The articles in this volume examine the notion of clausal subordination based on English, Estonian, Finnish, French, German and Japanese conversational data. Some of the articles approach 'subordination' in terms of social action, taking into account what participants are doing with their talk, considering topics such as the use of clauses as projector phrases and as devices for organizing the participant structure of the conversation. Other articles focus on the emergence of clause combinations diachronically and synchronically, taking on topics such as the grammaticalization of clauses and conjunctions into discourse markers, and the continuum nature of syntactic subordination. In all of the articles, linguistic forms are considered to be emergent from recurrent practices engaged in by participants in conversation. The contributions critically examine central syntactic notions in interclausal relations and their relevance to the description of clause combining in conversational language, to the structure of conversation, and to the interactional functions of

language.

The College of Computing and Informatics (CCI) at UNC-Charlotte has three departments: Computer Science, Software and Information Systems, and Bioinformatics and Genomics. The Department of Computer Science offers study in a variety of specialized computing areas such as database design, knowledge systems, computer graphics, artificial intelligence, computer networks, game design, visualization, computer vision, and virtual reality. The Department of Software and Information Systems is primarily focused on the study of technologies and methodologies for information system architecture, design, implementation, integration, and management with particular emphasis on system security. The Department of Bioinformatics and Genomics focuses on the discovery, development and application of novel computational technologies to help solve important biological problems. This volume gives an overview of research done by CCI faculty in the area of Information & Intelligent Systems. Presented papers focus on recent advances in four major directions: Complex Systems, Knowledge Management, Knowledge Discovery, and Visualization. A major reason for producing this book was to

demonstrate a new, important thrust in academic research where college-wide interdisciplinary efforts are brought to bear on large, general, and important problems. As shown in the research described here, these efforts need not be formally organized joint undertakings (through parts could be) but are rather a convergence of interests around grand themes.

**WILEY-INTERSCIENCE PAPERBACK SERIES** The Wiley-Interscience Paperback Series consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation. With these new unabridged softcover volumes, Wiley hopes to extend the lives of these works by making them available to future generations of

statisticians, mathematicians, and scientists. "This book will be an aid to survey statisticians and to research workers who must work with survey data." -Short Book Reviews, International Statistical Institute Measurement Errors in Surveys documents the current state of the field, reports new research findings, and promotes interdisciplinary exchanges in modeling, assessing, and reducing measurement errors in surveys. Providing a fundamental approach to measurement errors, the book features sections on the questionnaire, respondents and responses, interviewers and other means of data collection, the respondent-interviewer relationship, and the effects of measurement errors on estimation and data analysis.

***This volume describes how to conceptualize, perform, and critique traditional generalized linear models (GLMs) from a Bayesian perspective and how to use modern computational methods to summarize inferences using simulation. Introducing dynamic modeling for GLMs and containing over 1000 references and equations, Generalized Linear Models considers parametric and semiparametric approaches to overdispersed GLMs, presents methods of analyzing correlated binary data using latent variables. It also proposes a semiparametric method to model link functions for binary response data, and identifies areas of important future research and new applications of GLMs. Some benefits of studying from Oswaal JEE (Main)' Solved Papers (Question Bank) 2022 are: Chapter-wise and Topic-wise Trend Analysis: Chapter-wise Latest JEE (Main) Question Papers (Four shifts) 2021- Fully solved Previous Years' (2019-2021) Exam Questions to facilitate focused study Mind Maps: A single page snapshot of the entire chapter for longer retention Mnemonics to boost memory and confidence Oswaal QR Codes: Easy to scan QR codes for***

This book examines the evolution of basic income policy and research in advanced economies and is divided into two parts. The first section considers the development of basic income as a social policy initiative in advanced (OECD) nations from the 1960s to today. It reviews what the negative income tax experiments accomplished, their limitations, and what they can lend to the design and implementation of basic income pilots or a full blown basic

income program today. It also considers important developments and research in poverty and economic inequality and in technological change and labour market adjustment over the last half century. The second section focuses on the Canadian case, where the prospects for basic income are perhaps among the most promising. In addition to a review of Mincome and its lessons and limitations, this section considers important developments in poverty research by the Economic Council of Canada and the Canadian Senate in the 1960s, attempts at welfare reform, and the policy initiatives to develop a basic income for elderly Canadians that has endured to this day. Many of the important social and technological developments that are reviewed in the first part will be discussed in more detail with specific reference to the Canadian case. The evolution of the important policy innovations—the National Child Benefit and its successors and the Poverty Reduction Strategy—are outlined in detail and linked to other, more modest, income support initiatives such as the federal sales tax credit

that provide a potential foundation for a comprehensive basic income plan in Canada. Research, including recent microsimulation studies of a basic income, are critically reviewed. Although the COVID-19 pandemic has increased interest in basic income to support those hardest hit, the book argues for careful design of basic income policies in its aftermath rather than simplistic adoption of emergency pandemic measures.
