In this special edited volume, the editors and invited English Medium Instruction (EMI) researchers, from different parts of the world, outline the latest EMI research methods. Providing academic instruction using English is rapidly spreading in many countries where English is a second or foreign language, and there is a growing interest in researching the effectiveness and effects of EMI across different educational levels. This volume includes chapters on everything from research into classroom interaction to teachers' and students' perceptions and motivations to language challenges and strategies and the

pedagogical implications of translanguaging in EMI classrooms. These specific topics were chosen to reflect different approaches to researching EMI. Each chapter focuses on a specific type of research methodology. It begins with an overview of the literature of the topic under discussion. Then an example study is provided to illustrate how this methodology can be used to investigate EMI. Each chapter identifies the process that the EMI researcher used to conduct their research and discusses key dilemmas they faced, focusing particularly on the methodological issues they encountered. By exploring these issues, this volume hopes to inform theory (or the lack thereof) underlying research into the phenomenon of EMI. This volume is indispensable for EMI tutors, curriculum developers, policymakers, and teachers, as well as students at both

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the

Download Free Igcse Nov 2013 Biology Questions Paper 6

typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the

GCSE Biology. Per Le Scuole Superiori

This book discusses the scope of science education research and practice in Asia. It is divided into five sections: the first consists of nine chapters providing overviews of science education in Asia (China, Lebanon, Macau, Malaysia, Mongolia, Oman, Singapore, Taiwan, and Thailand). The second section offers chapters on content analysis of

research articles, while the third includes three chapters on assessment and curriculum. The fourth section includes four chapters on innovative technology in science education; and the fifth section consists of four chapters on professional development, and informal learning. Each section also has additional chapters providing specific comments on the content. This collection of works provides readers with a starting point to better understand the current state of science education in Asia.

The mission of the International Journal of Educational Reform (IJER) is to keep readers

up-to-date with worldwide developments in education reform by providing scholarly information and practical analysis from recognized international authorities. As the only peer-reviewed scholarly publication that combines authors' voices without regard for the political affiliations perspectives, or research methodologies, IJER provides readers with a balanced view of all sides of the political and educational mainstream. To this end, IJER includes, but is not limited to, inquiry based and opinion pieces on developments in such areas as policy, administration, curriculum, instruction, law,

and research. IJER should thus be of interest to professional educators with decision-making roles and policymakers at all levels turn since it provides a broad-based conversation between and among policymakers, practitioners, and academicians about reform goals, objectives, and methods for success throughout the world. Readers can call on IJER to learn from an international group of reform implementers by discovering what they can do that has actually worked. IJER can also help readers to understand the pitfalls of current reforms in order to avoid making similar mistakes. Finally, it is the mission

Everything You Wanted to Know about the Science of Raising

(Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his

kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are

The field of multilingual testing and

assessment has grown rapidly in recent years due to the widespread need to integrate immigrant populations into mainstream education and to provide fair and equitable forms of assessment for all students. However, a continuing emphasis on bilingual students has created a significant gap in testing and assessment research. This book addresses the need for research and guidance on testing multilingual students: at its heart is the difference between designing multilingual tests and testing multilingual individuals.
