International Harmonization Of Financial Regulation

International Accounting Harmonization analyzes the differences between national accounting rules and international accounting methods, showing that when firms adopt international accounting standards they achieve significantly higher positive coefficients compared with firms that only take on local accounting strategies.

From the beginning of January 2005 publicly traded companies

in the European Union have to comply with the International Financial Reporting Standards (IFRS) for their consolidated accounts, as required by 1606/2002 European Commission Regulation. It had been suggested that the new accounting rules will facilitate not only the process of international harmonization of financial statements, but also efficient performance of financial markets and capital flows worldwide. This study analyzes the first results of IFRS implementation by Spanish non-financial listed companies.
In the globalizing economy, national policymakers are often

forced to accept the challenge of financial integration. Faced with the potentially destabilizing effects of international financial markets, they have to strengthen financial regulation, importing international best practices and aligning domestic with foreign regulation to avoid destabilizing phenomena of regulatory arbitrage. This paper explores the main features of the ongoing process of worldwide financial regulatory convergence and the role played by the global dissemination of financial standards and codes. It analyzes the reasons behind the generalized acceptance of

international best practices and the limits of the standards and codes approach to financial regulatory harmonization.
Prior scholarship advocates for international harmonization of financial regulation as a solution to the problem of cross-border regulatory arbitrage. The scholarship is theoretical, and rests on the contention that financial institutions can simply depart from an unfavorable regulatory regime. This paper contributes an empirical foundation to the concern that financial institutions relocate following regulation, while also deeply qualifying claims that

effective regulation requires international harmonization. Using experience from swap markets following the Dodd-Frank Act, this paper provides the first empirical evidence that financial institutions migrate in response to derivatives regulation. This paper shows that U.S. banks substantially shifted inter-bank swap trading offshore while the delivery of swaps to U.S. customers did not decline.Building on this case study, the article develops theory for what policy goals are more susceptible to subversion through migration. Policy goals concerned with regulating relationships between financial institutions and their customers (e.g., goals of customer protection) are less vulnerable to relocation than policy goals concerned with relationships between financial institutions (e.g., reduction of systemic risk). This distinction reflects pragmatic priors on the relative costs and benefits of cross-border arbitrage to providers of financial services and their customers. In exploring how relocation skirted some regulations and alternative regulatory designs for achieving the same policy goals, the article solves a longstanding puzzle for international regulation. The claim that financial institutions can avoid territorially bounded regulation appears, on its face, suspect. If an institution truly removes its operations, what legitimate interest does a jurisdiction retain in regulating that institution? Through examining how operations may be restructured across borders, the article shows that a lack of harmonization: (a) does not affect whether a jurisdiction can in the abstract unilaterally implement its policy goals, but (b) does narrow the range of regulatory designs available to achieve policy goals. Absent harmonization, jurisdictions may be limited to regulatory designs that are more difficult to implement, for instance, due to political constraints or greater administrative burdens.

Global Governance of Financial Systems
International Harmonization of Financial Regulation?The Politics of Global Diffusion of the Basel Capital AccordRoutledge
From home mortgages to i-phones, basic elements of our daily lives depend on international economic markets. The astonishing complexity of these exchanges may seem ungoverned. Yet the global economy remains deeply

bound by rules. Far from the staid world of treaties and state-to-state diplomacy, economic governance increasingly relies on a different class of international market regulation - soft law - comprised of voluntary standards, best practices, and recommended guidance created by a motley assortment of international organizations. Voluntary Disruptions argues that international soft law is deeply political, shaping the winners and losers of globalization. Some observers focus on soft law's potential to solve problems and coordinate market participants. Voluntary

Disruptions widens the discussion, shifting attention to the ways soft law provides new political resources to some groups while not to others and alters the sites of contestation and the actors who participate in them. Highlighting two mechanisms - legitimacy claims and arena expansion - the book explains how soft law, typically viewed as limited by its voluntary nature, disrupts and transforms the politics of economic governance. Using financial regulation as its laboratory, Voluntary Disruptions explains the remarkable pre-crisis *alignment of US and European approaches to governing markets, the rise and prominence of transnational industry associations in the 1990s and 2000s, and the ambivalence of US reforms towards international market cooperation in the wake of the 2008 financial crisis. Rethinking scholarly and policy approaches to international soft law, this volume answers enduring and pressing questions about global finance, International Relations, and power. Transformations in Governance is a major new academic book series from*

Oxford University Press. It is designed to accommodate the impressive growth of research in comparative politics, international relations, public policy, federalism, and environmental and urban studies concerned with the dispersion of authority from central states to supranational institutions, subnational governments, and public-private networks. It brings together work that advances our understanding of the organization, causes, and consequences of multilevel and complex governance. The series is selective, containing annually a small number of *books of exceptionally high quality by leading and emerging scholars. The series is edited by Liesbet Hooghe and Gary Marks of the University of North Carolina, Chapel Hill, and Walter Mattli of the University of Oxford. This Article uses a rational choice analysis to simplify the increasingly complex area of international financial regulation. It proceeds by identifying four "interdependence problems" relating to harmonization of financial standards, capital requirements, bank resolution procedures, and an international lender of last* *resort -- in which the globalization of finance creates potential benefits from regulatory cooperation between countries. It finds that interdependence problems that relate to the efficiency gains made available by cross-border financial integration are more amenable to international regulation than are efforts to reduce losses from financial instability, which will likely continue to be ineffective despite active reforms in response to the global financial crisis.A policy implication is that ambitious proposals for a legal body to centrally administer* *international financial regulation are unlikely to succeed, because they misstate the underlying dynamics of the interdependence problems that are specific to international finance. Instead, this Article argues that certain incremental reforms, such as international harmonization of bank resolution plans and provision of a regional lenders of last resort, provide a more promising avenue for reform.This Article constitutes a reframing of the literature on international financial regulation, because it seeks to show that a state-centered rational choice approach can* *provide greater clarity and explanatory power than competing scholarship that commonly incorporates more complicated variables. In particular, the Article argues that the influential literatures on "transgovernmental networks" of regulators and the international "soft law" that they create overstate both the extent and efficacy of these mechanisms for international cooperation on finance and international law generally. The past several decades have been a time of rapid globalization in the development, manufacture, marketing, and distribution of* *medical products and technologies. Increasingly, research on the safety and effectiveness of new drugs is being conducted in countries with little experience in regulation of medical product development. Demand has been increasing for globally harmonized, science-based standards for the development and evaluation of the safety, quality, and efficacy of medical products. Consistency of such standards could improve the efficiency and clarity of the drug development and evaluation process and, ultimately, promote and enhance product quality and*

the public health. To explore the need and prospects for greater international regulatory harmonization for drug development, the IOM Forum on Drug Discovery, Development, and Translation hosted a workshop on February 13-14, 2013. Discussions at the workshop helped identify principles, potential approaches, and strategies to advance the development or evolution of more harmonized regulatory standards. This document summarizes the workshop.

IFRS Introduction and Its Effect on Listed Companies in Spain

In recent years, technological progress and regulatory changes have led to the progressive integration of international *financial markets. In that context, banks' cross-border activities have become increasingly important, raising new problems for regulators that have remained nationally bounded. This trend has spurred a debate on the costs and benefits of the international harmonization of bank regulation. As a specific example, in the EU the introduction of the Euro and the single market have raised the question of whether a* *continental regulatory agency would be necessary or desirable. In the years leading up the global financial crisis, the European Union (EU) had emerged as a central actor in global financial governance, almost rivalling the United States in influence. While the USA and the EU continue to dominate financial rule setting in the post-crisis world, the context in which they do so has changed dramatically.*

Pre-crisis ideas about laissez-faire regulation have been discarded in favour of more interventionist ones. The G20 and the Financial Stability Board have been charged with stronger coordination of global efforts. At the same time, jurisdictions have re-emphasized the need "to get their own regulatory house in order" before committing to further global harmonization. And through banks failures *and massive bail-outs, the financial sector – hitherto a driving force behind the cross-border integration of finance – has been reconfigured. This book asks a straightforward question: what have these and other key post-crisis trends in global finance done to the position that the European Union occupies in it? The contributions to this book analyse the link between financial governance in the European Union and on*

the global level from diverse theoretical angles, and they cover the main issues that will shape the future European role on the global regulatory stage. This book was published as a special issue of the Journal of European Public Policy.
Regulatory Competition in Global Financial Markets the Case for a Special Resolution Regime evaluates the power of market pressure on the way financial regulation is made. It

argues that the phenomena of arbitrage and competition in financial rulemaking are potentially more problematic than elsewhere. The resulting dynamics may require regulatory intervention: the traditional response has been to promote international harmonization of legal rules with extraterritorial reach as a comparable unilateral response. In contrast to these traditional concepts,

the author introduces the benefits that a special resolution regime for financial institutions can bring to the debate arguing that resolution regimes can help introduce market discipline and that threats to market stability can be eliminated where an effective and credible global framework is in place."
Scholarly Research Paper from the year 2010 in the subject Business economics - Accounting

and Taxes, grade: 1,0, University of Applied Sciences Regensburg (Betriebswirtschaft), course: Internationale Rechnungslegung (International Accounting), language: English, abstract: Globalization continues, even in international reporting. There are many efforts for an international harmonization of financial reporting, even at capital markets of the United States of America. The

globalization requires transparent accounting and reporting standards for an efficient market transfer of goods and services. And there has been still reached nearly a harmonization of consolidated financial statements of capital market oriented companies through IFRS. But does also German small and mediumsize enterprises (SMEs) require the same harmonization for its daily business or does there are more drawbacks

as advantages for them?

International Harmonization of Financial Regulation?
International Survey of

Integrated Financial Sector Supervision

Extensive literature already exists on the causes and development of the recent financial crisis and the political measures taken to manage it. This book brings together a group of renowned social scientists to focus on the interplay between international, European and national decision-making processes in the reform of financial market regulation. Are those states affected by the crisis adopting internationally negotiated regulations? Or are they instead determining the European and international reform agenda? Are the policies being agreed contributing to greater harmonization of financial regulation in a multilevel political system? Or is the process being dominated by differing national interests? The dominant concern of this book is the way in which the given multilevel structure of financial market regulation has shaped the reform process triggered by the recent financial crisis. Following an agreed set of questions, an international group of scholars deal in separate chapters with the role in the reform process played by international organizations, European authorities, and regulators in the USA, the United Kingdom, and Germany. To provide a detailed view of the vertical and horizontal interactions between these actors, the analysis focuses on a small set of reform issues, including bank structure, bank capital, resolution, and OTC trading of derivatives. The analysis shows to what extent actors at a given political level have both responded to, and shaped reform initiatives in other countries and at other political levels. Consideration is also given to a general shift in international governance, using

financial market regulation as a case in point. The final chapter summarizes the pattern of multilevel policy-making resulting from the empirical analyses, highlighting features that distinguish it from familiar studies of multilevel governance in federal regimes and in the European Union.
In the globalizing economy, national policymakers are often forced to accept the challenge of financial integration. Faced with the potentially destabilizing effects of international financial markets, they have to strengthen financial regulation, importing international best practices and

aligning domestic with foreign regulation, to avoid destabilizing phenomena of regulatory arbitrage. Jordan and Majnoni explore the main features of the ongoing process of worldwide financial regulatory convergence and the role played by the global dissemination of financial standards and codes. They analyze the reasons behind the generalized acceptance of international best practices and the limits of the standards and codes approach to financial regulatory harmonization. This paper--a joint product of the Financial Sector Operations and Policy Department and the

Cofinancing and Project Finance Group, Legal Vice Presidency--is part of a larger effort in the Bank to study the impact of financial regulation on economic development.
This book presents the most current trends in the field of finance and accounting from an international perspective. Featuring contributions presented at the 17th Annual Conference on Finance and Accounting at the University of Economics in Prague, this title provides a mix of research methods used to uncover the hidden consequences of accounting convergence in the

private (IFRS) and public sectors (IPSAS). Topics covered include international taxation (from both the micro- and macroeconomic level), international investment, monetary economics, risk management, management accounting, auditing, investment capital, corporate finance and banking, among others. The global business environment shapes the international financial flows of finance and the demand for international harmonization of accounting. As such, the field of global finance and accounting has encountered some new challenges. For example, policy-makers and regulators are forced to restructure their tools to tackle with new features of trading at global capital markets and international investment. This book complements this global view of development with country-specific studies, focusing on emerging and transitioning economies, which are affected indirectly and in unforeseen ways. The combination of global perspective and local specifics makes this volume attractive and useful to academics, researchers, regulators and policy-makers in the field of finance and accounting.

Analysing the emerging international legal framework governing financial institutions and markets, including monetary policies and monetary regulation, this book addresses the cross border issues that arise within this area. It highlights the lack of formal international law present, and shows how this contributed to the global financial crisis.

International Financial Institutions and Global Legal Governance

International Cooperation, Convergence and Harmonization of Pharmaceutical Regulations
Workshop Summary
International Soft Law, Finance, and Power
Setting Standards for the International Financial System
The European Single Market in financial services, the quest for international harmonization of supervisory practices and the numerous failures of financial institutions during recent years - notably BCCI - have highlighted the need for a reappraisal of the regulation of financial markets and institutions. Focusing on the banks incorporated in the Golden

Triangle - London, New York and Tokyo - this book compares and assesses the regulatory and supervisory frameworks established to protect depositors and investors and preserve overall financial stability. Understanding the current state of affairs and tools available in the study of international finance is increasingly important as few areas in finance can be divorced completely from international issues. International Finance reflects the new diversity of interest in international finance by bringing together a set of chapters that summarizes and synthesizes developments to date in the many and varied areas that are now viewed as having international content. The book attempts to differentiate between what is known, what is believed, and what is still being debated about international finance. The survey nature of this book involves tradeoffs that inevitably had to be made in the process given the vast footprint that constitutes international finance. No single book can cover everything. This book, however, tries to maintain a balance between the micro and macro aspects of international finance. Although each chapter is self-contained, the chapters form a logical whole that follows a logical sequence. The book is organized into five broad categories of interest: (1) exchange rates and risk management, (2) international financial markets and institutions, (3) international investing, (4) international financial management, and (5) special topics. The chapters cover market integration, financial crisis, and the links between financial markets and development in some detail as they relate to these areas. In each instance, the contributors to this book discuss developments in the field to date and explain the importance of each area to finance as a field of study. Consequently, the strategic focus of the book is both broad and narrow, depending on the reader's needs. The entire book provides a broad picture of the current state of international finance, but a reader with more focused interests will find individual chapters illuminating on specific topics.

Financial instability threatens the global economy. The volatility of capital movements across national borders has led many observers to argue for a reformed "global financial architecture," a body of consistent rules and institutions to prevent financial crises. Yet regulators have a decidedly mixed record in their attempts to create global standards for the financial system. David Andrew Singer seeks to explain the varying pressures on regulatory agencies to negotiate internationally acceptable rules and suggests that the variation is largely traceable to the different domestic political pressures faced by regulators. In Regulating Capital, Singer provides both a theory of the effects of domestic pressures on international regulation and a detailed analysis of regulators' attempts at international rulemaking in banking, securities, and insurance. Singer addresses the complexities of global finance in an accessible style, and he does not turn away from the more dramatic aspects of globalization; he makes clear the international implications of bank failures and stock-market crashes, the rise of derivatives, and the catastrophic financial losses caused by Hurricane Katrina and the events of September 11.

In the past 15 years, financial regulators from the developed world have attempted to create international regulatory standards in a variety of financial issue areas. Their negotiations are notable for the stark variation in the preferences of regulators toward international regulatory harmonization. Certain regulators actively resist any attempts at regulatory harmonization, while others are vocal in their advocacy for an international agreement. When will regulators seek to harmonize their rules with their foreign counterparts? I propose a principal-agent framework for analyzing regulator behavior that views international harmonization as a means of satisfying domestic political pressures. The framework predicts that regulators are more likely to seek international regulatory harmonization when confidence in the stability of financial institutions is declining, and when competitive pressures are increasing from foreign firms facing less stringent regulations. I explore the consistency of the framework with two important cases in the history of international financial regulation: the negotiations among bank regulators leading up to the 1988 Basel Accord on bank capital adequacy, and the negotiations among securities regulators over capital adequacy for securities

firms between 1988 and 1992.

Reframing International Financial Regulation After the Global Financial Crisis
The Harmonization of International Commercial Law
The turmoil in financial markets that resulted from the 2007 subprime mortgage crisis in the United States indicates the need to dramatically transform regulation and supervision of financial institutions. Would these institutions have been sounder if the 2004 Revised Framework on International Convergence of Capital Measurement and Capital Standards (Basel II accord)—negotiated between 1999 and 2004—had already been fully implemented? Basel II represents a dramatic change in capital regulation of large banks in the countries represented on the

Basel Committee on Banking Supervision: Its internal ratings–based approaches to capital regulation will allow large banks to use their own credit risk models to set minimum capital requirements. The Basel Committee itself implicitly acknowledged in spring 2008 that the revised framework would not have been adequate to contain the risks exposed by the subprime crisis and needed strengthening. This crisis has highlighted two more basic questions about Basel II: One, is the method of capital regulation incorporated in the revised framework fundamentally misguided? Two, even if the basic Basel II approach has promise as a paradigm for domestic regulation, is the effort at extensive international harmonization of capital rules and supervisory practice useful and *appropriate? This book provides the answers. It evaluates Basel II as a bank regulatory paradigm and as an international arrangement, considers some possible alternatives, and recommends significant changes in the arrangement.*

International accounting standards tend to converge, as do auditing, enforcement and corporate governance, whereas trading of equity shares remains essentially national. The book provides a thorough analysis of what information investors really need, how financial accounting systems developed and their current requirements in major commercial countries, and examines current issues, particularly the benefits and costs a single or multiple accounting standards, the bases for accounting standards, and limitations

to accounting disclosure in financial statements.

Conclusion: Legal Pluralism and the Creation of Standards within the Process of Globalisation¿Analytical Summary and Theoretical and Practical

Implications. Bibliography. Financial intermediation and financial services industries have undergone many changes in the past two decades due to deregulation, globalization, and technological advances. The framework for regulating finance has seen many changes as well, with approaches adapting to new issues arising in specific groups of countries or globally. The objectives of this paper are twofold: to review current international thinking on what regulatory framework is needed to develop a financial sector that is stable, yet efficient, and provides proper access to households and firms; and to review the key experiences regarding international financial architecture initiatives, with a special focus on issues arising for

developing countries. The paper outlines a number of areas of current debate: the special role of banks, competition policy, consumer protection, harmonization of rules-across products, within markets, and globally-and the adaptation and legitimacy of international standards to the circumstances facing developing countries. It concludes with some areas where more research would be useful.

Adopting Universal Information Methods for a Global Financial System

A detailed and scholarly historical study of the International Accounting Standards Committee (IASC), which prepared the way for the International Accounting Standards Board (IASB). The IASB holds the dominant influence over the financial reporting of thousands of listed companies in the European Union as well as in many other countries.

'How and why do transnational regulatory bodies emerge? How do they acquire the authority and confidence to be actors in their own right? These questions preoccupy scholars in many disciplines and Sebastian Botzem's The Politics of Accounting Regulation makes an important contribution to the debates.

Focusing on the case of the International Accounting Standards Board over a critical period of its development including the financial crisis Botzem addresses its evolution as an organization which produces accounting standards and whose efforts to be outside politics are inevitably and irredeemably political in nature. This book is essential reading for sociologists, political scientists, accountants and anyone else interested in the organization of global governance.' Michael Power, London School of Economics, UK The financial crisis underlines the relevance of accounting standards as much more than instrumental rules for corporate reporting. This important book outlines the accounting standards that embody societal and professional values and contribute to the distribution of financial benefits that put international harmonization of standards into the limelight. Sebastian Botzem reveals that international standards have emerged after decades of contest and political bargaining which resulted in closely aligned standards, voluntary consultation procedures and a network structure comprising actors mainly stemming from global auditing firms, regulators and international organizations.

Charities are becoming more highly regulated worldwide and yet they are subject to diverse, country-specific, financial reporting standards. New Zealand is a jurisdiction that has treated all sectors alike in its approach to the financial regulation of charities, while the UK has, for some time, separated the regulation of charities from other entities. This article

provides a comparison of the histories of the evolution of regulation for charity reporting in the UK and New Zealand. The current process of international harmonization in both jurisdictions is premised on the principle that accounting conceptual frameworks should not be jurisdiction-specific, but charities have proved to be an exception. We suggest in this study that this exception is attributed to different drivers resulting in regulatory distinctions in two otherwise similar jurisdictions. Without persisting in the maintenance of sector-neutrality, the inevitable divergence increases the load on preparers, attesters, and users and may lead to lower levels of accountability and transparency.
The European Union (EU) has emerged as a central actor in financial governance. Hardly any corner of

European financial markets remains untouched by EU rules, and key regulatory competences have been shifted from national authorities to supranational ones. At the same time, the global context has become ever more important for how and to what effect the EU regulates its financial markets. On the one hand, EU policymaking is embedded in global initiatives such as the Basel Committee on Banking Supervision. On the other hand, the EU now rivals the USA in its ability to shape global rules. Scholars and practitioners cannot make sense of EU rulemaking without studying its links to global financial governance, just as to understand how global initiatives evolve they have to appreciate the rise of the EU as a global regulatory force. This book charts and analyses this centrality of the European-global link in financial governance for the first time. Its chapters, written by experts in the specific fields, cover the whole breadth of financial markets. They range from banking, auditing and accounting to derivatives trading, money laundering, and tax governance. This book offers comprehensive coverage of: how and why global and European financial governance have co-evolved over time; how global and European rules, institutions, and actors are linked today; and what this implies for future global and European financial governance. It is essential reading for anyone who wants to understand the dynamics of either global or European financial regulation.

International Harmonization of Economic Regulation

The World Bank Legal Review
Banking Regulation and Supervision
Europe and the Governance of Global Finance
Banking On Basel
Regulating Capital
This book focuses on the legal challenges and opportunities for International Financial Institutions in the post-crisis world. It includes contributions from academics, practitioners and Bank staff. The contributions cover a broad array of issues, included governance reform and constitutional framework of IFIs, privileges and immunities, responsibility of

international organizations, issues related to fragile and conflict-affected states, climate finance, and the recent financial crisis. The book is organized in three main areas, namely (i) Law of International Organizations: Issues Confronting IFIs; (ii) Legal Obligations and Institutions of Developing Countries: Rethinking Approaches of IFIs; and (iii) International Finance and the Challenges of Regulatory Governance.
The book sets forth the economic rationale for international financial regulation and what role, if

any, international regulation can play in effectively managing systemic risk while providing accountability to all affected nations. The book suggests that a particular type of global governance structure is necessary to have more efficient regulation of the international financial system. With the advancing globalization of the world economy, domestic economic regulations are becoming more and more subject to efforts at international harmonization. This book presents an analysis of this worldwide phenomenon from

both a legal and a politico-economic perspective by focusing on (1) the backgrounds and objectives of international harmonization, (2) the negotiating processes involved, and (3) the impact of harmonization on domestic laws and their administration. International harmonization is discussed in a wide range of cases including trade-related regulations, technical standards and food safety standards, intellectual property rights, labor standards, competition law and policy, financial regulations, and regulations

concerning transnational economic crime. Drawing on a wide range of materials and applying a unified analytical framework based on theoretical as well as practical observations, the book surveys this much debated topic in a comprehensive and accessible way. It thus contributes to a better understanding of both the chances and the challenges of globalization and global governance today.
In recent years, the major industrialized nations have developed cooperative procedures for supervising

banks, harmonized their standards for bank capital requirements, and initiated cooperative understanding about securities market supervision. This book assesses what further coordination and harmonization in financial regulation will be required in an era of increased globalization. A Global Perspective
A Comparative Study of the UK and New Zealand

Big banks are capable of wreaking havoc on the global economy, and governments have often felt powerless to stop them. Regulators have responded by developing coordinated programs to handle banks, insurers, broker dealers, shadow banks and other businesses that can blow up in a crisis. This program began informally and undemocratically, and has developed into something much more organized, formalized and predictable, even though it has never been legally enforceable. David Zaring examines the realities of the current international financial system and concludes that in fact this is a well-ordered and functioning regulatory environment: the international financial

system enjoys a substantial degree of compliance, and operates predictably and harmoniously. As a result, perhaps this could serve as a paradigm for future global governance. Zaring explores three aspects of international financial regulation that can inform global governance: harmonization through rules, cooperation on enforcement and agreement on fundamental principles. It is often argued that international financial regulation has been substantially strengthened

over the past decades through the international harmonization of financial regulation. There are, however, still frequent outbreaks of painful financial crises, including the recent 2008 global financial crisis. This raises doubts about the conventional claims of the strengthening of international financial regulation. This book provides an in-depth political economy study of the adoptions in Japan, Korea and Taiwan of the 1988 Basel Capital Accord, the now so-called Basel I,

which has been at the center of international banking regulation over the past three decades, highlighting the domestic politics surrounding it. The book illustrates that, despite banks' formal compliance with the Accord in these countries, their compliance was often cosmetic due to extensive regulatory forbearance that allowed their real capital soundness to weaken. Domestic politics thus ultimately determined national implementations of the Accord. This book provides its novel

innovative study of the Accord through scores of interviews with bank regulators and analysis of various primary documents. It suggests that the actual effectiveness of international financial regulation relies ultimately on the domestic politics surrounding it. It implies as well that the past trend of international harmonization of financial regulation may be illusory, to at least some extent, in terms of its actual effectiveness. This book may interest not only

political economists but also scholars working on the intersection of law, economics and institutions. International Cooperation, Convergence and Harmonization of Pharmaceutical Regulations: A Global Perspective provides the current status of the complex and broad phenomenon of cooperation, convergence and harmonization in the pharmaceutical sector (Part I), thoroughly evaluates its added value and its critical

parameters and influencing factors (Part II) in order to recommend actions and measures to support the next steps for cooperation, convergence and harmonization (Part III). All of these recommendations in the book support the establishment of a better coordinated global pharmaceutical system which represents the best realistic alternative to fulfill the objective to establish a global coalition of regulators and to respond to an increased demand to

further cooperation in the pharmaceutical sector. This proposed framework, which leverages all of the ongoing positive cooperation initiatives and uses as foundations all of the numerous harmonization projects developed over the years, presents advantages for all stakeholders and would definitively have significant added value to the promotion and protection of global public health. The status of all major worldwide harmonization and cooperation initiatives (at bilateral, regional, and global levels) The value of cooperation in the pharmaceutical sector and the driving factors behind harmonization The proposition of a structure for the global pharmaceutical system and timely recommendations for enhancing international cooperation, as well as further discussion and policy changes in this area

The working hypothesis of international financial regulation is that it should be globally harmonized. This paper contends, to the contrary, that we should be wary about the efficacy of global harmonization, and in particular, harmonization of systemic risk measurement and regulation. The thesis is informed by what I consider two key lessons from the recent global financial crisis. The first lesson is that, when business strategies that internationally-harmonized regulation induces banks to follow go seriously awry, the adverse consequences will spread globally and not be

limited to one regulator's domain. The second lesson is that, innovations in financial technology that have been engines of prosperity across the globe also may contain the seeds of financial calamity with imprudent use and regulatory inattention. In addition, three kinds of uncertainty operate in this context: i) uncertainty regarding how best to define and measure systemic risk; (ii), dynamic uncertainty, that financial institutions respond to regulation in

unpredictable ways that tend to undermine regulatory effectiveness; and (iii) radical uncertainty, that we do not know all possible future states of the financial system and therefore cannot compute the probabilities of outcomes that would be necessary for informing rules regarding systemic risk measures. The uncertainty in the regulatory context, in conjunction with the lessons from the crisis, suggest that a value-added international regulatory

strategy would foster at least a modicum of diversity across national regulatory regimes, along with periodic updating of global standards. At the national level, they suggest adopting a dual-pronged regulatory approach that focuses regulators' attention on monitoring developments in short-term debt markets, leverage levels, and the impact of new financial products and services, as well as on promoting experimentation, to better inform regulatory decisionmaking.
