settings that make significant contributions to research, policy, and practice in the internationalization of higher education. This open access volume critically reviews a diverse body of scholarship and practice that informs the conceptualization, curriculum, teaching and measurement of life skills in education settings around the world. It discusses life skills as they are implemented in schools and non-formal education, providing both qualitative and quantitative evidence of when, with whom, and how life skills do or do not impact young women's and men's lives in various contexts. Specifically, it examines the nature and importance of life skills, and how they are taught. It looks at the synergies and differences between life skills educational programmes and the way in

which they promote social and emotional learning, vocational/employment education, and health and sexuality education. Finally, it explores how life skills may be better incorporated into education and how such education can address structures and relations of power to help youth achieve desired future outcomes, and goals set out in the Sustainable Development Goals (SDGs). Life skills education has gained considerable attention by education policymakers, researchers and educators as being the sine qua non for later achievements in life. It is nearly ubiquitous in global and national education policies, including the SDGs, because life skills are regarded as essential for a diverse set of purposes: reducing poverty, achieving gender equality, promoting

economic growth, addressing climate change, fostering peace and global citizenship, and creating sustainable and healthy communities. Yet, to achieve these broad goals, questions persist as to which life skills are important, who needs to learn them, how they can be taught, and how they are best measured. This book addresses these questions.

Integrating Cognitive Behavior Therapy (CBT) with a logic-based restructuring of Rational Emotive Behavioral Therapy (REBT), this book provides therapists with a guide for addressing self-defeating thoughts and behaviors. Cohen explores how the tyrannical use of the words "I can ' t" creates and sustains many commonplace behavioral and emotional problems. It shows how cognition and affect are intimately connected, demonstrating how cognitive-behavioral interventions help clients to address both their feelings and irrational ideas. Each chapter explores a specific problem, including low

frustration tolerance, obsessiveness, risk avoidance, phobias, intolerance to criticism, dependent personalities, and much more. The theories developed throughout are integrated with practice sections and session transcripts that focus on the application of these theories for the treatment of clients who have self-destructive linguistic habits. Cohen also provides resource materials including reflection activities, bibliotherapy, meditation, and step-by-step guidance. Can philosophy help ordinary people confront their personal or interpersonal problems of living? Can it help a couple whose marriage is on the rocks, or someone going through a midlife crisis, or someone depressed over the death of a significant other, or who suffers from anxiety about making a life change? These and many other behavioral and emotional problems are ordinarily referred to psychologists, psychiatrists, clinical social workers, or other mental health specialists. Less mainstream

is the possibility of consulting a philosophical counselor or practitioner. Yet, there is presently a steadily increasing, world-wide movement among individuals with postgraduate credentials in philosophy to harness their philosophical training and skills in helping others to address their life problems. But is this channeling of philosophy outside the classroom into the arena of life a good idea? Are philosophers, as such, competent to handle all or any of the myriad emotional and behavioral problems that arise in the context of life; or should these matters best be left to those trained

in psychological counseling or psychotherapy? Through a diverse and contrasting set of readings authored by prominent philosophers, philosophical counselors, and psychologists, this volume carefully explores the nature of philosophical counseling or practice and its relationship to psychological counseling and psychotherapy. Digging deeply into this relational question, this volume aims to spark more rational reflection, and greater sensitivity and openness to the potential contributions of philosophical practice. This treatise aims to fill up the lacuna and to contribute significantly to the dissemination of knowledge about the indication/contraindication, mechanism of action, ethical use, side-effects and various other facets related to topical corticosteroid. Topical corticosteroids (TC) have greatly enhanced dermatologists ' ability to effectively treat several difficult dermatoses. The available range of formulations and potencies allows them to flexibly treat all groups of patients, different phases of disease, and different anatomic sites. Improper/incomplete knowledge about topical corticosteroids ' mechanism of action, indications,

classifications, and contraindications has produced a rapid rise in the incidence of improper use of these drugs, which could potentially bring disrepute to this entire group of amazing drugs. Responsibility for disseminating proper knowledge regarding when, where, and how to use TC both to internists and patients primarily rests with dermatologists. In this regard, the benefits of rational and ethical use and the potential harm of overuse and misuse for nonmedical, especially cosmetic purposes, should be clearly conveyed before prescribing TC.
