*Within the past 10 years, tremendous innovations have been brought forth in information diffusion and management. Such technologies as social media have transformed the way that information is disseminated and used, making it critical to understand its distribution through these mediums. With the consistent creation and wide availability of information, it has become imperative to remain updated on the latest trends and applications in this field. Information Diffusion Management and Knowledge Sharing: Breakthroughs in Research and Practice examines the trends, models, challenges, issues, and strategies of information diffusion and management from a global context. Highlighting a range of topics such as influence maximization, information spread control, and social influence, this publication is an ideal reference source for managers, librarians, information systems specialists, professionals, researchers, and administrators seeking current research on the theories and applications of global information management.*

*Presenting the history of relations between the European Union and Japan, this book explains the origins and significance of the momentous 2018 Economic Partnership Agreement and its parallel Strategic Partnership Agreement. Set within the historical context of the 1991 Hague Declaration and Action Plan of 2001, this book analyses the impact of recent background changes to the liberal trading order, the proliferation of free trade agreements, and uncertainty about role of the United States in the world on relations between Japan and the EU. Adopting a path-dependent approach, it illustrates how these agreements were reached as a result of growing patterns of cooperative behaviour between the EU and Japan, and the imprint of shared past experiences in areas from trade to security. In so doing, this book also raises important questions about the future of multilateral cooperation, exploring the potential for bilateral agreements to undermine the possibility of finding international solutions to increasingly international problems. EU–Japan Relations and the Crisis of Multilateralism will appeal to students and scholars of European and Japanese politics and international relations, as well as policymakers internationally with an interest in these significant agreements.*

Measuring the Digital Economy A New Perspective

Trade has always been shaped by technological innovation. In recent times, a new technology, Blockchain, has been greeted by many as the next big game-changer. Can Blockchain revolutionize international trade? This publication seeks to demystify the Blockchain phenomenon by providing a basic explanation of the technology. It analyses the relevance of this technology for international trade by reviewing how it is currently used or can be used in the various areas covered by WTO rules. In doing so, it provides an insight into the extent to which this technology could affect cross-border trade in goods and services, and intellectual property rights. It discusses the potential of Blockchain for reducing trade costs and enhancing supply chain transparency as well as the opportunities it provides for small-scale producers and companies. Finally, it reviews various challenges that must be addressed before the technology can be used on a wide scale and have a significant impact on international trade.

In this weaving of radical political economy, Omnia Sunt Communia sets out the steps to postcapitalism. By conceptualising the commons not just as common goods but as a set of social systems, Massimo De Angelis shows their pervasive presence in everyday life, mapping out a strategy for total social transformation. From the micro to the macro, De Angelis unveils the commons as fields of power relations - shared space, objects, subjects - that explode the limits of daily life under capitalism. He exposes attempts to co-opt the commons, through the use of code words such as 'participation' and 'governance', and reveals the potential for radical transformation rooted in the reproduction of our communities, of life, of work and of society as a whole.
