Complex Dynamics

Artists, scientists and the wider public of the Victorian era all seem to have shared a common interest in the myth of the Briar Rose and its contemporary implications, from the Pre-Raphaelites and late Victorian aesthetes to the fascinated crowds who visited Ellen Sadler, the real-life 'Sleeping Maid' who is reported to have slept from 1871 to 1880.
 The figure of the beautiful reclining female sleeper is a recurring theme in the Victorian imagination, invoking visual, literary and erotic connotations that contribute to a complex range of readings involving aesthetics, gender definitions and contemporary medical opinion. This book compiles and examines a corpus of Sleeping Beauties drawn from Victorian medical reports, literature and the arts and explores the significance of the enduring revival of the myth.

Le Point

In 1922, at the age of two, Petey’s distraught parents commit him to the state’s insane asylum, unaware that their son is actually suffering from severe cerebral palsy. Bound by his wheelchair and struggling to communicate with the people around him, Petey finds a way to remain kind and generous despite the horrific conditions in his new “home.” Through the decades, he befriends several caretakers but is heartbroken when each eventually leaves him. Determined not to be hurt again, he vows to no longer let hope of lifelong friends and family torment him. That changes after he is moved into a nursing home and meets a young teen named Trevor Ladd; he sees something in the boy and decides to risk friendship one last time. Trevor, new to town and a bit of a loner, is at first weary of the old man in the wheelchair. But after hearing more of his story, Trevor learns that there is much more to Petey than meets the eye. Petey is a touching story of friendship, discovery, and the uplifting power of the human spirit.

Note: This is a re-release of my debut novel that was released in Jan 2013 through Etopia Press. Same title, different cover. The story has been re-edited and about 1200 words added to enhance the story, but it has not been significantly altered in any way. A weekend of hot sex can’t erase past heartbreaks, but it might lead to a better tomorrow. Molly arrives at a beautiful park, ready to spend the holiday camping with friends. This weekend is the highlight of her year-or it was, until Tanner Daivies showed up. Her high school crush is all grown up, sexy as sin, and he’s demanding answers-answers Molly isn’t sure she can give. Years ago, Molly Simpson broke his heart. When the woman he loved told him she needed space, Tanner gave it to her-for ten long years. Now he’s back. He’ll settle for closure but hopes for a future. Sex with Molly is scorching hot and brings back plenty of memories. When they’re together, it’s clear they were never meant to be apart. It may be time to deal with the past. But is reliving it worth the risk? Author’s Note: This book was previously published in 2013 in digital format only under a different publisher and cover. All rights have transferred back to the author. This book has been revised and updated to enhance the characters and story line, but the content has not been significantly altered. This book is now available in both digital and print formats. This is a short story of approximately 26,700 words (1200 longer than the original version). This book contains sexually explicit language and scenes. It is intended for a mature audience.

Where France Began

Contains documents relating to sessions held Dec. 9, 1958-Dec. 20, 1969, including Documents no 1-1022 of the 1969/1970 legislative session.

While exploring the ruins of an underwater city in 1966, a team of archaeologists encounters a mysterious being guarding an incredible secret with the power to send the world into chaos. It is a secret that will forever alter history and that some members of the expedition would kill to unveil. Meanwhile the others, once bonded with the enigmatic entity, must decide how far they will go--and what they're willing to sacrifice--to protect her.

A Global Perspective

Pacific Island Countries have been shown to be especially vulnerable to such external influences as natural disasters, political unrest and downturns in the global economy and their tourism industries have been notably affected. In particular, they typically have a narrow resource base and a fragile and often vulnerable natural environment. While there is some research on islands and small states, there is a dearth of information on the South Pacific and very little research is being undertaken in the region compared to other geographical regions in the world. This volume brings together current work in Pacific Island tourism. In this collection, three main themes arise: Images of the South Pacific; Socio-economic Impacts of Tourism; and Pacific Island Countries and the Outside World. The first focus is on the question of image, namely, stereotypes of a destination held by tourists and potential tourists, the extent to which residents, for their part, really welcome visitors, and the role tourism might play in changing pre-established images. The second theme is tourism’s impacts, notably the economic and socio-cultural effects of international tourism’s intrusion in the region which, though often hotly debated, have attracted relatively little empirical research. The third focus is on the challenges of how PICs articulate with their external geo-political and physical environment. These involve existing relations with formal colonial centres, geographical isolation, the need for greater air access to the outside world and for more tourists, and the continuing threat to several PICs of global warming, which increased air travel will inevitably exacerbate. This text will be of interest to tourism students, researchers and academics in the fields of tourism, development studies and cultural studies.

L’accompagnement social d’aujourd’hui s’inscrit dans un nouveau contexte caractérisé par l’évolution des modèles familiaux et des normes sociales relatives au bien-être des enfants et par une suractivité et de nouvelles menaces liées au contexte sécuritaire mais aussi par une contrainte budgétaire accrue, des tensions sur le marché du travail ou le marché immobilier, en particulier dans certaines régions, et par la numérisation de la société. Geneviève Gosselin-Fleury et Charles de La Verpillière invitent le ministère à étudier les pistes d’amélioration suivantes : – inventer une nouvelle relation de prescripteur à prestataire entre les états-majors et la chaîne sociale du ministère ; – avoir à cœur de respecter un principe de subsidiarité dans la répartition des rôles et des responsabilités, de manière à prendre en compte les spécificités des armées et les besoins de proximité ; – rechercher un meilleur équilibre entre compensation des contraintes de la militarité et aide sociale soumise à conditions de ressources ; – veiller à améliorer le partage de l’information, notamment statistique, entre les états-majors et les directions et services du ministère chargés du soutien ; – revaloriser l’institution de gestion sociale des armées (IGeSA) en clarifiant son image, en facilitant ses efforts de communication et en conviant l’opérateur aux temps d’information pour les familles ; – simplifier les démarches administratives, qui sont un facteur de découragement, et s’attacher à réduire les délais ; – mieux associer les publics cibles à l’élaboration des supports d’information ou des portails interactifs qui les concernent. Ils formulent plusieurs recommandations pour mieux prendre en compte les familles de militaires dans leur diversité : – aménager le calendrier des mutations en publiant en janvier au plus tard le plan annuel de mutations, pour des mutations durant l’été ; – étudier la possibilité de recourir au temps partiel, hors opérations, en fonction de la situation familiale ; – faciliter l’accès au logement des parents divorcés n’ayant pas la garde de leur enfant; – autoriser la colocation d’appartements défense vacants aux célibataires géographiques ; – renforcer et diversifier l’offre de garde d’enfants. formulent plusieurs recommandations pour mieux prendre en compte les familles de militaires dans leur diversité : – aménager le calendrier des mutations en publiant en janvier au plus tard le plan annuel de mutations, pour des mutations durant l’été ; – étudier la possibilité de recourir au temps partiel, hors opérations, en fonction de la situation familiale ; – faciliter l’accès au logement des parents divorcés n’ayant pas la garde de leur enfant; – autoriser la colocation d’appartements défense vacants aux célibataires géographiques ; – renforcer et diversifier l’offre de garde d’enfants.

Faut-il supprimer l'ENA?

Music and space in the early modern world shaped each other in profound ways, and this is particularly apparent when considering Rome, a city that defined itself as the "grande teatro del mondo". The aim of this book is to consider music and space as fundamental elements in the performance of identity in early modern Rome. Rome’s unique milieu, as defined by spiritual and political power, as well as diplomacy and competition between aristocratic families, offers an exceptionally wide array of musical spaces and practices to be explored from an interdisciplinary perspective. Space is viewed as the theatrical backdrop against which to study a variety of musical practices in their functions as signifiers of social and political meanings. The editors wish to go beyond the traditional distinction between music theatrical spectacles - namely opera - and other musical genres and practices to offer a more comprehensive perspective on the ways in which not only dramatic, but also instrumental music and even the sounds of voices and objects in the streets relied on the theatrical dimension of space for their effectiveness in conveying social and political messages. While most chapters deal with musical performances, some focus on specific aspects of the Roman soundscape, or are even intentionally "silent", dealing with visual arts and architecture in their performative and theatrical aspects. The latter offer a perspective that creates a visual counterpoint to the ways in which music and sound shaped space.

*Progress in Brain Research is the most acclaimed and accomplished series in neuroscience, firmly established as an extensive documentation of the advances in contemporary brain research. The volumes, some of which are derived from important international symposia, contain authoritative reviews and original articles by invited specialists. The rigorous editing of the volumes assures that they will appeal to all laboratory and clinical brain research workers in the various disciplines: neuroanatomy, neurophysiology, neuropharmacology, neuroendocrinology, neuropathology, basic neurology, biological psychiatry, and the behavioral sciences. This volume, *The Cerebellum and Memory Formation: Structure, Computation and Function*, covers topics including feedback control of cerebellar learning; cortico-cerebellar organization and skill acquisition; cerebellar plasticity and learning in the oculomotor system, and more. Leading authors review the state-of-the-art in their field of investigation, and provide their views and perspectives for future research The volume reflects current thinking about the ways in which the cerebellum can engage in learning, and the contributors come from a variety of research fields. The chapters express perspectives from different levels of analysis that range from molecular and cellular mechanisms through to long-range systems that allow the cerebellum to communicate with other brain areas.*

Studying Law introduces students to the fundamental legal skills that they will need to successfully study the subject, such as case analysis, legislative interpretation, problem solving and essay writing, and to the core Law subjects themselves and the distinctions between them.

The annual conference on Neural Information Processing Systems (NIPS) is the flagship conference on neural computation. It draws preeminent academic researchers from around the world and is widely considered to be a showcase conference for new developments in network algorithms and architectures. The broad range of interdisciplinary research areas repres physics, cognitive science, and many branches of engineering, including signal processing and control theory. Only about 30 percent of the papers submitted are accepted for presentation at NIPS, so the quality is exceptionally high. These proceedings contain all of the papers that were presented.

The Battle of Vouillé, 507 CE

"The results presented in this book summarize the main findings of the CARBOFOR project, which brought together 52 scientists from 14 research units to investigate the effects of future climate on the carbon cycle, the productivity and vulnerability of French forests. This book explains the current forest carbon cycle in temperate and Mediterranean climates, including the dynamics of soil carbon and the total carbon stock of French forests, based on forest inventories. It reviews and illustrates the main ground-based methods for estimating carbon stocks in tree biomass. Spatial variations in projected climate change over metropolitan France throughout the 21st century are described. The book then goes on to consider the impacts of climate change on tree phenology and forest carbon balance, evapotranspiration and production as well as their first order interaction with forest management alternatives. The impact of climate change on forest vulnerability is analysed. A similar simulation study was carried out for a range of pathogenic fungi, emphasizing the importance of both warming and precipitation changes. The consequences of climate change on the occurrence of forest fires and the forest carbon cycle in the Mediterranean zone are also considered."--Publisher.

CARGESE INSTTUJE ON DISORDER AND MIXING Convection, diffusion and reaction are the three basic mechanisms in physico-chemical hydrodynamics and chemical engineering. Both convective and diffusive processes are strongly influenced by the effect of disorder of granular matter in porous media, suspensions, fluidized beds or/and by the randomness caused in turbulent flow field. This book has been initiated by a NATO summer institute held in Cargese (Corsica, FRANCE) from June 15 th to 27 th 1987 . Its aim was to associate statistical physicists, fluid mechanicians and specialists of chemical engineering on the problems of the relation between disorder and mixing and, in this respect, this is a " premiere ". This book is made of chapters based on lectures given in the meeting. However we have paid a considerable attention to harmonize the contents and styles of chapters made by scientists trained in different communities and using different languages and techniques to describe similar problems. The Prelude by the editors of the book introduces the different points and is a biased view of some of the important and most active aspects of the subjects developed. We wish to thank all contributors and students of the institute who gave the style of the present interdisciplinary approach. We also greatly thank Elisabeth Charlaix who has shared with us the scientific and practical organisation of the institute, and Marie-France Hanseler for her technical support.

Convection, Diffusion and Reaction in Random Materials and Processes

Atopic eczema is the most common and persistent dermatological condition seen in general practice. Over the last few years, advances have been made in the genetics of atopy in general, newer treatments have been introduced for topical use, and new concepts suggested in the etiology. Thus, a new text on atopic eczema is both timely and useful. Writt Physicists, when modelling physical systems with a large number of degrees of freedom, and statisticians, when performing data analysis, have developed their own concepts and methods for making the ‘best’ inference. But are these methods equivalent, or not? What is the state of the art in making inferences? The physicists want answers. More: neural computation and understanding of how neural systems make inferences: the theory of chaotic nonlinear systems as applied to time series analysis could profit from the experience already booked by the statisticians; and finally, there is a long-standing conjecture that some of the puzzles of quantum mechanics are due to our incomplete understanding of how we make inferences. More: writing of such a book as the present one. But other considerations also arise, such as the maximum entropy method and Bayesian inference, information theory and the minimum description length. Finally, it is pointed out that an understanding of human inference may require input from psychologists. This lively debate, which is of acute current interest, is well served by this book. Below Level Reader, Grade 3 - Party Plans by the Numbers!

This volume highlights the heretofore largely neglected Battle of Vouillé in 507 CE, when the Frankish King Clovis defeated Alaric II, the King of the Visigoths. Clovis' victory proved a crucial step in the expulsion of the Visigoths from Francia into Spain, thereby leaving Gaul largely to the Franks. It was arguably in the wake of Vouillé that Gaul became Francia, and that "France began." The editors have united an international team of experts on Late Antiquity and the Merovingian Kingdoms to reexamine the battle from multiple as well as interdisciplinary perspectives. The contributions address questions of military strategy, geographical location, archaeological footprint, political background, religious propaganda, consequences (both in Francia and in Italy), and significance. There is a strong focus on the close reading of primary source-material, both textual and material, secular and theological.

For Ruby Valentine, two pets means twice the love! There's a new addition in the Valentine house: a kitten! He's soft and sweet, and Ruby is happy to have him. But not everyone shares Ruby's enthusiasm. Lovebird's feathers are more than a little ruffled. And when Valentine's Day arrives, both animals try to outdo each other to show Ruby how much they love her. Ruby's favorite day quickly turns into a mess. Can Ruby find a way to show her pets that there's room in her heart for two?
