an intriguing paradox. This book, published to considerable critical acclaim, explores the paradox and attempts to provide a distinct model' of the changes that comprised the industrial revolution.

Carrying forward the legacy of original author Terry Jordan-Bychkov, Mona Domosh and new coauthors Roderick Neumann and Patricia Price offer this thoroughly updated new edition of the acclaimed introduction to the cultural geography of the world today. The result is a text that maintains its original distinctive style while addressing contemporary issues and situations that students care about, most importantly, the continuing

phenomenon of globalization. The Thematic Approach of The Human Mosaic The Human Mosaic introduces five themes in the opening chapter—culture region, cultural diffusion, cultural ecology, cultural interaction, and cultural landscape—then uses those themes as a framework for the topical chapters that follow. Each theme is applied to a variety of geographical topics: demography, agriculture, the city, religion, language, ethnicity, politics, industry, folk and popular culture. Through this organization, students are able to relate to the most important aspects of cultural geography at every point in the text.

How Humans Evolve from Insignificant Apes to Become the Rulers of the World This book is a summary of “Sapiens: A Brief History of Humankind,” by Yuval Noah Harari. In Sapiens, Professor Yuval Noah Harari focuses on the three great revolutions of human history: Cognitive, Agricultural, and Scientific. He presents a hypothesis about how Homo sapiens transforms from an animal of no significance 70,000 years ago to become the rulers of the Earth. Earlier human species such as Homo neanderthalensis in Europe and Homo erectus in Asia had climate and environmental adaptations that sapiens did not have. The Cognitive Revolution between 70,000 and

30,000 years ago enabled the sapiens to form elaborate cultures and communicate in fiction. Myths, religions, moral codes, nations, corporations, and money are fiction that shapes human societies, allowing them to speak the same language and share the same customs, beliefs, rituals, and dreams. Fiction also allowed them to cooperate in groups, giving them a military and security advantage and encouraging specialization which eventually gave them a technological advantage. This book tells the story of how these three revolutions have affected humans since the start of the Cognitive Revolution. This guide includes: * Book Summary—helps

“Civilization: The West and the Rest,” by Niall Ferguson. The central question is: Why did the West dominate the Rest and not vice versa? The book describes six concepts that the West has developed that allow them to leap ahead of the Rest, unleashing the Industrial Revolution and increasing human productivity. Six hundred years ago, Ming China and Ottoman Turkey dominated the world civilizations, while Western Europe was a miserable backwater, devastated by incessant war and disease. But today, Western civilization has risen to global dominance. How has the West overtaken its Eastern rivals in the past 500 or so

years? In Civilization, Niall Ferguson argues that beginning in the 15th century, the West developed six powerful concepts that the Rest lacked: competition, science, property rights, medicine, consumerism, and work ethic. These six killer apps allowed the West to leap ahead of the Rest, unleashing the Industrial Revolution and increasing human productivity. Yet now, the days of Western predominance are numbered because the Rest are adopting these same concepts, while the West has lost faith in its own civilization. Read this book and learn how these six killer apps help the West dominate the world. This guide includes

The Industrial Revolution, powered by oil and other fossil fuels, is spiraling into a dangerous endgame. The price of gas and food are climbing, unemployment remains high, the housing market has tanked, consumer and government debt is soaring, and the recovery is slowing. Facing the prospect of a second collapse of the global economy, humanity is desperate for a sustainable economic game plan to take us into the future. Here, Jeremy Rifkin explores how Internet technology and renewable energy are merging to create a powerful "Third Industrial Revolution." He asks us to imagine

hundreds of millions of people producing their own green energy in their homes, offices, and factories, and sharing it with each other in an "energy internet," just like we now create and share information online. Rifkin describes how the five-pillars of the Third Industrial Revolution will create thousands of businesses, millions of jobs, and usher in a fundamental reordering of human relationships, from hierarchical to lateral power, that will impact the way we conduct commerce, govern society, educate our children, and engage in civic life. Rifkin's vision is already gaining traction in the international community. The European Union Parliament has issued a formal declaration calling for its implementation, and
