Focusing on three pairs of case studies written by internationally acclaimed experts, the book provides a powerful analysis of the different ends of an ideological spectrum---from strong state investments in public education to market-based approaches. An introductory chapter offers an overview of the theories guiding both neoliberal reforms such as those implemented in Chile, Sweden and the United States with efforts to build strong and equitable public education systems as exemplified by Cuba, Finland and Canada. The pairs of case studies that follow examine the historical evolution of education within an individual country and

engage in to systematically examine their practice, with the goal of becoming more effective.

Originating in Japan, lesson study has gained significant momentum in the mathematics education community in recent years. As a process for professional development, lesson study became highly visible when it was proposed as a means of supporting the common practice of promoting better teaching by disseminating documents like standards, benchmarks and nationally validated curricula. While the body of knowledge about lesson study is growing, it remains somewhat elusive and composed of discrete

research endeavors. As a new research area there is no coherent knowledge base yet. This book will contribute to the field bringing the work of researchers and practitioners together to create a resource for extant work. This book describes several aspects of Lesson Study, amongst others: it gives an historical overview of the concept, it addresses issues related to learning and teaching mathematics, it looks at the role of the teacher in the process. The last two sections of the book look at how lesson Study can be used with preservice mathematics teachers and at university mathematics methods teaching.

How Privatization and Public Investment Influence Education Outcomes

The way you parent, the clothes you buy, your relationships with your boss and your daughter, your attitude to money and sex, are, to an extraordinary extent, defined by the era into which you were born. Parents, the church, teachers and employers think they understand youngsters because they, too, were young once. But adults no longer live in the world that existed when they were teenagers. We may occupy the same space, home, classroom or office but we live in different worlds. And these

worlds often collide. We've moved in one century from a 'built to last' to a 'throwaway' society. No wonder age differences are so vast. In this book you will discover your generation and those of the people who make up your life. Once you understand what makes them, and you, tick, the 'gen gap' begins to shrink. Fasten your seatbelt for a generational roller coaster ride - you may never think the same way again! In this book you'll understand why: your boss insists on endless meetings and conferences; your 20-something student doesn't want a 50-something computer

teacher; you're in your 40s but still trying to prove yourself to Mom and Dad; your teacher should be learning from you.

A brief version of the author's larger text. The book provides separate chapters on each of the five most commonly used teaching models: direct instruction; co-operative learning; project-based teaching; discussion; and independent study.

Contextual teaching and learning (CTL) is a system for teaching that is grounded in brain research. Brain research indicates that we learn best when we see meaning in new tasks and

material, and we discover meaning when we are able to connect new information with our existing knowledge and experiences. Students learn best, according to neuroscience, when they can connect the content of academic lessons with the context of their own daily lives. Johnson discusses the elements of the brain-compatible contextual teaching and learning system: making meaningful connections; investing school work with significance; self-regulated learning; collaboration; critical and creating thinking; nurturing the individual; reaching high

standards; and using authentic assessment.

Drawing on the practices of teachers in kindergarten through university, Johnson provides numerous examples of how to use each part of the CTL system.

Strategy is the most central issue in

management. It has to do with defining the purpose of an organization, understanding the market in which it operates and the capabilities the firm possesses, and putting together a winning plan. There are many influential frameworks to help managers undertake a systematic reflection on this issue. The most dominant approaches are Michael Porter's "Competitive Strategy" and the "Resource-Based View of the Firm," popularized by Gary Hamel and C.K. Prahalad. Arnaldo Hax argues there are fundamental drawbacks in the underlying hypotheses of these approaches in that they define strategy as a way to achieve sustainable competitive advantage. This line of thinking could be extremely dangerous

because it puts the competitor at the center and therefore anchors you in the past, establishes success as a way of beating your competitors, and this obsession often leads toward imitation and congruency. The result is commoditization - which is the worst outcome that could possibly happen to a business. The Delta Model is an extremely innovative view of strategy. It abandons all of these assumptions and instead puts the customer at the center. By doing that it allows us to be truly creative, separating ourselves from the herd in pursuit of a unique and differentiated customer value proposition. Many years of intense research at MIT, supported by an extensive consulting practice, have resulted in development of powerful

new concepts and practical tools to guide organizational leaders into a completely different way of looking at strategy, including a new way of doing customer segmentation and examining the competencies of the firm, with an emphasis on using the extended enterprise as a primary way of serving the customer. This last concept means that we cannot play the game alone; that we need to establish a network among suppliers, the firm, the customers, and complementors – firms that are in the business of developing products and services that enhance our own offering to the customer. Illustrated through dozens of examples, and discussion of application to small and medium-sized businesses and not-for-profits, the Delta Model will help readers in all

The Aalborg PBL Model

This volume outlines the assumptions and beliefs that distinguish the concept of the reflective teacher from the view of the teacher as passive and a mere technician -- a

view that teacher education programs and schools have historically promoted. The authors demonstrate how various conceptions of reflective teaching differ from one another. They believe that it is only through teachers' reflections on their own teaching that they become more skilled, more capable, and in general better teachers. This is the first volume in the "Reflective Teaching and the Social Conditions of Schooling" series. The major goal of

both this book and of all of the volumes to follow in this series is to help teachers explore and define their own positions with regard to the topics and issues at hand within the context of the aims of education in a democratic society.
