For better or worse, museums are changing from forbidding bastions of rare art into audience-friendly institutions that often specialize in “blockbuster” exhibitions designed to draw crowds. But in the midst of this sea change, one largely unanswered question stands out: “What makes a great exhibition?” Some of the world’s leading curators and art historians try to answer this question here, as they examine the elements of a museum exhibition from every angle. *What Makes a Great Exhibition?* investigates the challenges facing American and European contemporary art in particular, exploring such issues as group exhibitions, video and craft, and the ways that architecture influences the nature of the exhibitions under its roof. The distinguished contributors address diverse topics, including Studio Museum in Harlem director Thelma Golden’s examination of ethnically-focused exhibitions; and Robert Storr, director of the 2007 Venice Biennale and formerly of the Museum of Modern Art, on the meaning of “exhibition and “exhibitionmaker.” A thought-provoking volume on the practice of curatorial work and the mission of modern museums, *What Makes A Great Exhibition?* will be indispensable reading for all art professionals and scholars working today.

This Technical Note discusses findings of interconnectedness and spillover analysis on Italy. The market-based measures of tail risks and interconnectedness among key banks and insurance companies in Italy have declined from their peak but remain at elevated levels. Although the stress on Banca Monte dei Paschi di Siena has been manifesting on its own, the market perception about the condition of the banks appears to be increasingly contaminating the market views on other Italian financial institutions. It is also observed that exogenous factors, such as the Italian sovereign, are the key source of systemic risk for the market pricing of Italian financial institutions.

water cycle. It takes a fresh look at the fundamentals and challenges in hydrologic and hydroclimatic systems as well as climate change. The author describes the application of nontraditional data sets and new investigation techniques to water-related problems. He also examines long lead forecasting and simulation, time series analysis, and risk and uncertainty in hydrologic design.

“Reminiscent of Ursula Le Guin’s paradigm-shattering *The Left Hand of Darkness*, this piercingly moving story belongs in most fantasy collections.”—Library Journal

There are secrets beneath her skin. Sorykah Minuit is a scholar, an engineer, and the sole woman aboard an ice-drilling submarine in the frozen land of the Sigue. What no one knows is that she is also a Trader: one who can switch genders suddenly, a rare corporeal deviance universally met with fascination and superstition and all too often punished by harassment or death. Sorykah’s infant twins, Leander and Ayeda, have inherited their mother’s Trader genes. When a wealthy, reclusive madman known as the Collector abducts the babies to use in his dreadful experiments, Sorykah and her male alter-ego, Soryk, must cross icy wastes and a primeval forest to get them back. Complicating the dangerous journey is the fact that Sorykah and Soryk do not share memories: Each disorienting transformation is like awakening with a jolt from a deep and dreamless

sleep. The world through which the alternating lives of Sorykah and Soryk travel is both familiar and surreal. Environmental degradation and genetic mutation run amok; humans have been distorted into animals and animal bodies cloak a wild humanity. But it is also a world of unexpected beauty and wonder, where kindness and love endure amid the ruins. Alluring, intense, and gorgeously rendered, *Ice Song* is a remarkable debut by a fiercely original new writer. Praise for *Ice Song* “A stunning debut fantasy about love and the ties of blood.”—*Armchair Interviews* “Kasai’s debut is a boldly adventurous tale depicting a richly detailed world. The aspect of Traders shifting gender brings Ursula K. LeGuin’s *The Left Hand of Darkness* to mind, while the activities on Chen’s island are more reminiscent of Laurell K. Hamilton’s *Meredith Gentry* novels.”—*Booklist* “*Ice Song* is definitely a compelling read, largely due to the fact that Sorykah is such a well-developed character. She has an equally intense and complex sense of love and resentment for her children. And the fact that she exists between the world of humans and the mutants is also a source of conflict for her character . . . *Ice Song* is a near-perfect combination of fantasy, great storytelling and social commentary.”—*Philadelphia Gay News*

from her background as a physician, a professor of medicine, a

therapist, and a long-term survivor of chronic illness, invites us

to listen from the soul. This remarkable collection of true stories

draws on the concept of 'kitchen table wisdom', the human

tradition of shared experience that shows us life in all its power

Global warming seen from the other side: by the end of the last ice age, the earth had lost most of its large animal species and most of its humans. In a novel approach the author argues that the main cause of this catastrophic extinction was a drastic reduction in atmospheric carbon dioxide, due to the long period of cold, and he backs up his theory with scientific explanations given in clear language for the general reader. The author explores the causes

of Earth's cyclical temperature changes and shows how those temperature shifts touch off a chain of events in the atmosphere, in the oceans and on land. Cold temperature was the trigger; and the resultant reduction in carbon dioxide, he argues, was the bullet that killed off so many species. The re-warming released more carbon dioxide into the atmosphere and fueled a resurgence which we are still enjoying. In addition, the author describes the human responses to increases in atmospheric carbon dioxide after the last ice age and in the last 150 years. Near the end of the last ice age, atmospheric carbon dioxide was about half of what it is today. Due to the lack of carbon dioxide, most of the vegetation disappeared from the middle and high latitudes. Without plants to eat, many large animals became extinct; North America lost three-fourths of its large animals including the woolly mammoth, mastodon, and saber tooth cat. Humans, too, had little to eat in these areas and their population declined dramatically. The book then explains how and why atmospheric carbon dioxide increased by about 50% after the last ice age ended, encouraging a population explosion among plants, animals and humans, all of which then migrated into many previously barren areas. More recently, the 28% increase in atmospheric carbon dioxide in the last 150 years has caused a six-fold increase in the human population. Changes in the next 300 years will reverse some of the current trends. There have been some books on the causes of extinction over

the last forty years, but all looked at other causes and none examined the role of low atmospheric carbon dioxide. This book has value for anyone interested in the ice age extinction; glaciers; the glacial cycle; the atmosphere and oceans; the past and future of plants, animals, and humans. It provides long-term information on atmospheric carbon dioxide, global warming and cooling.
