Histories of the civil rights movement have generally overlooked the battle to integrate the South's major industries. The paper industry, which has played an important role in the southern economy since the 1930s, has been particularly neglected. Using previously untapped legal records and oral history interviews, Timothy Minchin provides the first in-depth account of the struggle to integrate southern paper mills. Minchin describes how jobs in the southern paper industry were strictly segregated prior to the 1960s, with black workers confined to low-paying, menial positions. All work literally had a color: every job was racially designated and workers were represented by segregated local unions. Though black workers tried to protest workplace inequities through their unions, their efforts were largely ineffective until passage of the 1964 Civil Rights Act opened the way for scores of antidiscrimination lawsuits. Even then, however, resistance from executives and white workers ensured that the fight to integrate the paper industry was a long and difficult one.

The October 2019 Global Financial Stability Report (GFSR) identifies the current key vulnerabilities in the global financial system as the rise in corporate debt burdens, increasing holdings of riskier and more illiquid assets by institutional investors, and growing reliance on external borrowing by emerging and frontier market economies. The report proposes that policymakers mitigate these risks through stricter supervisory and macroprudential oversight of firms, strengthened oversight and disclosure for institutional investors, and the implementation of prudent sovereign debt management practices and frameworks for emerging and frontier market economies.

This is the fifth in a series of annuals from the National Bureau of Economic Research that are designed to stimulate research on problems in applied economics, to bring frontier theoretical developments to a wider audience, and to accelerate the interaction between analytical and empirical research in macroeconomics. Olivier Blanchard and Stanley Fischer are both Professors of Economics at MIT. Contributors: Ricardo CabaLero, Guiseppe Bertola. Andrew Caplin, Robert Hall. Gur Ofer. Abram Bergson, Martin Weitzman. Francesco Giavazzi, Marco Pagano. Allan Drazen, Martin Feldstein. Steven Davis, John Haltiwanger. Katharine Abraham, Robert Townsend. Mark Bilis. Andrew Oswald, Gary Hansen. With the proliferation of VHDL, the reference material also grew in the same order. Today there is good amount of scholarly literature including many books describing various aspects of VHDL. However, an indepth review of these books reveals a different story. Many of them have emerged simply as an improved version of the manual. While some of them deal with the system design issues, they lack appropriate exemplifying to illustrate the concepts. Others give large number of examples, but lack the VLSI system design issues. In nutshell, the fact which gone unnoticed by most of the books, is the growth of the VLSI is not merely due to the language itself, but more due to the development of large number of third party tools useful from the FPGA or semicustom ASIC realization point of view. In the proposed book, the authors have synergized the VHDL programming with appropriate EDA tools so as to present a full proof system design to the readers. In this book along with the VHDL coding issues, the simulation and synthesis with the various toolsets enables the potential reader to visualize the final design. The VHDL design codes have been synthesized using different third party tools such as Xilinx Web pack Ver.11, Modelsim PE, Leonardo Spectrum and Synplify Pro. Mixed flow illustrated by using the above mentioned tools presents an insight to optimize the design with reference to the spatial, temporal and power metrics.

Milner explores the similarities between the economic conditions of the 1920s and the 1970s, where both Western Europe and the U.S. had high unemploymet rates and sizeable agricultural and industrial overcapacity. She draws on evidence from six U.S. industries in the 1920s, six U.S. firms in the 1970s, and six French industries in the 1970s, and concludes that in the 1970s both nations had corporations with international market interests than they had in the 1920s. She believes that in modern industrial nations, the corporate sector plays an important role in policy determination, and that any move toward protectionism would be at the behest of large corporations with international interests. Work has always been central to the African American experience. Whether as slaves or freedmen, African Americans have struggled to gain economic opportunity. For Jobs and Freedom: Race and Labor in America since 1865 analyzes the position of African American workers in the U.S. economy and social order over the past century and a half. This comprehensive study focuses on black workers' efforts to gain equal rights in the workplace and deals extensively with organized labor's complex and tumultuous relationship with African Americans. Highlighting the problems and opportunities that have characterized efforts to build biracial unions and forge a strong labor-civil rights political coalition, it is an authoritative treatment on the subject of race and labor in modern America.
