harmonization of the rules by which companies calculate their taxable profits. In particular, the initiative hopes to remedy the severe barrier to cross-border business caused by the ‘ the accounting Tower of Babel ’ by which companies ’ tax bases are determined under national law. This thorough analysis and commentary covers the influence of accounting rules on tax, considering both generally accepted standards – international accounting standards (IAS) and international financial reporting standards (IFRS) – and EU Directive 2013/34. Three introductory chapters usher in detailed comparative overviews of the effect of these rules on taxation in nine EU Member States as well as in two other major EU trading partners, the United States and Brazil. Fully explaining the remarkable recent improvement in the comparability of accounts that represent favourable preconditions for creating a single market for financial services within the EU, this book covers every relevant detail, including the following and much more: – criterion of evaluation of alternative fixed assets based on revaluated amounts; – criterion based on fair value; – provisions applicable to income statements, notes, reports, and financial statements; – rules applicable to the publication of documents; – transparency in payments to governments; – dispositions on exemptions; – hierarchy of general provisions and principles; – balance sheet and profit and loss account; – simplifications for small and medium-sized enterprises (SMEs); – system of creditors ’ protection; and – protection of investors ’ interests. ### *PwC Manual of Accounting IFRS 2013 Pack*

For decades, companies have used custom metrics that don't conform to generally accepted accounting principles (GAAP) or international financial reporting standards (IFRS) as supplements to their official financial statements. Some common non-GAAP measures include adjusted earnings before interest, taxes, depreciation, and amortization (known as adjusted EBITDA), free cash flow, funds from operations, adjusted revenues, adjusted earnings, adjusted earnings per share, and net debt. However, as the authors point out, it's not unusual for these alternative measures to lead to problems. Since companies devise their own methods of calculation, it's difficult to compare the metrics from company to company - or, in many cases, from year to year within the same company. According to the authors, alternative measures, once used fairly sparingly and shared mostly with a small group of professional investors, have become more ubiquitous and further and further disconnected from reality. In 2013, McKinsey and Company found that all of the 25 largest U.S.-based nonfinancial companies reported some form of non-GAAP earnings. Press releases and earnings-call summaries often present non-GAAP measures that are increasingly detached from their GAAP-based equivalents. In addition to creating potential problems for investors, the authors argue, alternative metrics can harm companies themselves by obscuring their financial health, overstating their growth prospects beyond what standard GAAP measures would support, and rewarding executives beyond what is justified. Board members, top executives, compliance officers, and corporate strategists need to make sure that whatever alternative measures companies use improve transparency and reduce bias in financial reports. Although no standard is perfect, the authors note that GAAP and IFRS standards provide a foundation for consistent
