculptor!"--Mario A. Del Chiaro, University of California

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

This is the first comprehensive International Handbook on the History of Mathematics Education, covering a wide spectrum of epochs and civilizations, countries and cultures. Until now, much of the research into the rich and varied history of mathematics education has remained inaccessible to the vast majority of scholars, not least because it has been written in the language, and for readers, of an individual country. And yet a historical overview, however brief, has become an indispensable element of nearly every dissertation and scholarly article. This handbook provides, for the first time, a comprehensive and systematic aid for researchers around the world in finding the information they need about historical developments in mathematics education, not only in their own countries, but globally as well. Although written primarily for mathematics educators, this handbook will also be of interest to researchers of the history of education in general, as well as specialists in cultural and even social history.

A 'non-election' in terms of popular perception, the 2004 European elections in the United Kingdom nevertheless provided a fascinating snapshot of the new, far more fluid electoral trends that have been emerging since the end of the Thatcher era, with Green, Eurosceptical, regional and single issue parties all jostling for electoral space with the bigger three. Like its predecessors, this book documents the background, framework and party preparations; recounts how the campaign unfolded; analyses the results and explores the consequences of the elections in both the British and the European context.

Few medical or scientific addresses have so unmistakably made history as the presentation delivered by Alois Alzheimer on November 4, 1906 in Tübingen. The celebratory event "Alzheimer 100 Years and Beyond" was organized through the Alzheimer community in Germany and worldwide, in collaboration with the Fondation Ipsen. This volume, a collection of articles by the invited speakers and of a few other prominent researchers, is published as a record of those events.

Only two years after its first run, the Inverted Classroom Conference has become a familiar event at Marburg University. Most conference participants not only knew about this digital teaching and learning scenario but were experienced users and developers. While during its predecessors most participants wanted to familiarize themselves with the central components of

the Inverted Classroom Model, the focus of the 3rd German Inverted Classroom Conference in 2014, to which this conference volume is dedicated, was not only a discussion of variants of the model but also, for the first time, the inclusion of long-term evaluations and aspects of student behavior. This shift of emphasis is reflected in the contributions to this volume. Even though all central aspects of the ICM - content production and delivery, testing, and the in-class phase - are still addressed, we can now find recommendations concerning digital material acquisition, in-class tuition, the role of student tutors as well as first long-term studies about ICM effects. In general then, the focus was much wider than that of the first two ICM-conferences: from a new and originally non-familiar teaching and learning scenario to more general aspects of digitization of teaching and learning in the 21st century.

About 550 registrants from 51 different countries attended the Seventh Ottawa Conference on Medical Education and Assessment in Maastricht. We received 525 abstracts for the conference, divided in thematic poster sessions and platform presentations. Organising the conference was an honour and we tried to meet the high standards of a friendly and relaxed atmosphere which has characterized previous Ottawa conferences. During and after the conference about 250 papers were submitted for publication in the conference proceedings, leaving us little time for a post-conference depression. Despite the large number of papers, the editors have attempted to review and edit the papers as care fully as possible. Occasionally, however, correspondence exceeded reasonable deadlines, preventing careful editing of a small number of the papers. Although we felt that our editorial task was not quite finished, we nevertheless decided to include these papers. We thank the many authors for their enthusiastic and prompt response to - occasionally tedious - editorial suggestions and requests. We are sure that this collective effort has resulted in a book that will make an important contribution to the field of medical education. The editors want to thank Jocelyn Flipppo-Berger whose expertise with desk top publishing and perseverance was a great help.

The objective structured clinical examination (OSCE) has become widely employed in intensive care medicine (ICM) exams such as the UK Final Fellowship of Intensive Care Medicine (FFICM), the European Diploma of Intensive Care (EDIC) exam, or the Australia and New Zealand Fellowship of the College of Intensive Care Medicine (CICM). This book is not only an essential tool for the rehearsal of OSCEs in preparation for these exams, but also for American and Indian exams, and any other exams within the field of intensive care medicine. The OSCE is a style of

examination that requires the candidate to present specific information in a short space of time matched to a prescriptive mark scheme. This book allows candidates preparing for an ICM OSCE to format their knowledge for this type of examination whilst practising and rehearsing against time. The 60 OSCE stations provide a broad array of topics from past exams ranging across the training ICM curriculums. The mark schemes are presented in a short, punctuated form allowing the candidate access to important points, ideal at the sharp end of an exam campaign. The 5 sets of OSCE exams are designed to run as a set of 12. Each set will have an array of clinical scenarios requiring swift assessment, diagnosis, recommendations for investigations and management, whilst also exploring aspects of pathophysiology. There are a number of data-interpretation tools that are incorporated into clinical scenarios as well as standalone stations for electrocardiogram and radiology analysis. This book is an important preparatory tool crucial to the armamentarium of any candidate preparing for an ICM exam.

Part of the highly respected Requisites series, *Radiology Noninterpretive Skills*, by Drs. Hani H. Abujudeh and Michael A. Bruno, is a single-volume source of timely information on all of the non-imaging aspects of radiology such as quality and safety, ethics and professionalism, and error management in radiology. Residents and radiologists preparing for the boards and recertification will find this book invaluable, as well as those practitioners wanting to broaden their knowledge and skills in this increasingly important area. Offers a readable and concise introduction to the essential noninterpretive skills as defined by the IOM, ACR, and other national organizations. Covers what you need to know about quality and safety; leadership and management; health economics; legal, business, ethics and professionalism; statistical tools; error reporting and prevention; evidence-based imaging; health IT and internet applications; "Image Wisely" and "Imaging 3.0" ACR initiatives; legal issues and malpractice; current and future payment models in radiology; and much more. Summarizes key information with numerous outlines, tables, 'pearls,' and boxed material for easy reference. Provides comprehensive coverage of key "milestones" in training identified by the Accreditation Council for Graduate Medical Education (ACGME). Fills an important gap for those preparing for the current MOC and ABR exams, covering the many topics touched upon in a major section of the examinations. Brings together in one source the experience of leading national experts and a select team of expert contributors.

The skin is one of the most frequently involved organs in adverse drug reactions. Occurring with an incidence of 1-5% for certain types of drugs, cutaneous drug eruptions are mostly benign in nature, and comprise the maculopapular type of eruption and urticaria. However, about one third of them require hospital treatment, leading to a considerable burden for the health care system. In this book, a selected group of experts provide an up-to-date, condensed and clinically relevant overview of the field of cutaneous drug eruptions, ranging from epidemiology and genetic predisposition to available therapeutic measures, including rapid drug desensitization. Reflecting the great progress made in recent years in this field, this publication will be a useful tool for a better understanding, diagnosis and management of cutaneous drug eruptions, not only for general physicians, dermatologists and clinical allergologists, but also for nurses and scientists.

This book provides in-depth insights into the most recent developments in different areas of microbial methane and methanol utilization, including novel fundamental discoveries in genomics and physiology, innovative strategies for metabolic engineering and new synthetic approaches for generation of feedstocks, chemicals and fuels from methane, and finally economics and the implementation of industrial biocatalysis using methane consuming bacteria. Methane, as natural gas or biogas, penetrates every area of human activity, from households to large industries and is often promoted as the cleanest fuel. However, one should not forget that this bundle of energy, carbon, and hydrogen comes with an exceptionally large environmental footprint. To meet goals of long-term sustainability and human well-being, all areas of energy, chemicals, agriculture, waste-management industries must go beyond short-term economic considerations and target both large and small methane emissions. The search for new environment-friendly approaches for methane capture and valorization is an ongoing journey. While it is not yet apparent which innovation might represent the best solution, it is evident that methane biocatalysis is one of the most promising paths. Microbes are gatekeepers of fugitive methane in Nature. Methane-consuming microbes are typically small in number but exceptionally big in their impact on the natural carbon cycle. They control and often completely eliminate methane emission from a variety of biological and geothermal sources. The tremendous potential of these microbial systems, is only now being implemented in human-made systems. The book addresses professors, researchers and graduate students from both academia and industry working in microbial biotechnology, molecular biology and chemical engineering.

In this volume experts answer questions which are frequently asked about the properties and handling of X-ray contrast media, providing a good source of reference in the use of these agents and which should help to reduce the rate of adverse effects. In addition, basic information is provided on the development, toxicology, pharmacology, pharmacokinetics and clinical testing of X-ray contrast media. Finally, a look at the prospects for contrast media in magnetic resonance imaging and ultrasound underlines the increasing importance of these diagnostic imaging procedures. This book will be of interest to physicians and their staff alike.

This book provides useful pointers to help journalists navigate the dilemmas they face in the professional practice. It provides an enlightening overview of the views of Mauritian journalists on their own industry and an in-depth look at the South African model for self-regulation. As part of the ethical approach, the book also reviews the main issues related to gender-sensitive reporting, in view of the significant role the media have to play in gender education. In an age of information overload, over-exposure to a hyper-mediated culture and the rise of user-generated content, journalists increasingly strive to remain relevant. The

temptation to use lower standards, resort to sensationalism and even paycheck journalism is strong. Such examples of unethical practice can only further undermine the credibility of a profession which purports to act as a watchdog, a Fourth Estate. Claims that ethics is a private affair no longer hold good. Journalism is a public good and the need to a clear social contract is stronger than ever in a world where transparency and accountability are on the agenda. Mechanisms for ensuring ethical practice are essential and should be hailed as beacons for a stronger journalism.

These proceedings represent the work of researchers participating in the 10th International Conference on e-Learning (ICEL 2015) which is being hosted this year by the College of the Bahamas, Nassau on the 25-26 June 2015. ICEL is a recognised event on the International research conferences calendar and provides a valuable platform for individuals to present their research findings, display their work in progress and discuss conceptual advances in the area of e-Learning. It provides an important opportunity for researchers and managers to come together with peers to share their experiences of using the varied and expanding range of e-Learning available to them. With an initial submission of 91 abstracts, after the double blind, peer review process there are 41 academic Research papers and 2 PhD papers Research papers published in these Conference Proceedings. These papers come from some many different countries including: Australia, Belgium, Brazil, Canada, China, Germany, Greece, Hong Kong, Malaysia, Portugal, Republic of Macedonia, Romania, Slovakia, South Africa, Sweden, United Arab Emirates, UK and the USA. A selection of the best papers - those agreed by a panel of reviewers and the editor will be published in a conference edition of EJEL (the Electronic Journal of e-Learning www.ejel.com). These will be chosen for their quality of writing and relevance to the Journal 's objective of publishing papers that offer new insights or practical help into the application e-Learning.

Over the last few years, IBM® IMSTM and IMS tools have been modernizing the interfaces to IMS and the IMS tools to bring them more in line with the current interface designs. As the mainframe software products are becoming more integrated with the Windows and mobile environments, a common approach to interfaces is becoming more relevant. The traditional 3270 interface with ISPF as the main interface is no longer the only way to do some of these processes. There is also a need to provide more of a common looking interface so the tools do not have a product-specific interface. This allows more cross product integration. Eclipse and web-based interfaces being used in a development environment, tooling using those environments provides productivity improvements in that the interfaces are common and familiar. IMS and IMS tools developers are making use of those environments to provide tooling that will perform some of the standard DBA functions. This book will take some selected processes and show how this new tooling can be used. This will provide some productivity improvements and also provide a more familiar environment for new generations DBAs. Some of the functions normally done by DBA or console operators can now be

done in this eclipse-based environment by the application developers. This means that the need to request these services from others can be eliminated. This IBM Redbooks® publication examines specific IMS DBA processes and highlights the new IMS and IMS tools features, which show an alternative way to accomplish those processes. Each chapter highlights a different area of the DBA processes like: PSB creation Starting/stopping a database in an IMS system Recovering a database Cloning a set of databases

Learn how to deliver news in any and all media. This one volume teaches you how to master all of the skills needed to be a converged journalist. Don't think only broadcast or print. Think online, air waves, magazines, PDAs, cell phones and electronic paper. Convergent Journalism an Introduction explains what makes a news story effective today and how to recognize the best medium for a particular story. That medium may be the web, broadcast, radio, or a newspaper or magazine - or, more likely, all of the above. This text will explain how a single story can fulfil its potential through any media channel. Convergent Journalism an Introduction shows you, the news writer, editor, reporter, and producer how to tailor a story to meet the needs of various media, so your local news story can be written in a form appropriate for the web, print, PDA screen and broadcast.

"Amidst the glut of studies on new media and the news, the enduring medium of television finally gets the attention it deserves. Cushion brings

television news back into perfect focus in a book that offers historical depth, geographical breadth, empirical analysis and above all, political significance. Through an interrogation of the dynamics of and relations between regulation, ownership, the working practices of journalism and the news audience, Cushion makes a clear case for why and how television news should be firmly positioned in the public interest. It should be required reading for anyone concerned with news and journalism." - Natalie Fenton, Goldsmiths, University of London "An admirably ambitious synthesis of journalism scholarship and journalism practice, providing a comprehensive resource of historical analysis, contemporary trends and key data." - Stewart Purvis, City University and former CEO of ITN Despite the democratic promise of new media, television journalism remains the most viewed, valued and trusted source of information in many countries around the world. Comparing patterns of ownership, policy and regulation, this book explores how different environments have historically shaped contemporary trends in television journalism internationally. Informed by original research, Television Journalism lays bare the implications of market forces, public service interventions and regulatory shifts in television journalism's changing production practices, news values and audience expectations. Accessibly written and packed with topical references, this authoritative account offers fresh insights into the past, present and future of journalism, making it a necessary point of reference for upper-level undergraduates, researchers and academics in broadcasting, journalism, mass communication and media studies.

Clinical sono-encephalography, although a relatively new technique, is rapidly gaining acceptance in hospital and specialist practice. No problem was involved in its introduction, as the method is self-evidently suitable for the diagnosis of acute and chronic intracranial lesions. As an auxiliary examination it is, within its limitations, almost ideal: it requires no large investment in apparatus, it is rapidly done, the patient suffers no discomfort, and there is no risk of complications. In the hands of an experienced examiner, who has a solid grounding in neurological theory and practice to enable him to interpret his findings, it yields important and reliable information. The use of this method in children requires special knowledge, covering the age of the child, the technique of examination, the range of normality and the interpretation of the pathological findings from the neuropediatric point of view. These special features of pediatric sono-encephalography are seldom discussed in the literature, wide as it is. This monograph is designed to bridge the gap. The book is based on the author's extensive experience acquired over a number of years in the neuropediatric department of the University Children's Hospital Heidelberg. Wisely used, pediatric sono-encephalography should provide a useful tool, not only for experts in highly specialized hospital departments, but also for pediatricians, neuropediatricians, child psychiatrists, neurologists and neurosurgeons engaged in more routine clinical work. In recent years, the advancing science and increasing availability of assisted reproduction have given new hope to infertile couples. However, the use of IVF and ART has also led to marked increases in the number of multiple-infant live births. This poses a public health concern, as these neonates have a higher rate of pre-term delivery, compromising their survival chances and increasing their risk of lifelong disability. By optimizing the selection of gametes and embryos with high probabilities of implantation, it is possible to reduce the number of embryos transferred and, by extension, the number of high-risk multiple gestations, while maintaining or increasing pregnancy rates. *Human Gametes and Preimplantation Embryos: Assessment and Diagnosis* provides a broad yet concise overview of established and developing methodologies for assessment of gamete and embryo viability in assisted reproduction. This book elucidates the best practices for precisely selecting viable specimens based on morphology and cleavage rate and covers the spectrum of emerging adjunctive technologies for predicting reproductive potential. The authors present their extensive knowledge of “omics” approaches (genomics, transcriptomics, proteomics, and metabolomics), with unbiased delineation of the associated advantages and potential pitfalls. This valuable clinical resource is well suited to infertility specialists, Ob/Gyn physicians, IVF laboratory technicians, and researchers in the fields of embryology and reproductive medicine.
